Could it be because there is not much activity in the 800-900 mhz range in
most areas anymore ?
Hmmmmm ... I wonder .... ???

2. Pro 95 question about rebanding

Newsgroup: rec.radio.scanner
Date: 2006-01-01 14:59:20 UTC
From: Larry Copenhaver <lcopenha@naxs.com>
Message-ID: <16648$43b7ee83$d81841da$23008@NAXS.COM>
Source record: 10632

I just received a Radio Shack Pro 95 as a Christmas gift. I have really enjoyed listening over the past few days. Because I have been away from scanning for several years, I have been reading about scanning on the Internet over the past few days and have come across the issue of rebanding. My local Radio Shack employees do not seem to know anything about the rebanding issue so I am hoping to find information here. I have found that Radio Shack does not list this radio as being upgradable. My question is this: After rebanding in the near future, will this scanner be obsolete and useless? I live in rural Southwest Virginia.

Thanks for any info.
Larry

I am supposed to pick up cell, right? I can see people right in front of my house talking on cell phones when I scan, but I can't seem to get anything!

Is this normal?

The most accurate answer involves a question. Are your local Public service frequencies in the 800MHZ band?
If so the answer is maybe. Originally it was thought only the frequencies being moved to consolidate Nextels channels would be affected, but it turns out that even those frequencies in the unaffected portions of the 800MHZ band may be reassigned to new frequencies. This is because channel spacing for the new consolidated band may be adjusted for all users. If so that would affect everyone in the new public service bands.
The definitive answer has not been put out by the powers that be. The first channel moves will start around June of 2006.

Is there any scanners that will pick up ALL cell calls?

I am pretty much new to the scanning thing.

I was under the impression that scanners (modded) would pick up all cell and cordless calls. For a few more months anyway.

The amount of time that I used the Pro 95 so far has been very limited. It appears that using the search function, I have found frequencies in the 800 MHZ band only a couple of times. These have sounded like police transmissions, but I do not know for sure- at the time, I didn't know how to copy the frequencies into a bank so I have not been able to listen on any sort of regular basis. I am still trying to figure out the trunking feature of this radio. Almost everything that I have picked up has been in lower bands.

The Pro 95 will not be upgradable & IF your public service bands are Trunked
800 Mhz, you'll be S.O.L. But I wouldn't call it absolute & useless,
there's still
plenty of bandwidth to enjoy. You just won't be able to listen to trunked
800Mhz public service ferqs. It's still a keeper.

Hi,

This year, Santa brought be a Radio-Shack PRO-97 scanner. While this scanner is getting great reviews on the net, its user's manual assumes a far more knowledgeble user than myself. Is there a website, or article or book I could turn to to learn 1) scanning/radio basics and 2) a more gradual step-by-step explanation on how I can use my new scanner?

Thanks,

VS

Sheesh, if you want to listen to cell phone calls just go to your
local WalMart and stand in the lobby.

I think the best way to learn about the PRO-97 is to get good programming software. As you have probably found out, programming by hand is a pain.

The best I have found is Win97. Good user interface and you learn a lot about your scanner from using the program.

Check this link.

http://www.starrsoft.com/software/win97/default.asp

That's like saying "I bought this expensive plasma TV, and all I watch is stupid beer commercials".

There's so much more that 2006 can do! Search around the internet and learn about scanning a bit. You'll find there's a whole world waiting to be explored with that scanner.

Happy New Year.

I'll second that, even seasoned scanner users don't want to go back to
manually programming their radios after using a version of starrsoft
programming software for their radio. It not only makes programming
painless, it also helps you understand just how the scanner uses the
different programming aspects.

Go to the Radio Reference site and they will explain to you how it all
works. They may have the info on the police and fire in your area.

Radio Shack in your area will program the scanner for free for the first year of ownership.

NOMINATIONS FOR AARA/LEO I. MEYERSON, W0GFQ, AWARD FOR EXCELLENCE
IN AMATEUR RADIO OPEN

Nominations are now being accepted for the AARA, 2006, Leo I. Meyerson, W0GFQ, Award for Excellence in Amateur Radio. Send your nominations and supporting materials to the
Awards Committee, AARA, the American Amateur Radio Association, Box 440, Belgrade Lakes, Maine 04918, USA.

Leo Meyerson is a true radio pioneer. His World Radio Laboratories developed one of the
first single side band rigs, and their Galaxy radios were the first to use transistors hybrid with tubes. Leo flew around the world on a SAC aircraft with Arthur Collins with his 500 Watt Globe King AM transmitter to test AM compared with Art's KWS-1 1000 Watt SSB transmitter. SSB proved itself, and the race was on. Leo developed new methods for
manufacturing crystals during World War II which were adopted by all the crystal
manufacturers and earning him the Army "E" Award. Leo gave away part of his company
which then became Hy-Gain Electronics.

Leo is in the QCWA Hall of Fame and a Dayton Ham of the Year. Leo Installed Maine's QCWA Pine Tree Chapter, which he and Glenn Baxter, P.E., K1MAN, started together years ago. AARA and IARN are proud to offer this grand Award which honors Leo and his commitment to excellence in amateur radio.

AARA Membership K1MAN is legal! www.K1MAN.com
Support K1MAN, AARA and IARN - A modern alternative to the tired ARRL

Maybe it should go to Jim/N2EY for recognizing on Dec 10 that the FCC
does not license amateur radio.

Hi. I'm new to scanning myself and have found the best of learning is to tinker with the options, read the manual and get hold of a database with up-to-date frequencies.

Scanning for frequencies can be very hit and miss, so entering known frequencies into your scanner's channel memories will make huge difference. (It easy to scan a channel of frequencies rather than a band of frequencies!). By the way, how you organise your frequencies in the channel memories is down to personal taste, but I have mine organised by type of service and location.

Here in the UK this frequency database http://www.mckernan.it/proma/ is very useful.

Also, an antenna upgrade is often very worthwhile. In the 3 weeks since I've had my scanner I've purchased a centre loaded telescopic whip and a discone. The whip makes a noticable difference and the discone mounted in my loft brings in transmissions very load and very clear.

In general, the web is a very good source. There should be a yahoo group you can join for your area/state/country, where folks share frequencies and hints on using your particular model.

Hope this helps.

Rich

Neither do I (never having messed with one of those, I have not the slightest clue).

I use a BC200XLT here (its been my old friend through many a disaster and the occasional boring afternoon). I just wish there was a digital mod for it (unlikely as its 14 years old).

meanwhile.... back at headquarters....

the arrow most likely indicates scan direction....scan up thru channels
or down thru channels...at least on every one of the scanners I have
owned it was like that

I tried with Wine but since Win97 is not really "installed" but only unzipped Wine is missing dlls. I will try some other emulators though, the DVD version of Knoppix if I remember correctly has more emulators. My impression is that Win97 is a rather simple piece of code (to which, alas, we are not given access...) and that an emulator should make the hack. if not, however, are there any other decent applications out there?

45. IARN/AARA/K1MAN OPERATIONS FOR 2006 AND BEYOND

IARN/AARA/K1MAN OPERATIONS FOR 2006 AND BEYOND

INTERNATIONAL AMATEUR RADIO NETWORK (IARN)
EMERGENCY NCS INFORMATION I-VANS STILL NEEDED
IN SEVERAL AREAS - ACT TODAY!

IARN, the International Amateur Radio Network, is now a;so
activating in Mode 3 for Hurricane Beta. Traffic is being accepted
at IARNtraffic@aol.com. Please advise IARN with regard to your
amateur radio emergency traffic operations at 207 495 2215.
IARN is sponsored by AARA, the American Amateur Radio
Association. JoinToday.

OFFICIAL IARN OPERATING FREQUENCIES:

During a world wide communications emergency, I A R N may use SSB
on 14.275 MHz. as a primary control and logistics frequency; 14.127
MHz. LSB (Sel call KMAN) for AMTOR traffic; and 14.272 MHz. as a
secondary SSB frequency, all three for emergency and some health and
welfare traffic. Most health and welfare traffic should normally be
routed by E-Mail to:

IARNtraffic@aol.com

Please use the IARN message format as detailed below.

IARN EMERGENCY ACTIVATION MODES:

IARN emergency activations are classified in five different modes:

Mode 1 Full activation, continuous on air traffic/bulletins,
continuous NCS duty/bulletins.

Mode 2 Semi activation, intermittent on air traffic,
continuous NCS duty.

Mode 3 Full alert, continuous monitoring. Fully
activated for receiving health and welfare traffic at
IARNtraffic@aol.com. (Check 14.265 and 14.300 if
14.275 and 14.272 are not activated.)

Mode 4 Semi alert, general monitoring only.

Mode 5 No activation.

IARN INFORMATION BULLETINS:

I A R N operates all information bulletins on 14.275 MHz., 3.975 MHz., and 3.890 MHz., all plus or minus QRM, 16 or less, or 24 hours per day where necessary, for the most efficient dissemination of information of direct interest to the Radio Amateur. Check www.K1MAN.com for the latest published transmitting schedules (if any). On air information bulletins might not be scheduled at all during emergency activation periods.

OFFICIAL IARN MESSAGE FORMAT:

Please use the IARN message format suggested below. You will then receive an E-Mail response with an alpha-numeric traffic designator (or official IARN traffic "number.") Use this IARN traffic designator (added to line 2 of the IARN message format) to speed up references this message or request at all times and to help to drastically increase IARN message handling efficiency. Try to use IARN and ARRL traffic message codes (listed below) where possible.

Date time group: (added by IARN)
(1)Message designator: (added by IARN, see below):
(2)Priority: (see below)
(3)Originator's call (if any):
(4)Originator's return collect telephone number:
(5)Originator's E-Mail address:
(6)Message ARL code: (If blank, IARN will always assume ARL 19)
(7)Their name (who you are inquiring about or directing message to):
(8)Address line 1:
(9)Address line 2:
(10)Their telephone:
(11)Their E-mail:
(12)Signature (who is making the inquiry or author of the message):
(13)Signature's return collect telephone number:
(14)Signature's E-mail:
(15)Message send code: (added by IARN, see below)
(16)Message activity code: (added by IARN, see below)
(17)Message status: (added by IARN, see below):
(18) Message text (if any, use line 6, insread, if possible)
(19) Reply message: (use IARN and/or ARL codes where possible)

MESSAGE PRIORITY CODES (line 2):

1 = Routine priority; 2 = More Than Routine Priority; 3 = Expedite Priority; 4 = Very High Priority; 5 = Highest (Emergency) Priority.

MESSAGE ACTIVITY CODE: (line 16)

NA, date time group = no answer
B, date time group = Busy LMM, date time group = left message on machine.
LWM= left word to call back on machine
WNA, date time group = would not accept collect call
DMP, date time group = delivered message personally
DMM, date time group = delivered message on machine

TM, date time group = took a message
CMA, date time group = confirmed that message is still active
MK, date time group = message killed (everyone OK)
IO, date time group = inquiry from originator
IS, date time group = inquiry from signature and they confirmed that
the message is still active.
IN1 = one inquiry made about this message, IN2, means two inquiries,
etc.

MESSAGE STATUS CODES (line 17):

+ = case is open
# = everyone OK, case closed
C0 (CODE 0) NOTHING DONE YET
C1 CONTACT SUCCESSFUL
C2 ALREADY HEARD FROM PARTY, EVERYONE OK; CANCEL MESSAGE
C3 TELEPHONE BUSY SIGNAL; WILL TRY AGAIN
C4 TELEPHONE NO ANSWER; WILL TRY AGAIN
C5 TELEPHONE ATTEMPTS ABANDONED
C6 CONTACT ATTEMPTED BY POSTING
C7 CONTACT ATTEMPTED BY PUBLISHING IN THE NEWSPAPER
C8 CONTACT ATTEMPTED BY ANNOUNCEMENT OVER LOCAL RADIO
C9 PERSONAL CONTACT ATTEMPTED
C10 CONTACT ATTEMPTS ABANDONED
C11 NEEDS SERVICE
C12 SERVICED BACK
C13 SERVICED MESSAGE REFILED
C14 Message taken to affected area by a jump team operator

Example: Z3, HW3,C140828,II3 = Message Z3, Health and welfare with
Expedite priority, message has been taken to the affected area by a
jump team operator, and three inquiries made about this message.

I-VAN.....International Amateur Radio Network
low Cost Amateur Radio Emergency Communications Van

The International Amateur Radio Network Peace Corps Foundation is a
501(c)(3) non profit tax exempt public service organization organized
by the American Amateur Radio Association, AARA. For help in
financing your new I-VAN, contact us at 207 495 2215 today or write to
IARN, Box 440, Belgrade Lakes, Maine 04918.

You and a friend, or you and your local radio club or church, or just
you, can purchase a small and low cost second hand van. Build a
double decker rack to sleep two and a small radio table for an HF SSB
transceiver (minimum) and AMTOR (preferred) setup. A small
porta-potty (available at Wal-Mart in the sporting goods section) and
a small portable 110 volt AC/12 volt DC generator plus one or more
storage batteries and your I-VAN is almost ready. Add a DC cooler
for food, water, etc., sleeping bags, and some cooking items, etc. and
you are now fully ready for emergency deployment. Remember spare gas
and oil for the generator. You are a ham! Use your imagination and

ingenuity.

Head toward a hurricane/disaster zone. At some point you will meet cars heading out as they evacuate. Many will have cel phones and many of those will be non functional or overloaded because of the very real communications emergency that you are there to assist with. Now you park in some public place and solicit OUTGOING TRAFFIC from anybody who is in need.

The messages are best sent out on 20 meters during a communications emergency, or back to IARN headquarters or to your home base by AMTOR (preferred), SSB voice, or even CW for handling by ordinary hard line telephones.

During non emergency times, set up in a public place and offer to send Valentine, Christmas, or whatever messages the same way. This is great public exposure and good PR for amateur radio.

If you affiliate with IARN through a free International Amateur Radio Club Charter, you can use IARN's tax exempt status to get local merchants to donate, tax deductible, to finance the purchase of your low cost I-VAN (with their logos on the side). This is a very simple project; keep it that way!

Call IARN today for more information about IARN's ongoing I-VAN program at 207 495 2215.

73 and GL de K1MAN

K1MAN is legal. IARN is legal. AARA is legal and your modern alternative
to the outdated ARRL. Join AARA now and be a part of the glory of ham radio. Apply at www.k1man.com for a true ham radio future.

Source record: 10676

well, I checked again and I looks like I got my install problems mixed
up with another recently "wined" applications. Here is the error
message I got when I wined Win97:

Font metrics: 99.1% done
X Error of failed request: BadValue (integer parameter out of range
for operation)
Major opcode of failed request: 45 (X_OpenFont)
Value in failed request: 0x1400e9d
Serial number of failed request: 11383
Current serial number in output stream: 11384
Wine failed with return code 1

Any ideas as to how to go about fixing that one?

Thanks eveyone! You've been a big help. Didn't want to lose any more than I already have as far as monitoring.When our PD went to the EDACS it went with that Pro-voice(?) thing and as you know I can't hear a thing from them.All PD'S county wide have that! Was hoping they would forgo it since the hurricane what with all the different agencies from across the nation here helping out;but no,guess they equipped them with portable units.

Dear DanOfWA:
I too thought that the vertical arrow to the right of a BCD396T might be
an indicator of scan direction. However, scan direction has no meaning in a
digital trunked system, which is the only "game" in much of Michigan.
Thanks for the observation. Regards, Mac

It's amazing how so many (countless) buyers of Radio Shack scanners complain about "bad" experiences at Radio Shack ie...."they only want to sell cell phones in order to get that all important % of the sale"....."Radio Shack employees do not know anything about their scanners"...."why don't Radio Shack employees program my scanner or why don't Radio shack employees show me how to program my scanner" and on, and on, and on.....

Yet these people still walk out of the store with that Brand New Scanner they purchased KNOWING that they will have to program their scanners when they get their new scanner home.

When you but a car, does the car sales people teach you how to drive that car you purchased?

When you go to the library, does the librarian ask you if you can read?

The answers to these questions is Almost Always no, yet that does not stop people from completing these tasks. There is so much "How To" information on the WWW. that a search will not help you get started with the info needed to program your scanner. Not to mention the 10's of scanner groups (pro-97 yahoo group, pro-96 yahoo group, rec.radio.scaner group) where you can first search the archives, and then ask questions if need be. Then there are the scanner programs (Win96, Win97, scan cat etc..).

I think that new 1st time scanner owners get their scanner home, remove it from it's box, and expect to "Fire" the scanner up and to immediately hear the areas they want to scan. I know that few to almost none of the first time owners read the manual, with their scanner next to them, page by page to try to learn about their new scanner, and when they hit a subject they can't quite understand, they keep on reading (if that) instead of trying to understand with resources at hand, before going forward in the manual. And then there are the pages on the WWW with step by step reworking of the manual, easy for the first time owner to program their scanner.....but then they may not totally understand what/why they are doing these certain steps.

Instead of bitching and moaning about Radio Shack, use that energy and the resources givin' to you towards making your purchase of your Radio Shack scanner a Great, Worthwhile experience!! There must be a REASON WHY you purchased that Radio Shack scanner, even after reading all this "RAT SHACK " Crap.

Take the time to learn about your Great new Scanner and enjoy it instead of placing blame.

Happy & Healthy New Year to You & Yours !!!;

daviddd

Flights of F-15Es working Avon Park Bombing Range.
==

It is 9:15am EST (1415z).
I have been listening to "Lancer 61," a flight of two Seymour
Johnson F-15Es approaching Avon Park Bombing Range. They have just
informed Avon Ops on 292.2 that they will tank with "Sting," before
working the range.
Handoff sequence so far has been
346.25 Jax Ctr
273.55 Jax Ctr
269.30 Mia Ctr
349.00 Mia Ctr
238.90 Tanker "Sting 51"

LANCERs are talking air-air on 300.225.
LANCER 71 and 81 are also inbound. LANCER 61 is in comms with LANCER
81 on 283.7, the MacDill TDY Acft Ops freq.

LANCERs are also in comms with the Avon Park Range on 285.725.

I AM NOT a RS basher, BUT, I gave up on them for my scanner. Years ago when I got into this I was given an old well used Pro79. Worked great. Then when I heard the City was going to move to a Trunked 800 system I bought a Pro95. When the city started up the new system I with some help from the net learned how to set up the 95. I still used the 79 for about a year as they were simulating on both till they had all their radios replaced. Then about a year ago I decided to buy a 97 when I saw it. It was nice as it was smaller. Got it home, since I had set up many 95's for others now I figured it would be easy. Read the manual, things had changed a little but not much. Could not get it to work. It would not trunk. I re did it a couple times went through the manual a few times and made sure I followed the steps, same thing, it would not trunk. I finally went back to the store. No one there knew anything. They gave me my money back. I ordered a 246. Now that was a whole new game. Does not work anything like the RS. By reading the manual and a little help on line, within an hour I had it set up and working fine. I still go to RS to buy stuff as it's close to my house, but the "customer service" there is always a joke. I do like their 800 antenna's. I found my 246 worked a little better with one, so checked the stock on line, went to the store to buy another one. When I walked in they had re arranged the store since the last time I was there. A sales person asked me what I was after I told them, they looked at me with that deer in the headlights look. Asked me if it was a CB antenna. Finally she went to her computer, looked it up, said "yes it shows we have 3 or them in the store". Of course all 3 people working there had no idea where they were. After a lot of stupid questions, one of them gets out his cell phone to call someone else I would guess some manager to ask where these were. I was on my way to work, so I gave up and told tem forget it. I went to work, went on line and ordered one. The way the store by me is run I am always surprised it's still in business.

The way the store by me is run I am always surprised it's still in
> business.

Your RS sounds much like the one closest to me. I went in about a couple of years ago to buy a scanner and they informed me that "Radio Shack no longer sells scanners"!

I said to them: "You mean this store isn't selling scanners?" and they answered "NO! We'd love to sell them but RS has stopped selling them nationwide." I asked to see their catalog....which they willingly did. I quickly pointed out all the scanners and their response was "That's an old catalog". I checked it and pointed out that it was one month old. They explained "RS is really poor about keeping their catalogs up to date---that's probably a couple of years old, with a new cover"!

I went home and copied some pages off the RS website and took them back to them but even that didn't faze them. They offered the same explanation--slow upkeep on the website.

Finally I went to the next nearest RS--51 miles away! There, I bought a Pro-95. I took the new scanner to this local store.....only to be told that the other store must have had some misplaced on the back shelves because "Radio Shack stopped selling scanners about 2001"!

Since then, they've become more and more a toy store....radio control toys, games, etc. About a month ago I went in to get some small parts only to be told that they no longer stock "those items". They offered to "order" them for me but I had to have a minimum $ 30 order!!

I've given up on them.

Since rebanding only affects scanners receiving Mototola Type 2
systems on ~850 MHz, he can flash or not if all he's listening to is
EDACS.

69. TrunkPCR Update 0.7.183 Available

Newsgroup: rec.radio.scanner

Hi all,

You can now download TrunkPCR Version 0.7.183 from the website:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes a couple bugs:

Dec 09,2005 - -----: Changed Text Editing in MOTO Custom FreqPlan.
Dec 09,2005 - Added: Preliminary Settings for the PCR-1500.
Dec 09,2005 - Added: Show Known Freqs in Display Panel when in Freq mode.
Dec 12,2005 - Added: Frequency Error reporting from PCR.
Dec 13,2005 - -----: Refresh CC Activity when updating Custom/Extended
Freqplan.
Dec 13,2005 - -----: Text Validation in Custom/Extended Freqplans.
Dec 16,2005 - Fixed: Show Freq Centering with propper Mode/Filters.
Dec 23,2005 - Fixed: Reloading stored info when New Bank Inserted.
Dec 23,2005 - Fixed: Reloading stored info when New Channel Inserted.
Dec 23,2005 - Fixed: Adjusting stored info when Bank Deleted.
Dec 23,2005 - Fixed: Adjusting stored info when Channel Deleted.
Dec 23,2005 - Fixed: Setting Volume on StartUp.
Dec 23,2005 - Added: AutoSet Frequency Ranges.
Dec 23,2005 - -----: Editing of Duplex Frequency.
Dec 26,2005 - -----: BandScope Adjustments.
Dec 26,2005 - Fixed: Adjusting stored info when Freq Text Changed.
Dec 28,2005 - Fixed: BandScope Limit Pic Display.
Dec 29,2005 - Added: Export Found Freqs in Spectrum Sweep.
Dec 29,2005 - Fixed: Sweep Freq Knob Disabled when Sweeping.
Dec 30,2005 - Fixed: Sweep Freq Low/High Text Disabled when Sweeping.
Jan 02,2006 - Fixed: BandScope Disabled when Sweeping.
Version 0.7.183 Released 01/04/2006

Regards,
Jay

Let's say I have a scanner hooked up to my PC through a soundcard.
The scanner is tuned into a signal which is broadcasting a PCM.
If I save the audio to a .wav file is there some way I can decode the
audio ?
Will I need to use a hex editor to modify this file ? How can I turn
the
'fuzz' noise into something useable ?

Thanx

73. RS PRO-2054 scanner trunked question....newbie

Newsgroup: rec.radio.scanner
Date: 2006-01-05 15:47:45 UTC
From: "Pete C." <pcorrao@optonline.net>
Message-ID: <Sfavf.25602$SH2.21080@fe12.lga>
Source record: 10553

Hi,

Just got a Radio Shack PRO-2054 scanner and have a few questions: (first scanner)

I live in Suffolk County New York and my police use that new 800 mhz trunked system.

I programmed the scanner to recieve the freqs posted but here is the problem..

There are about 22 freqs that Suffolk uses for trunking. I receieve all of them fine, but I only get bits of conversations or I have to follow 3 or so conversations. I'm really only interested in the 3rd precinct in Suffolk County. Is there a special way to program the scanner to receive only certain precincts? Not all of of Suffolk County? Obviously I'm missing the last programming step - the order of the trunk or something...Any help would be appreciated..Thanks...Pete

This is the id info and the freq's

Suffolk County System

I have updated the following frequency lists for the Durham Region
Canada area:

- Durham East - Clarington
- Durham Central - Oshawa and Whitby
- Durham West - Ajax and Pickering
- Durham North - Brock and Scugog Townships
- Northumberland East and West - Cobourg and Port Hope
- Kawarth Lakes - Lindsay
- Windsor

I have also update the Amateur Radio, Rail and the main Radio page as
well.

Source record: 10556

it's WAY more complicated that you might think ......

before you even get to that " decoding " issue you
have to understand what you mean when you think PCM and of using any
of the " codecs " in windows and " digital " signal decoding (in
your computer) in general.

first the signal output of your scanner , from a discriminator tap
is a " analog " level signal. the audio output is " useless
so forget about using that . you have to change the
analog level " digital ' signal from your discriminator tap into a
" logic level " digital signal with a type of circuit like a
schmidt trigger or one of those (same thing) 2 or 4 level
(ie: flex type) " slicers " commonly found on the web.

2nd'ly .... then you have to access one of the " digital "
signal ports on your sound card ..... one of those commonly used by
a digital input to your computer sound card ..... like a cd drive
input / output ... or some other digital port found on many
types of sound cards (most modern cards have two or three
types of inputs) . the " analog " audio inputs aren't useful ,
especially at higher baud rates !

software can also use a serial (most commonly done) or a
parallel port instead of the digital port on a sound card .

anyway .. after you have the signal converted to digital and at
a digital level .... and then input into a desired port of your
computer (serial , parallel or sound card) ... then you must have
the software routines written to access the port , temp store the
signal , process the signal ...... it's pcm maybe, but it will
also need a codec or vocorder demodulation (restore the vocal
information from the compression scheme used by the sender) of the
digital pcm signal if it's voice , to retrieve the voice information
or .....if it's a digital " data " signal (flex, trunking control
data etc) ... you will need a routine to access the
storage registers and analyze the serial stream and decide /
decode the information present (if you can) and send out the
decoded info to the crt , storage or etc in a useful format !

not a simple and easy thing to do. you MUST have a LOT of knowledge
of the nature of the PCM signal (especially the codec chips the
sender used for digital voice compression , baud rate etc) and the
right knowledge or software in your computer to boot !

k.....

Put in only talkgroup 52976, or lock out all other talkgroups. Then
run the bank in closed mode.

<http://www.webdingers.com/scanner.html> is the whole patrol bureau
(precincts, all 4 countywide groups, command band, etc.)

Nice to hear from you krackula ! OK. I have a
data slicer interface I made a long time ago which
uses an OP amp. It's got a serial DB9 hookup with
the CTS pin. With it hooked up to my Alinco DJ-X10K
Wide Band Reciever, which has continuous receive
100Khz-2Ghz all mode, I'm basically getting 64Kbps without
many errors using the discriminator located in the
radios computer control banana jack's 3'rd pin which
is the very tip of a 3 conductor banana plug.
This plug is right next to the audio jack except it's
only slightly less in diameter and with 3 conductors
as opposed to 2 conductors for the audio jack .
With that all hooked up it works great !
Last night I tried hooking the audio jack directly to the
digital coaxial RCA jack on my Yamaha reciever.
I tuned in some freqs I thought would have
some PCM signals on it and did'nt hear a thing !
So since my stereo supports a raw PCM of varying
bitrates and samplerates, I thought it would work.
What if I hook up the CTS output of my slicer to the soundcard digital
or my stereo digital and then make
a call on my cordless ? Will this work using the
slicer and the alinco ?

Thanx

PS: I LOVE your posts Kracula ! :-)

Dear Mr. Klein:
That sounds logical. I have only used one system. I have managed -
some of the time - to get the radio to used different control channels. The
Michigan system does interesting things that includes some sort of
coordination between control channels in adjacent (land - political) areas.
Thanks. Hard to understand why the manual does not discuss completely
what one sees on the display.
Mac

Pete:

The Radio Shack PRO-2054 is not a TrunkTracker scanner. It is a low-end, stripped down, analog scanner, that does cover the 800MHz band, but without trunking. I don't even know what Radio Shack just introduced this scanner, as it is seriously lacking in the feature department!

Take it back while you still can. For the same money, you can buy the PRO-2052, that does trunking. Or for a little more, the PRO-2051, or PRO-2055 (on sale).

Patrick AFB Area Log - Thurs, 5 Jan 2005

NASA 916: T-38N #66-8382, Johnson Space Ctr, Houston TX
Lands NASA-KSC Shuttle Landing Facility.
[126.95, 128.55]

Mauler 15: S-3B Jacksonville NAS VS-32
Ops in Whiskey Area, to Whitehouse.
[267.5]

Stargate: E-8C JSTARS Mission Crew
Comms with Northrop Grumman Ground Station "Star 01."
[225.725]

Ascot 4660: C-130J, Royal Air Force, UK
Departs Patrick AFB to Curacao.
[118.4, 133.75, 132.65]
Pictures: P1050427, 428, 429.

Lancer 61, 71, 81: F-15E, Seymour Johnson AFB 4FW
Works at Avon Park Bombing Range w Ground FAC "Nighthawk," drops
GBU-12s, refuels with Sting 51, RTBs to MacDill, later RTBs to Seymour
Johnson AFB.
[307.25, 269.3, 349.0, 292.2, 285.725, 264.625, 238.9 (with Sting 51),
283.7 (with MacDill Ops).

PAT 534
Departs Patrick AFB.
[118.4, 133.75, 132.65, 124.8]]

JSTARS 03: E-8C, Robins AFB 116ACW
Departs Melbourne IAP. Later pattern work at Patrick AFB, then RTB
KMLB.
[118.2, 132.65, 124.8, 119.825, 133.75, 123.2 Grumman Ops]
Photos: P1050430 - 0434.

FANGs: F-15, Jacksonville IAP FL-ANG 125FW
ACM.
[393.8]

King 70: HC-130P #65-0970, Patrick AFB 920RQW 39RQS
Departs Patrick AFB. Air-air comms with King 77.
[133.75, 132.65, 311.0, 321.0]

King 77: C-130H #65-0977, Patrick AFB 920RQW 39RQS
Departs Patrick AFB to NAS Key West; comms with Base Ops, Rescue Ops;

also air-air comms with King 70.
[133.75, 132.65, 311.0, 321.0]
NOTE: Although Patrick's Base Ops/PTD still uses 372.2, slowly the aircraft are migrating to 311.0.

Dragnet Victor: E-3 AWACS Mission Crew, Tinker AFB 552ACW 966ACS
Comms with Oaky Sam.
[364.2]

Jolly 11: HH-60G Pave Hawk Helo, Patrick AFB 920RQW 301RQS
Local operations.
[269.375, 255.5]

CG 25433: Vessel, CG Sta Port Canaveral
Comms with CG Sta Port Canaveral, ops normal, position reports.
[157.15]

Army 26634: MH-60L, USA SOC "Black Daggers"
Comms with Patrick Dispatch.
[372.2]

Indy 61: KC-135R, Grisson ARB IN-ANG 434ARW
AAR comms with JSTARS 33; lands at Patrick AFB.
[327.6, 133.75]

JSTARS 33: E-8C #94-0285, Robins AFB 116ACW
AAR with Indy 61.
[327.6]

PAT 176: US Army Priority Air Transport
Area transition.
[127.475]

CG 2001: C-130J, Elizabeth City CGAS
Approaching PBI.
[128.3]

JU 466: C-9B, Norfolk VR-56 "Globemasters"
Lands, fuels at Patrick AFB; departs to Norfolk.
[133.75]

Berry 540: SW-4 Merlin, Contractor
Lands, departs Patrick AFB.
[133.75, 132.65, 124.8]

CAP Flight 822
Area transition.
[133.75]

Bandsaw Kilo: E-3 AWACS Mission Crew
Comms w Oaky Sam.
[364.2]

Sting 51: KC-135R, McConnell AFB KS-ANG 184ARW
AAR Comms with LANCER F-15Es, comms with MacDill TDY Ops.
[283.7, 238.9]

Gitmo 02: UC-12B, Guantanamo Bay, Cuba.
Lands Jacksonville NAS.
[310.2]

Hawk 83: F/A-18D, Beaufort VMFA-533.
Lands Patrick AFB.

Well,

Sad to say you are about 5 years to late to pick up any cordless, or
cellular stuff. The grand days of the 70's, 80's and 90's are gone
forever.

Now you will have to believe what your neighbors and others tell you
to your face instead of hearing the real truth when they are talking
privately on their cordless, or cellular phones.

We had to many corporate and government big shots get into trouble by
being overheard on their cellular phones, and then they were
whitemailed, or turned in to the police.

Once that happens law began to change quickly to protect the guilty.

Just one of those things that make you go hummmm.

Who deserves to be impeached and imprisoned the most?
A president receiving face from an adult willing female?

Or a president who lies to over four billion people
worldwide and then orders the attack and destruction
of hundreds of thousands of innocents, 1,600 American
GI'S killed and over 25,000 permanently disfigured?

Intelligent, non racially biased minds such as mine know the easy
answer to this question. Do you?

And so it goes

I have checked the web for info as to what may be causing the low audio output and it appears that it may be a capacitor in the audio circuit. Does anyone have a schematic or could possibly point me to the location of the audio circuitry related capacitors on this board?

Thanks in advance

Start tracing from the area where the volume and squelch controls are
connected.

89. K1MAN EDITORIAL - ED060106A - AN EDICT TO ALL WHO OPPOSE K1MAN/IARN/AARA

K1MAN EDITORIAL - ED060106A - AN EDICT TO ALL WHO OPPOSE
K1MAN/IARN/AARA

>From your one true leader at www.K1MAN.com

AARA, IARN, and K1MAN 2006 AGENDA

1. Get ND8V off the air.

2. Get a court decision on scheduled K1MAN and W1AW amateur
information bulletins.

3. Get Riley Hollingsworth out of the FCC and over to ARRL (as a W1AW
paid control operator) where he really belongs.)

4. Get ARRL criminally prosecuted for deleting the Goldwater Law from
their FCC Rule Book in 1990.

5. Ignore K3VR (poor little Brian).

Well it's 2006 and we have a busy slate this year here at AARA and IARN
Headquarters. Let's talk about this agenda in more detail:

1. Get ND8V off the air.

We hoped that ND8V would reform in 2005 but, as Dan says, you can't
fix stupid! Mike thinks that the Goldewater Law (making intentional
radio interference a felony - 2 years in federal prison and/or $10,000
file PER OCCURRENCE) has been repealed. How do you spell moron? Like
this: M O R O N! Hey Mike, Jack Gerritson was just convicted
under the Goldwater Law and faces 15 years in jail! There are enough
Felony Complaint Affidavits on file with the Justice Department (NOT
THE FCC!!!!!) against ND8V to put him in Leavenworth for the balance
of his life (Mike is age 50).

Now we are going to promote as many FCAs against ND8V as posible. Our
goal is 500 by December 31, 2006. To get a blank FCA form, send an
SASE to K1MAN, Box 440, Belgrade Lakes, Maine 04918. When you hear
ND8V intentionally interfering with another station as he does daily,
fill out the official one page FCA form, have it notarized, and send
it to: Justice Department, Washington, D.C. Fat Mikey is going
down, just like Garretson! Isn't it great to live in America?

2. Get a court decision on scheduled K1MAN and W1AW amateur
information bulletins.

As WB2OTK and K4NBC have observed, "If W1AW can schedule amateur information bulletins, K1MAN can as well." As Thomas Jefferson would have agreed, "This is self evident." But apparently not the "brain dead" FCC. Actually, not the whole FCC, just Riley Hollingsworth, who was sick on the day ther taught law at law school.

3. Get Riley Hollingsworth out of the FCC and over to ARRL (as a W1AW paid control operator) where he really belongs.

Actually, Hollingsworth will also be doing some serious jail time since he has encouraged numerous radio amateurs to "talk over" the K1MAN Bulletin Service, a clear criminal violation of the Goldwater Law.

4. Get ARRL criminally prosecuted for deleting the Goldwater Law from their FCC Rule Book in 1990.

This is a no brainer. The effect of deleting the Goldwater Law from the ARRL FCC Rule book has been to encourage hams to "talk over" the K1MAN bulletins; that's why such is a felony.

90. Re: digital PCM

Source record: 10569

oh goodness !!! hah ha hah a

I was afraid this would happen when I " lazily "
answered your first post . PCM can be quite a
complex subject with a whole bunch of possibilities
and variations .... kinda like the term " PCM "
it's self can actually be a " generic " or " generalized "
term that can refer many different digital schemes
and applications. there is basic " broadcast " PCM
encoding types that CD and broadcasters might use ....
and there are the plies of " propitiatory "PCM
encoding systems as well. I would take a thick book
to fully explain this subject. h h ah hha ha

that .. and to be honest , depending upon the
type of " encoding " the PCM signal you are interested in
used ..... decoding that signal requires significant
knowledge of the signal to decode.

first example ... an analog signal
(the voice ?) is " amplitude compressed "
as a type of processing and then digitized
in an industry standardized PCM format !
then the PCM digital signal is decoded
(d/a converter , reassembled analog parts " exactly "
as it was disassembled into bits with a a /d converter)
.. and THEN ..... the signal will be a voice again but probably
garbled or funky sounding and must be " decompressed "
in the same way and it was originally compressed to
make it sound right again.

2nd example, and most often used process these days. the first example
is a space hog and inefficient and wastes bandwidth and doesn't allow
for (for example) adding (interleaving between the bits)
additional audio channels to improve the bandwidth conservation.
this example compresses the digital stream to make it use less (
transmitted) bandwidth and eats less memory space (smaller files
with the space edited out of them) ! in this case a codec chip
or software routine does the work. the codec digitizes the analog
signal into a PCM stream (but not necessarily the same as the
PCM stream mentioned above) ..... and then the codec chip /
routine further processes the " digital " stream to make it more
compressed and use less bandwidth and / or file space etc .
a " codec " that processes human voice is called a speech
codec, voice codec or vocorder ! there are zillions of

" standard " audio codecs / vocorders in the industry ......
my win98 has 11 software decompression codecs showing alone !
(control panel, multimedia, devices , audio compression
codecs)

to " decode " a PCM voice signal , you must know enough about the
signal to use the " exact " method that was originally used to make
the signal digital. if it's just a straight compressed audio / pcm
signal (for example) .... you might use the standard MS
PCM converter codec to retrieve the voice portion of the signal and
use the proper decompression (voice expander, or equalizer etc
in any of the advanced audio lab programs , for example)
on the resulting signal to make it sound right . (not like a monster
or gibberish etc)

on the other hand (and most likely) the signal uses a codec
chip / software routine to digitize then compress the
digital voice ... then YOU MUST use exactly the same codec
chip / software program to decompress the digital stream and
reconstruct the digitized voice back to analog ! THAT and it gets
MUCH worse .... in the communications world .... nearly
ALL different companies use secret proprietary , chip embedded ,codecs
that MUST have the same company made proprietary chip to decode
the digital stream. with either of these , you must be spot on to get
anything out at all. it is VERY unlikely you can decode PCM
communications signals , like you would get with a scanner, unless
they are standardized apco25 (which are all public encoding /
compatible) or unless you own a chip to decode them with ! to get
some motorola digital business radios decoded (for example)
.. some people buy a HT of the same digital type (and older model
with as little vlsi / smt as possible) and feed the digital signal
from their scanner into the chip of that ht to " hear " the
digitalized audio signal on the speaker of the HT !

uggghhhhh .. all this and honestly I haven't done a very good job
explaining it and have left out tons of additional issues and
PCM applications to boot ! ah ah ah ahaha

to decode a signal , you must know " exactly " what it is
and understand how it was made. you must use the same process
, that encoded it , to decode it.

that , or you must have a scanner and computer combination that runs
software (as the government uses , like some of the watkins johnson
" black box " set-ups) that will analyze the digital stream and
tell you what it is and how it was made. then the program will
decompress the digital stream (automatically trying dozens of
codecs until one starts working) and then decode the stream back to
audio for you. (about $60,000 for this setup , governments only)

when you tune around with a scanner and hit several digital voice
signals .... most likely NONE of them can be decoded

using the same codec / equipment setup. especially in the radio communications world. each and every one of them will probably be different.

haha hah a . hope this helps a little more ..... it's not surprising that you couldn't get any output from the setup you tried as you can see , it's a complicated digital world out there. still doesn't hurt to try new things and discover interesting things for yourself too. try playing with an older (el cheapo) digital cordless phone. some of the older , cheaper , models used plain old compression / pcm encoding / decoding ! both the handset and the base unit have a common digital codec chip ! this chip maybe just a plain pcm encoding codec or if newer ... a encoding / compression codec chip ! get a small collection of older (and now inexpensive) digital HTs of different companies from ebay. try accessing the codec chips and using the output from your scanner (tuned to one of the signals of interest) and poke and probe around and see what you can do, see how many different HTs (for example) from the same company / maker can be made to decode each other .... try signals off the air , with your scanner , into your collection of codec chips to see if any of them happen to decode some of the received signals. if you are really serious ... lots of possibilities await ..... and at the least you will have " phun " and gain a lot of experience / knowledge in the process !

k..............

I own a prototyping breadboard and it sounds to me like
I can mount a 'chip' on this breadboard , hook the output
of the discriminator tap of my wideband receiver, give it
some power , and hook a small audio amp and speaker to the
output of the 'chip' to decode / demodulate the signal .
If this is the case I can think of some really cool sh*t !!!
One thing I would do is mount more than one chip
and use a switch to select the 'codec' to listen to .
But... I would rather use the computer for this
and I'm running Fedora Core 4 and the computer has 1.5GB 400Mhz DDR RAM
and 200GB of harddrive space. Not to mention a SBLive 5.1 card with
spdif inputs ! So I can run basically any audio editor just fine and
the
com ports are really easy to access. One could use the /dev/tty entries
to view in real time (cat /dev/tty0, 1, 2....) what activity is on any
given com port !
I also know quite a lot of C++. I'm sure a program can be written
to continuously cycle through codecs as the program also monitors the
selected tty device . Also patterns can be detected and codes
can be broken . I'm really starting to see that computers are excellent
signal analysers and are also great for picking things apart such as
codecs ! As far as continuous codec cycling goes, I would maybe
want to do it like this if there are any programmers watching our
thread :

Pseudo Code :

```
do {
bool codec = false ;
create temp buffer ;
get data from com port ;
store data in buffer ;
for(int i = 0 ; i < 1; i++)
codec = compareCodecs(buffer) //compareCodecs returns
true/false
//it
also contains as many codecs
//as
possible !!!
// when
codec is equal to true then exit the do while
loop and use the selected codec !

} while codec = false
```

So that sums up my ideas for now...

thanx

I think you have a great attitude towards dealing with trying to get
digital signals decoded . most codec chips have so many leads
(40 lead square pak vlsi as an example) that it gets complicated
(read that lots of work) to mount them separately. thats why most
people use them already mounted in a working circuit , like a
HT or older under dash model. the breadboard thought is still
necessary , tho, as you'll need it for external patching . cross
patching of all the equipment and setting up of the interfacing
circuitry.

>want to do it like this if there are any programmers watching our
>thread :
>
>

actually .... this part isn't as bleak as it sounds. all of the
so called " public codecs " ..... especially the ones that have
MS software routines ... and even the private codes (proprietary)
use an identifier on their digital stream . right behind their

" sync " stream marker , to identify what they are , for convenience of use. this ID code element helps their chips accept or reject the code stream (it's why you get " nothing " if it's not the proper codec decoding the stream .. it doesn't even try if it's not the proper ID sequence) . there are digital audio analyzers available on ebay (test equipment) , from time to time , that are capable of capturing and displaying all codec and pcm information on signals.

(hint :
http://cgi.ebay.com/Wandel-Goltermann-PCM-4-ANALYZER-BN-984-03-Messplatz_W0QQitemZ7576970409QQcategoryZ97139QQrdZ1QQcmdZViewItem
http://cgi.ebay.com/TTC-Acterna-T-BERD-224-PCM-Analyzer-w-Full-Keyboard_W0QQitemZ7578284459QQcategoryZ97143QQssPageNameZWDVWQQrdZ1QQcmdZViewItem
and many others .....)

so Identifying and analyzing digital data streams for so called " public codes " isn't too far out of reach .... just a little work and you can get there. you can definitely " can do it ! "

the " rub " comes in on " communications " type digital audio streams in equipment (for example) that uses proprietary codec embedded chip encoding and decoding ! with " these " you'd only have to spend some time to actually take apart representative
" streams ' and learn their stream code sequence and then use your software writing approach to write a codec routine to decode the selected stream. you can look at the stream for the standardized (and almost certainly get the script from C++ and programming resources on the web) ID codes and use that knowledge to identify the similar information in private codecs. additional good news here is that there aren't " all that " many private codecs ..... probably only a handful currently (of the most popular and most often used ones) and once you have dealt with those .... you'll have it mostly sorted out.

this is where the government has others beat out , as they get a copy of the codecs as the companies make them ..... (explained as needed for nnational security applications) and they don't have to do so much work to sort them all out. they supply this information to places like watkins johnson to help them upgrade their black box surveillance software programs more easily. h ahhahaaha

all of this explains why the scanner makers haven't made digital capable scanners that do more then apco25 , as they easily could make scanners that get almost everything !

in the communications world ... little or nothing uses the public (broadcast ?) codecs. maybe some early cordless phones etc. pretty much all 2 way radio makers use their own private " proprietary ' codecs. because they are proprietary , scanner makers can't use them without paying or permission from the companies

making them. none of these companies wan't people listening to their radios and none of them want to give the competition any advantage on their products. good working codecs are worth a LOT of money (and are ALWAYS patented). apco25 is the exception because it uses a common publicly released standard codec for all common users to have (so all the equipment will be compatible)

you " certainly " can make yourself a setup to decode and listen to (non encrypted .....) digital voice communications signals. you could use it for your own applications but NOT be able to release it publically or sell it (because all the private codecs are patented). you could become the first modern " digital scanning hero " by releasing the information / codecs through some Russian hacker site , for example. you could ..... BUT ... think about this ..... for sure you aren't the first to want to bust modern commo codecs. MANY others have tread the same path before you. the Russians , especially , have " been there ... done that " and even " THEY " haven't released the equipment and codec info to the public.

if you mess with big communications companies' patented private codecs you potentially screw with their profit margins and company income bottom lines. the US Government isn't going to let you mess with big US businesses' incomes and live to tell about it, so to speak ! (remember what happened to Kevin Mitnick when his hacking threatened cellphone business ?? h ahah ah ah aha)
take care what you do (and whom you tell about it) and don't shoot yourself in the foot ! 23 hours a day in your Federal SHU cell isn't going to be much phun !!!

k.....

I didn't necessarily mean "how" one could detect if a R.S. product will be discontinued but "why" R.S. would discontinue such an excellent scanner as the Pro-2052. I'm missing some obscure fact as to why the R.S. execs. would chose to axe this particular scanner when they came out with such inferior scanners that desperately need to be axed.

I have another question, the two times I tried to order the computer program that would allow me to control the scanner from my computer met with comments like: They discontinued that, or We can't get it in this store. Anyone know the "real" story of the advertised computer program that some, including myself, couldn't get ?

H.J. (still programming my scanner with one finger instead of ten)

they never came with antennas that i know of, you had to build them
yourself. the plans for the asu including circuit board and parts list are
in the manual, they are simple things that you should be able to find at any
radio parts store... assuming you can find one of those today.

They did come with the needed switching diodes which were a weak point in
the design and there was later a suggested replacement.

I've got one - defective - I think I popped the switching diodes by accidentally transmitting thru it. I know I've got the dox 'somewhere' - just gotta dig 'em out.

From memory, the four pin cable from the main unit sends a rotating DC bias to each of the switching diodes in the box. There's a diode at the antenna base too, by design. I haven't opened the box yet, but the diode at the antenna base is ITT BA 282 Cathode (bar) to coax shield.

If/when I find the dox, I'll get back to you. Let me know how you progress.

They sure seem to be :
http://members.aol.com/homingin/DSEfix.html
The ones in the box switch one of the antennas at a time to the RDF, and
the ones at the base of the antennas groung the out-of-use antennas.

Hello all,

I am interested in getting a simple analog rig for home. I have used a friends ICOM IC-R71A quite a bit and really enjoy just dinking around, searching frequencies for something interesting. I'd love to pick up a used R71A, but there don't seem to be to many around. I am also concerned about longevity, parts, etc. Is there a new unit that would be good for a starter kit (read not too expensive) that is as simple to operate as the R71A? Should I just not be concerned and pick up a used R71A? Also, can someone recommend a good (easy to understand) beginners book that deals with antennae (long-wire, directional, etc.) and tech. behind pulling in traffic?

Thank you very much for any information that you can provide, and I appreciate your patience.

V/r
Egon

Hello all,

I am interested in getting a simple analog rig for home. I have used a friends ICOM IC-R71A quite a bit and really enjoy just dinking around, searching frequencies for something interesting. I'd love to pick up a used R71A, but there don't seem to be to many around. I am also concerned about longevity, parts, etc. Is there a new unit that would be good for a starter kit (read not too expensive) that is as simple to operate as the R71A? Should I just not be concerned and pick up a used R71A? Also, can someone recommend a good (easy to understand) beginners book that deals with antennae (long-wire, directional, etc.) and tech. behind pulling in traffic?

Thank you very much for any information that you can provide, and I appreciate your patience.

V/r
Egon

schematic of what you have (draw one if necessary), will tell you how
to make what you need.

The antennas are usually 1/2 wave dipoles at whatever frequency the
unit will be used. Copperweld or wire hangers make decent antennas,
although I prefer stainless control wire of the type used on model
planes.

RS's rationale isn't how good a scanner is, it's how profitable it is.

> I'm missing some obscure fact as to why the R.S. execs. would
>chose to axe this particular scanner when they came out with such inferior
>scanners that desperately need to be axed.

The "inferior" ones bring in profit - the axed ones don't. It's not
obscure at all.

>I have another question, the two times I tried to order the computer program
>that would allow me to control the scanner from my computer met with
>comments like: They discontinued that, or We can't get it in this store.
>Anyone know the "real" story of the advertised computer program that some,
>including myself, couldn't get ?

Which program are you talking about? The only one RS ever sold (that
I know of) is discontinued, and it wasn't all that good to begin with.
Get Don Starr's program for whichever scanner you have, and you won't
be sorry. (I have nothing to do with either RS or Don, but I write
software and I recognize good stuff when I see [and use] it.)

Well, i thought if you need information why not get as much as you can in one go?
Seems logical to me. And it's not like i'm posting some dribble, bs, flame.
I am getting some good replies so far.

Gary

Thanks Al, but i'm not too good at working out stuff like that, if it's all laid out in kit form i'm ok. and i thought that seeing these things are reasonably critical (antenna units) that if i tried another design i may be waisting my time and parts on something that isn't suited. Thanks for your input.

APRSPoint 2.2 is released. New features include,

1. Added TNC data view and TNC data log,
2. Enabled auto connect for AGW packet engine,
3. Fixed a bug handling weather station data,
4. Ability to load a default map view at startup,
5. Restore TNC settings when program exits.

and many more. The holiday sale is also extended for 2 more days.
Visist http://www.aprspoint.com for details. Thanks.

Dear "no one"

You sure have an unusual name.

Please try the following with your 2096: Use the control channel for
the Owosso system. It is 868.9375 MHz. In other words, do not use the
Genesee control channel on 868.8875 MHz. The Owosso system uses only one
transmitter thus avoiding the multiple-transmitter-multipath of the Genesee
system. The down side is that the Owosso system only has the Genesee
dispatch circuits and systems west, north, and south of Genesee.

It will be interesting to learn what quality of signals you receive by
using the Owosso system.

Regards, Mac

Thanks!

I just got off the phone with Radio Shack and There answer is that There
is something Wrong with The System.

I say That this is UNTRUE.
If there was a problem with the System, All the Police Cars and
Emergency vehicles who are trying to Save lives would be hampered .
also If it Was true , I am Sure That my LOCAL agencies Would DROP the
system and go Back to WhaTEVER works.

It sounds to me that is is a DESIGN problem with the PRO 2096, and
Radioshack needs to Put out an UPDATE to the Firmware or a Complete RECALL !

A call to my LOCAL radio shack came up with more info. The manager
says That all the pro2096 she has sold, Every person is complaing of
this problem, They are issuing lots of REFUNDS !

By the Way, Tech at fort worth Says the RADIO/SCANNER (PRO 2096) is
Still an ACTIVE product ! Even tho there is no mention of it on Radio
Shacks Website ! As we all Know, The Webmaster At Radio Shack.com Needs
to View His or HER work and Make sure it is Correct !

Wow, 29 years bootlegging on ham and no FCC check? I think that's a
new record!! There's been a couple of guys on a Militia/Patriot
net every night on 3.8-0 mHz LSB for over 3 years now with phony callsigns
who still ain't got caught or even raised a red flag with either FCC or
OHS.
but if you went along for that long and got off with a slap on da
wrist, then woo-woo on you. (bet you were a good customer at the ham store
also eh? Did the buffoons sel you a big amplifier too with no license
check? prolly did..)

You are correct that Don Starr writes excellent software, ie; Win95, Win96, Win97, etc. Unfortunately he doesn't write software for the PRO-2052. All of Don's software is for Radio Shack (GRE manufactured) radios. The Radio Shack PRO-2052 is manufactured for them by Uniden.

Some of the software that supports the PRO-2052 is:

ScanPro2052
ScanControl
ScanCat Lite Plus

There is a free program for the Pro-2052
I use it alot..and it may not have some of the extra stuff that the
other program mentioned has but being free and it does work quite well
I have been using it for a while and it works great

it says it is for win9x but I imagine it would work on XP as well

you can find it at

http://www.qsl.net/kd5lmy/software1.htm

The sole determination of existing, creation or proof of business relationship shall be determined a positive statement of creating said relationship in the content of the email originating FROM my computer and NOT that of the other parties computer, system or network.

==========
NOTICE TO BULK/COMMERICAL E-MAILERS:
==========

Pursuant to US Code, Title 47, Chapter 5, Subchapter II, p.227, any and all unsolicited commercial E-mail sent to this address is subject to a download and archival fee in the amount of $500 US.

Anyone who sends unsolicited commercial e-mail to this account will be charged a $500 processing fee. Viewing this mail will be considered official notification and acceptance of these conditions.

Failure to abide by this will result in legal action.

RCW 19.190.020
Unpermitted or misleading electronic mail -- Prohibition.
(1) No person may initiate the transmission, conspire with another to initiate the transmission, or assist the transmission, of a commercial electronic mail message from a computer located in Washington or to an electronic mail address that the sender knows, or has reason to know, is held by a Washington resident that:
(a) Uses a third party's internet domain name without permission of the third party, or otherwise misrepresents or obscures any information in identifying the point of origin or the transmission path of a commercial electronic mail message; or
(b) Contains false or misleading information in the subject line.

RCW 19.190.040
Violations -- Damages.
(1) Damages to the recipient of a commercial electronic mail message sent in violation of this chapter are five hundred dollars, or actual damages, whichever is greater.

Technically it's not free. It's advertised as shareware, meaning that it's free to try, but if you like it, and continue to use it, your supposed to buy it. He's only asking for $14.95 which is very reasonable.

What's interesting is this software looks exactly like ScanPro2052!

It was truly unfortunate Kevin Mitnick was
imprisoned for soooooo long without a trial . I know all the
fake stories and bullsh*t that surrounded the
whole issue . The truth is the government hates people
like us and it shows ! It shows just about everywhere there
is government sponsorship or any government institution in
this country(USA) . Like schools because they don't teach kids
about much except to comply with government standards
which are lower every year . Look at the test scores
(reading, writing, arithmetic) LOOOOOK ! Lower and lower
they go ! Now it is very obvious that our government
we elected is purposely dumbing us down . It's already working
if you look carefully ! Hint : Go to your nearest CompUSA or something
and ask questions . They DON'T KNOW JACK ! LOL
It's making me sick so I must post this now ....

Have a nice day !

well,
there is some truth and some conjecture here.

the truth is: those in power are afraid of anyone with real skills.
another truth (and I know this one better than most) Kevin Mitnick brought a lot of this on himself (and he even admitted that when he did an interview one of the many news programs that he has frequented over the last few years). He learned his lesson though and now makes a surprising amount of money as a computer security consultant....

Here is another truth: the skills base that created the internet in the first place is either now illegal in the US or has moved out of country because opportunities are more plentiful elsewhere. Personally, I think its time those in power got a clue and started thinking about what is best for US, the people. but then, that is just my opinion.

If you're talking about the MPSCS, it's a Motorola system, so there's
only 1 control channel on the air at a time from any site. Multipath
isn't caused by multiple transmitters, it's caused by signal
reflections.

Good post n7zzt !
I'm a ham operator myself (technician class) and I really love talking
on simplex to my buddys on 147.555 ;-)
I'm running a Kenwood G707A dual band mobile and a ADI AT-600
dual band HT with dual simultanius receive . For listening purposes I
use
the Alinco DJX10K which is a wideband reciever (100Khz to 1999.9999Mhz
ALL MODE).
In any case this is really starting to become a good thread with me,
you, and Krackula :-) !
I was thinking a bit about decoding data(in general) from the airwaves.
As I was playing arround with a Hex Editor, I loaded an MP3 into it .
I cut a portion of data inbetween and pasted that into another instance
of
the Hex Editor and saved it as test.mp3 . Much to my amazement when I
opened test.mp3 it actually played a part of the song ! This was VERY
enlightening because it reminded me of the network dumping program
called Ethereal and the way Ethereal could dump its output as Hex .
Looks like one could do as follows :

```
char myData[] = { 0x12, 0x78, 0xa7, 0x90, etc etc etc etc
etc.............. } ;
```

It looks as though i could store a whole MP3 into myData !!!
Well just a thought .....

73's for now !

Well, the index came across... There are way too many that I would be interested in. I would guess probably about 25% to 30% of what you originally posted... Unfortunately, if my provider didn't get your postings the first time around, they probably won't show up the second time around either. Very disappointing... I can only guess that you got incorrectly filtered out by one of their SPAM filters ...

I will try to see if I can narrow it down to maybe just a few and see if they come across this time. I did file a complaint that they weren't making it through...

yea ..... 70's ish for sure ..... PLUS ..... all the zillions
of gang bangers have discovered CB and NOW if you mention
where you are or radio for help from some roadside breakdown .....
the bangers are the first to show up to offer their " special "
type of aid !

on the up side .. if you need some crack, a shady lady or just
want to hear different gangs threaten to shoot each other ......
then CB is the place to be ! cb = call'in bangers ....

149. Pro 97

Newsgroup: rec.radio.scanner
Date: 2006-01-10 18:48:07 UTC
From: dave <dave1@juno.com>
Message-ID: <1136918887.792483.309430@f14g2000cwb.googlegroups.com>
Source record: 10479

I have just purchased a Radio Shack PRO 97, and my only goal is to
program the local Fire Dept.
They are now an 800 trunking system. I have all of the 800
frequencies that I need, and I have a list of the 5 digit "Codes"
that I need to monitor them in the 'closed' mode, but I'm not able to
make this happen.
I'm pulling my hair out. I called the 900 number for RS and they said
"oh yeah,,, no problem, the instructions are on page 74.

Why is this so difficult? Are all scanners this hard to program?

Dave

As I re read my post, let me be a little more clear.

I have my scanner programmed, and I can listen to all of the City PD
and County Sheriff, along with snow plows and city maintance crews.

All that I want to listen to is Fire calls. (I'm a ff. and I like
knowing what is going on when it is busy).
The book tells me that I can plug the code in and only listen to what I
want to hear but I'll be darned if I can get it to do it.

When you are listening to these, does the "talk group" #'s come up with each call? Do you have the control Channel / channels programmed? Are you able to follow the conversations without the scanner stopping on the control channel? If it follows the conversations, is not stopping on the control and you are seeing the Talk groups, all this is assuming you are listening to a Motorola system, then yes all you need to do is change the bank to closed mode. The 97 I had would not work, but from the instructions it looks almost the same as the 95. Look in the manual under Open and closed" mode. You "may" be almost there. You also may only have loaded the frequencies they use, but may not have the scanner set up to trunk, so it's just stopping on the frequency it finds traffic on. It does take a little to get used to, when our system went to the 800 it took me a while to figure out the way to get the 95 to trunk. If someone else here that knows the 97 better than me does not make this any easier, try the Radio Reference site. They have some great info to help you understand how Trunking works and how to get to where you hear only what you want.

Source record: 10482

Your question: When you are listening to these, does the "talk group"
#'s come up with each call?
Answer: I'm pretty sure that they do. On the bottom line where it
says "ID" then it has 4 numbers. Nowhere do the fleet ID's show
up. Even when I typed in the ID's they converted to another 4 digit
number.

Your question: Are you able to follow the conversations without the
scanner stopping on the control channel?
Answer: It is difficult to follow the conversation since the
transmissions don't stay on the same channel. If they weren't
interrupted with other conversations, I'm sure that I could follow
them. The control channel only comes on when I hit "Manual".
Otherwise, it is quiet.

I have the bank on closed, but I'm picking up conversations from the
cops, and I didn't insert their ID's. This is where I'm confused.

Sounds like you are on a different system than we use here. I know how to
use the Motorola Type II because that's what we use. There are no Fleet ID's
so it sounds like you are on a different system. Hopefully someone here who
knows will be of more help. In the mean time it would help if you post what
city you are trying to listen to. There may be others here who also live
there. Also did you check the Radio Reference page, and see if it has the
info for your city/ county? If it does it may be able to explain it to you.
It (RR) may at least tell you which type of trunked system you are trying to
listen to. There are a few different types of trunked systems and the
scanner has to be set up for them differently. It can be frustrating. I know
when they were switching here I had a hell of a time trying to just do it
with the manual on my old 95. Some help from the net finally gave me what I
needed, but unfortunately I only know how to use the one system. Hopefully
someone here can show you what needs done. I'm sure it's a simple fix. Try
posting to alt.radio.scanner also. I'm sure someone will know how to set it
up once they know what kind of system you are trying to scan.

Hi Frank!

"If it works don't fix it!", as the saying goes. However, the PRO-97 has several added luxuries such as alpha tags, better audio, a super back light, computer programmable, Signal Stalker II, bigger display, bigger keypad & buttons, etc. Oh yea, it's on sale too ($50.00 off!).

You could easily pay for half of it, or more, by selling the PRO-43 which is still sought after. Something to think about.

159. Re: Radio Shack Pro-96

Newsgroup: rec.radio.scanner
Date: 2006-01-11 04:53:50 UTC
From: "J. Mc Laughlin" <jcm@power-net.net>
Message-ID: <11s93o3cg95nd0@corp.supernews.com>
Source record: 10489

Dear Mr.Klein:

It is not the control channel that is the problem. It may be sent from only one transmitter (and thus suffer only the old-fashion multipath type of distortion). In other words, it appears that the control channel is decoded successfully. This could be due to the existence of a robust type of coding that combats old-fashion multipath type of distortion.

However, when mobile stations are sent by the control channel off to one of the allocated frequencies, problems seem to occur with the digitally encoded voice signals. Since systems that use a total of one transmitting site do not appear to suffer and systems that use multiple transmitting sites do suffer, one hypothecates reasons.

A form of multipath distortion exists that is due to the use of multiple, well spaced transmitters that are transmitting at the same time. That is the type of distortion I called "multiple-transmitter-multipath."

One might guess that if one is close to one of the transmitters (of a multiple transmitter system) then one would not have a problems because the near transmitter's emissions would dominate. I have not tested this hypothesis.

However, when one is receiving multiple transmissions of approximately equal amplitude but transmissions that have encountered different delays, then one expects to see what looks like multipath. An enhanced receiver can remove the problem at a cost that includes slight delay. A "low cost" receiver without enhanced processing may have a hard time decoding signals that have been contaminated by multipath of any kind.

When listening to a one transmitter site (Owosso), my BCD396T receives almost all voice signals well most of the time. When listening to a system (APCO25) that uses multiple transmitting sites (Genesee), my BCD396T produces distorted audio much of the time. At my location, the signal from the control channel of the multiple transmitter system is somewhat stronger than the signal from the one transmitter system.

Even back in the RTTY days with each "bit" being 20 to 22 mS long, multipath was capable of distorting signals. The much higher data rates of the digital system in question makes the decoding-in-the-presence-of-one-type-or-another-multipath difficult.

In short: multipath can be caused by means other than signal reflections and the present "low cost" receivers seem not to contain multipath resistance processing.

Regards, Mac

Dear "no one"

Thank you for describing your experience.

It may well be that you are too far away from the Owosso system for your receiver to receive a useful signal. I am on the western edge of Genesee County and I have no difficulty receiving both systems.

Regards, Mac

Before the Board of Licensure for Professional Engineers
State of Maine

In the matter of:

Brian L. Crow, K3VR, Complainant # E05 003

vs.

Glenn A. Baxter, P.E., K1MAN, Respondent

Registered Professional Engineer, By Examination, in Illinois

and

Registered Professional Engineer, by Reciprocity, in Maine

Amateur Radio Call Sign K1MAN

MOTION TO DISMISS

or

REQUEST TO TABLE

or

REQUEST FOR HEARING

and

REQUEST FOR PRODUCTION OF DOCUMENTS UNDER FREEDOM OF INFORMATION ACT

Respondent, Glenn A. Baxter, P.E., K1MAN, hereby comes through this pleading and makes this sworn affidavit of his own personal knowledge.

INTRODUCTION

Complainant, Brian L. Crow, has filed a written "Complaint" with the Maine Board of Licensure for Professional Engineers against the Respondent, and following board procedures, its Complaince Officer will present the findings of his "investigation," if any, to the Board at its regular public meeting on January 19, 2006 at 9 A.M. Mr. Crow represented to Respondent that he (Crow) has also filed an identical "Complaint" with the Illinois Division of Professional Regulation.

Mr. Crow has also petitioned all State of Maine Representatives and Senators to withdraw their official recognition of Respondent dated 13 March 1991 as well as petitioning Vermont Academy to withdraw Respondent being honored as a Distinguished Alumnus of the Academy on 1 October 1993. Further, Mr. Crow published an "editorial" in a local Maine Newspaper calling for withdrawing the Maine Legislature's recognition of the Respondent and falsely representing that he (Crow) was writing as a resident of Manchester, Maine. "Manchester Newsletter" is the name of an anonymous and scurrilous newsletter about the Respondent and is referred to below with regard to retired CBS newsman, Walter Cronkite, KB2GSB.

The Maine Legislature voted as follows on 13 March 1991:

"Be it known to all that We, the Members of the Senate and House of Representatives join in recognizing Glenn Baxter, of Belgrade Lakes who, as a coordinator and ham radio operator for the International Amateur Radio Network and International Amateur Radio Network Peace Corps, has served humankind through his noble efforts to facilitate international communication for the disaster stricken areas of the world;

And be it ordered that this official expression of sentiment be sent forthwith on behalf of the Legislature and the people of the State of Maine."

Mr. Crow has also filed "Complaints" with the Maine Attorney General, the SEC, the FBI, the Federal Trade Commission, the FCC, etc., etc., ad infinitum.

FACTS

Complainant seeks to revoke the Professional Engineering licenses of Respondent which could naturally lead to either non renewal or revocation of Respondent's commercial and amateur radio FCC licenses where rather vague issues of "character" might play a deciding role in any such FCC action. Complainant offers to the Maine Board of Licensure for Professional Engineers evidence of an "FCC Notice of Apparent Liability" against Complainant, a Petition to Deny Renewal of Respondent's FCC amateur radio license (by Keith Lamonica, an attorney admitted to practice before the FCC), and a letter urging the FCC to not renew Respondent's FCC license by former CBS anchorman Walter Cronkite (a backer of ARRL, the American Radio Relay League), whose amateur radio call sign is KB2GSD.

Respondent is Executive Director of AARA, the American Amateur Radio Association, which directly competes with Complainant, Cronkite, and Lamonica backed ARRL, the American Radio Relay League, which is also an amateur radio "trade association." ARRL has a short wave "broadcast(1)" station with call sign W1AW which attempts to compete with Respondent's "broadcast(1)" station with call sign K1MAN. There is considerable professional jealousy between W1AW and K1MAN. Both

"broadcast(1)" stations are barred from commercial interests such as direct on air advertising, transmitting music, etc.

Respondent is also Manager of IARN, the International Amateur Radio Network, which directly competes with ARRL's amateur radio emergency communications organization known as ARES, the Amateur Radio Emergency Service.

Both AARA and IARN are divisions or the IARN Amateur Radio Peace Corps Foundation, Inc., a 501(c)(3) tax exempt Maine corporation.

The Complainant(s), de facto, being Crow, Cronkite, the FCC, and Lamonica would seem to prefer that AARA and K1MAN be eliminated from competing with ARRL and W1AW.

MOTIVATION OF COMPLAINANTS

Brian L. Crow

Mr. Crow represented to Respondent that he is a former NSA operative and has grants from the U.S. Department of Justice as well as the state of Pennsylvania, presumably to look into possible terrorist connections between Respondent and other factions world wide. IARN does, indeed, have operations world wide under the name and style of the Maine foundation and corporation IARN Amateur Radio Peace Corps Foundation, Inc. Respondent denies all of Mr. Crows allegations with regard to anything improper by Respondent or Respondent's many national and international operations, all humanitarian in nature. I am sure thet the NSA is capable of keeping "tabs" on IARN, AARA, K1MAN, and your Respondent.

Mr. Crow has essentially been "stalking" Respondent since 1992, presumably driven by his own jealousy and amusement and also to defraud the Justice Department and the state of Pennsylvania out of grant money coming from public taxes in the wake and huge frenzy following 911. Mr. Crow can be heard daily on amateur radio acting in a juvinile fashion (not illegal) but with no constructive sense of purpose (also not illegal). Mr. Crow sends harassing E-Mail to Respondent daily and appears to create anonymous anti Respondent web sites on a regular and continuing basis. All of Crow's allegations are false and/or greatly misleading, and Respondent intends to subpoena him before this Board.

Walter Cronkite, KB2GSB

Mr. Cronkite did a K1MAN station ID for Respondent years ago when his autobiography was about to come out, not then known to Respondent. Mr. Cronkite's ulterior motive was to promote his book by getting free publicity over K1MAN's international short wave programs. The backers of ARRL and W1AW were not too happy about Mr. Cronkite's thus implied support of IARN and amateur "broadcast"(1) station K1MAN. One anonymous radio amateur and ARRL supporter (presumably) even began publishing an anti Respondent newsletter (Manchester Newsletter) with

the main and untrue theme being that Respondent was a convicted child molester and/or an "alleged child molester." Respondent met with the FBI regarding this vicious newsletter, published for many years and now defunct after Respondent brought suit against three suspected perpetrators, one being Chuck O'Neil, K1KW, who is part of the Lamonica petition. This newsletter (group) contacted Mr. Cronkite at CBS and threatened to also implicate him (Cronkite) in child molesting allegations. Cronkite then asked Respondent to cease using the ID, and Respondent agreed only if Mr. Cronkite would appear on Respondent's world wide short wave radio program and explain why he made this request. Cronkite declined and threatened to "go public" against Respondent which he subsequently did, his letter supplied to Crow, published all over the internet, and, in turn, supplied to the Maine Board of Licensure for Professional Engineers.

Respondent, not wanting to "cave in" to this criminal blackmail, tantamount to terrorism, continues to use the Cronkite ID, since pulling the ID would appear to be a (false) admission of guilt on several fronts. All of Cronkite's allegations are false, and Respondent intends to subpoena Mr. Cronkite before this Board.

Keith Lamonica, Esq., W7DXX

Mr. Lamonica is presumably being paid well by ARRL, Mr. Crow, or Mr. Cronkite, or all three. Perhaps Lamonica is just jealous and is working against Respondent "for free." All of Lamonica's allegations are false and/or misleading, and Respondent intends to subpoena him before this Board.

Mr. Lamonica has distorted facts and provided wholly false testimony in his petition, part of the instant "Complaint."

Regarding Rockwell Collins, Respondent legally acquired and used the Collins trade for many years after it was legally abandoned by Rockwell International after they bought out the Collins Radio Company and dropped using the Collins trade mark for the statutory two year abandonment period. Lamonica's version of this issue is false and misleading. The entire Lamonica petition is false and misleading. Respondent intends to subpoena Lamonica to appear before this Board.

FUNDAMENTAL ISSUES REGARDING THE FCC AND RESPONDENT

Respondent began transmitting world wide short wave programs in 1987. An FCC letter ruling in 1989 equated K1MAN programs with W1AW programs, both perfectly legal, of course..

In 1991 the International Amateur Radio Network was sending donated humanitarian supplies from Germany to Iran (in response to a major earthquake killing over 100,000 people and making over 100,000 people homeless) with the stipulation that IARN volunteers (from the Soviet Union and England) would supervise the distribution. The U.S. State Department objected to IARN's stipulations since they prefer to just

send the relief supplies, no strings attached. IARN would never again get donated supplies from its valuable private sources if the supplies ever fell into non humanitarian hands (such as the military). The State Department has unlimited sources for their politically motivated relief.

Shortly thereafter, K1MAN received three Notices of Apparent Liability (totaling $3,600) from the FCC for doing exactly what was sanctioned by the FCC the previous year and is done daily by ARRL and W1AW. Respondent tried to take these conflicting FCC actions to court for resolution many times, without success, including a lawsuit in Federal District Court. See the attached Federal District Court ORDER.

Now the FCC has issued another "Notice of Apparent Liability," (the operative word here being "apparent!") this time for $21,000, as well as putting Respondent's amateur radio renewal application in "pending" status. Law permits K1MAN to continue operations until final disposition and all court appeals of the renewal application, of course.

The main issue is that scheduled W1AW and K1MAN short wave programs might cause incidental (not criminal) interference to ongoing communications either on the published frequency intentionally (to cause a conflict - a criminal act on the part of ARRL supporters) or unintentionally. The FCC has ruled that such K1MAN and W1AW programs are not less important than such existing communications. Conflicts must be resovled between the parties on a common sense basis per FCC rules. K1MAN has ALWAYS attempted to resolve any conflicts in good faith, and the other parties (Bermuda Net, Georgia SSB Net, ND8V and company, Polish Net, Salvation Army, Boy Scouts, etc.) basically say "Heck no; we will get the FCC to revoke your license instead."

The Commission (Riley Hollingsworth, K4ZDH) has actually encouraged radio amateurs to cause intrerference with K1MAN programs, such encouragement being a felony under Sections 333 and 501 of the 1934 Communications Act:

Section 333: "No person shall willfully or maliciously interfere with or cause interference to any radio communications or any station licensed or authorized by or under this Act operated by the United States Government."

Section 501: "Any person who willfully and knowingly does or causes or suffers to be done any act, matter or thing, in this Act prohibited or declared to be unlawful, or WHO WILLINGLY OR KNOWINGLY OMITS OR FAILS TO DO ANY ACT MATTER OR THING IN THIS ACT REQUIRED TO BE DONE, OR WILLINGLY OR KNOWINGLY CAUSES OR SUFFERS SUCH OMISSION OR FAILURE, shall, upon conviction thereof, be punished for such offense, for which no penalty (other than a forfeiture) is provided by this Act, by a fine of not more than $10,000 or by imprisonment for a term not exceeding two years, or both."

In fact, Respondent first learned of this law in ARRL's 1989 FCC Rule Book. K1MAN began to publicize this criminal statute over the short wave programs, and ARRL then deleted the law from its 1990 and all subsequent FCC Rule Books, this act itself being a felony by ARRL.

FCC and Justice Department officials who have discouraged Respondent from reporting intentional criminal interference to K1MAN transmissions to the Judtice Department are also, themselves, in criminal violation from this federal statute.

Thus, the FCC Notice of Apparent Liability against Respondent is alleging a felony, which carries a two year jail sentence and/or $10,000 fine per occurrence. Similar actions against ARRL would be substantial, since W1AW has been doing the same thing as K1MAN for almost 100 years.

THE FCC

The FCC is probably "in bed" with ARRL (welcome to America!), which they can control, where they cannot "control" respondent since Respondent has no paid advertising or "controllable" commercial interests. The allegations in their recent $21,000 Notice of Apparent Liability are all false and/or misleading, with the same bogus allegations also being made in 1990 and never allowed by the FCC to go to court for resolution.

Respondent's attempts to bring the FCC false allegations before a court have not succeeded. Respondent even brought suit against the FCC in Federal District Court which was dismissed on sovereign immunity grounds. See attached ORDER.

All of the FCC's allegations are false or misleading, and Respondent intends to subpoena various officials of the Commission before this Board.

Respondent's amateur radio license renewal is currently "pending" in "legal limbo" while Respondent continues to legally operate station K1MAN until court action is taken but not expected by Respondent. The FCC is apparently watching this Board's actions with regard to the instant Crow complaint.

JURISDICTION

This Board is essentially being asked to litigate an FCC matter and it has no jurisdiction to do so. If the Board revoked Respondent's Professional Engineering License, the FCC could, in turn, revoke Respondent's amateur radio license, (on character qualification grounds) and vice versa, presumably. This whole charade is just a cute ARRL and FCC trick; again, welcome to America! Fortunately, we lave laws and administrative procedures here, unlike so many other less fortunate countries.

Wherefore,

Respondent moves this Board to Dismiss the Complaint.

or

In the alternative, Respondent moves the Board to table the Complaint until final disposition of Respondent's matters before the FCC.

or

In the alternative, Respondent requests a full hearing before this Board.

and

Respondent requests production of all documents and evidence in this matter that this Board may now have that has not already been supplied to the Respondent.

and

Respondent requests to inspect all documents, notes, minutes, etc. under the Freedom of Information Act regarding all previous matters, complaints, etc. made by Respondent to this Board in the past and specifically regarding fire hazzards and code violations at Ray Bouchard's two radio stations where Respondent was once employed. This employer is mentioned in the Lamonica petition to deny Respondent's FCC amateur radio license, said petition being a part of Mr. Crow's "Complaint."

Respectfully submitted,

(signed)
Glenn A. Baxter, P.E.
Registered Professional Engineer
Amateur Call Sign K1MAN

cc: Brian L. Crow, K3VR

Keith Lamonica, W7DXX
Federal Communications Commission
Dave Sumner, K1ZZ, CEO, ARRL
Leo Meyerson, W0GFQ
James Mooney, Headmaster, Vermont Academy
Ray Bouchard
World wide distribution

(1) Broadcast is used in the generic sense here. Strict FCC legal definition of "broadcast" is "radio transmissions intended for reception by the general public," which is illegal under FCC rules and functionally impossible over amateur short wave radio since the public doesn't listen to amateur short wave radio because the subject matter of such transmissions must also be "Of direct interest to radio amateurs" under FCC rules.

Sworn before me,

When I was talking to The RADIO SHACK Tech About the pro 2096 Not
working correctly .(last Friday) I mentioned that the pro 2096 was off
the WEBSITE and SHe said all her records State it is AN ACTIVE product.

I will be taking my pro 2096 Back tomorrow Morning 01/12/06 since I
cannot Get it to Recieve a Signal That ISNOT all Broken up ..
More in likely one of the REASONS RADIO shack has them Back in Stock again.

I talked to a local Policeman today and I listen to his Radio and There
WAS NO CHOPPIENESS .. Signal was Clear No Breaking up!!
So it Has to be a DEFECT in the FIRMWARE that Radio Shack HAS NOT
updated for The DETROIT/Genesee County , Mi AREA

$499.00 is Too much money to Sit and Wait For Radio Shack to offer an
updated Firmware At Radio Shacks Convience.

He has recieved lots of awards including one from the state of Main
itself. Walter Cronkite promoted K1MAN to before the bad pple got to
him. It is a good thing the FCC cant put him off the air until they
go to court which they are scared to do. And there are pple who are
going to sindicate K1MAN's 20 meter show. N9OGL and Sirius radio are
both going to put it on the air.

K1MAN is a great man. Are you on Sirius radio? Has your state
priased you in a legistlature resolution? Has Walter Cronkite ever
announced on your station? I bet not because you are just average.

K1MAN is a great man and I back him all the way.

Multiple site Motorola systems don't transmit on the same frequency
from different sites. In theory what you say is true (although it's
not "multipath", it's plain old simple interference - multipath refers
to a signal from a single transmitter arriving over multiple paths,
and nothing else), but if you look at the actual in-the-field sites,
you'll see that your theory isn't put into practice.

>One might guess that if one is close to one of the transmitters (of a
>multiple transmitter system) then one would not have a problems because the
>near transmitter's emissions would dominate. I have not tested this
>hypothesis.

It's not an hypothesis, it's called "capture effect", and it's a
property of FM receivers.

>When listening to a one transmitter site (Owosso), my BCD396T receives
>almost all voice signals well most of the time. When listening to a system
>(APCO25) that uses multiple transmitting sites (Genesee), my BCD396T
>produces distorted audio much of the time.

Genesee is *a* site - in a larger system that encompasses many sites..
The fact that it lists more than 1 control frequency doesn't mean that
it has multiple control channel transmitters on the air at the same
time.

>At my location, the signal from
>the control channel of the multiple transmitter system is somewhat stronger
>than the signal from the one transmitter system.

Since there's only 1 control transmitter on any one frequency at any
one time for any one site, you're analyzing the situation incorrectly.
You may be getting interference of some sort, but it's not due to
multiple control channel transmitters from the same system at the same
location.

>In short: multipath can be caused by means other than signal
>reflections

Except that what you're describing isn't called multipath. Multipath
is the term used to refer to signals from a single transmitter
arriving over multiple paths - hence "multi-path".

Id' say, judging by that field notice that Mr. Baxter was definitely in the wrong (especially where the 75 minute infomercial about 'baxter and associates' was concerned).

I really hate to say this, but K1MAN appears (on the face of the facts) to have violated a number of the rules and is now subject to those rules.

let see how this plays out, shall we?

In a simplistic way, Intermod (intermodulation distortion) is the result of two or more separate signals being combined. The intermixing of these signals creates distortion of the signal you are receiving.
In a round about way, multi-path is similar because the combined multiple images are out of phase and they will mix in the same way as do two unrelated signals, and create distortion.

Honest John wrote regarding multipath:
> Is that the same thing as what ham radio operators of 2 meter repeaters call
> "intermod" ?

No. Multipath is from the same signal arriving via two different paths
(typically resulting from a reflection), one of which is delayed enough
to cause phase cancellation.

Intermod is from separete signals of different frequencies mixing in
some nonlinear componenent either in or near the receiving apparatus,
producing signals that are the sum and difference of the two frequencies.

I top post because modern readers allow top post. Your 'net ettiquette'
is/was totally arbitrary to begin with. Top posting allows the reader to
get to the issue without having to scroll through 100+ lines of text
that has already been beaten to death.

And finally, if you are responding to top posting you have already
violated your own precept by your response.

Now, there is a large consensus that a certain individual in the State
of Maine is in difficulty with the FCC.

Is "the state of Main" a new state? Where is it?

What is a "pple?"

Can you spell "can't?"

What is "sindicate?" Is that an act against God as in sinning?

My state has never priased me for anything. However, it would help to
know what "priased" means.

Our state does not have a "legistlature" so maybe that is why I have
never been "priased."

So if this is the quality of individual that thinks a nut-job like K1MAN
is a great man, then I know I am on the right side.

This is a perfect example of why we need to do away with the public
school system of "education."

I think I did say "in a simplistic way". Yes I do understand what intermod is, however, I thought a discussion of 3rd order intercept series was not in order to answer his question. I was using the KISS approach.

Your "logic" is utter backpedaling b.s. - long ago refuted by serious
Usenet readers. If a third and fourth party decides to add to a top
posted thread, it rapidly deterioriates into an unfollowable mess.
This is especially true when you top post to an already bottom posted
thread as you just did. You clearly are a rank newbie who needs
instruction.

Don't even presume to lecture someone else, oh Clueless One.

> And finally, if you are responding to top posting you have already
> violated your own precept by your response.

Oh, wow! What logic skillz you possess, Batman. I'll bet you impress
the hell out of the half-drunk rednecks at your local tavern. Better
run right over there instead of hanging out here where you are SO not
with it.

Check your threading, Doc, and you'll see that it was not your post I
was responding to -- in fact I don't think it had even hit my server
yet. So you weren't being contradicted.

I received a Pro 96 from Santa this year.It replaced my Pro 39. I would like to listen to the Detroit city police dept.but I was told that the scanner can't decode the signals. Has anyone figured out how to program the scanner to do this? I have the win96 program and it is excellent.Any help will be greatly appreciated. Detroit is where the real stuff happens and the local police are getting boring.
Thanks

This statemment is comical. Howard Stern, who if filthy rich, and his radio network, which was obscenely huge, could not win against the FCC.

K1MAN is a peon, compared to Stern. You are stupid, delusional, or both.

Or the transmitter apparatus. (We have a great one here, resulting from a hospital paging transmitter intermodding with just about everything on a hill that has enough RF floating around to run a few homes. The paging transmitter - that's supposed to cover only the interior of the building - is dirty enough and strong enough to cause intermod in tower joints, fences, who knows what, 5 miles away.)

There are some issues with reception of the new MPSCS (Michigan Public Safety Communication System), of which the city of Detroit is now a part of. While it is a Motorola APCO-25 digital system, Detroit, and Genesee County are on what is called a simulcast system, which has been a little more difficult to decode. It doesn't matter which digital scanner you have, they're all having problems with Detroit.

Detroit is using 868.7250 as it's primary control channel. The secondary control channels are 868.5375, and 868.9375. Plug them in your scanner, and scan in open mode, see what you get. Depending on where you live, and what you're using for an antenna, you might be successful! Let us know.

You can find more info here, http://www.radioreference.com/modules.php?name=TRSDB&sid=100 including all the other cities, and counties on MPSCS, as well as the Talk Groups!

There is also a forum for Michigan here, http://www.radioreference.com/forums/showthread.php?t=25992

This - <http://www.radioreference.com/modules.php?name=TRSDB&sid=100>
- is the system. The talkgroups you want are down in the Wayne County
area under "Wayne County (82) - Detroit City Police Talkgroups". You
probably want to program the 701 tower - the control frequencies are
867.075, 868.5375, 868.725 and 868.9375. It's a plain old APCO25
system so you should have no problem.

Al, are you, or anyone you know, able to receive Detroit's talk groups on MPSCS? Or are you assuming it should be no problem? If so, I'd be interested in hearing some details of your setup. While I agree with you that MPSCS is a standard APCO-25 system, Detroit is not, it is a simulcast sub system joined to MPSCS. Also, #701 is not "a tower", it is a cluster of ten towers within this sub system, referred to as #701. Most everyone I know using either Radio Shack (GRE Mfg), or Uniden digital scanners, is having great difficulty receiving Detroit since they joined MPSCS.

Please advise!

Thanks,
Bill Crocker

p.s. 867.0750...I missed that one in my original post, but it doesn't really matter, as it is a secondary control channel.

I LOVE the 97. but if you're sticking with milair, and not constantly
adding new frequencies, stay with the 43. the 97 is designed for those
who are always adding, changing and searching for new frequencies.

Hitler was a great man too. Germany was starving after ww1 and he made it
prosper. Of course at the hands of millions of people.
JFK was a great man. Of course he almost started ww3 and was hooked on meth.

I just put in the frequencies and i did hear a transmission from what sounded like a fire dept. I have an old Radio shack ground plane with a 16 foot radius and three vertical elements.I can hear Police depts. aprox.20 miles away. I'll just keep plugging away and hope for the best. Thank you guys for the info. You were a big help.
Thanks again!

230. Cable for Pro 95 drivers needed?

Newsgroup: rec.radio.scanner
Date: 2006-01-14 15:16:43 UTC
From: Larry Copenhaver <lcopenha@naxs.com>
Message-ID: <d31f7$43c91613$d81841eb$18060@NAXS.COM>
Source record: 10410

I am going to buy the Radio Shack cable #20-289 for the Pro 95 Scanner today. Can anyone tell me if I will need drivers for Windows 98se for the cable or will the computer simply recognize it? If I need the drivers, can anyone tell me if Radio Shack has the software or where I might be able to download it? My local Radio Shack is privately owned and does not stock the cable so I am traveling about 50 miles to get it. The sales people at that RS are not really computer literate so I do not know if they will know the answer to this question. Thanks for any help in advance.

231. Re: Cable for Pro 95 drivers needed?

Newsgroup: rec.radio.scanner

Message-ID: <e9OdnRhheIDVh1TeRVn-oQ@comcast.com>
Source record: 10411

Radio Shack's Cat #20-289 cable does not require any drivers. It is a serial cable, and requires that your computer have a DB9 Male RS232 serial port. If your computer is older, most likely you will have at least one, of not two of these ports. However, if you have a newer computer it may not have any. Newer computers dropped legacy serial ports in favor of USB ports. If all you have is USB ports, then you will also need a USB-to-Serial adapter. Those adapters usually come with their own drivers.

Considering your computer is running Win98SE, it's very likely that it's old enough to have at least one RS232 DB9 serial port.

To see what a DB9 male RS232 serial port looks like, click here:

http://www.safenet.com/images/273001.JPG

It will have 9 pins.

You'll also want to download Don Starr's Win95 software for your scanner:

http://www.starrsoft.com/freeware/Win95/default.asp

Dox found, photographed (no scanner) and emailed to James, Al and Gary.

If anyone else would like it, email me with a VALID email address and
I'll send. (that's pointed at you, al! :-))
It's about 2.5MB zipped. Anyone got some space to host it?

I'll scan it properly when I find someone locally with a flatbed
scanner.

My email address is my callsign at orcon dot net dot enn zed

The limit key is used to program a search (search between 2
frequencies, lower limit and upper limit), not for scanning.

You could always cut the un-necessary info and bottom post. Only leave the relevant info to be answered intact. Why more people don't do this I have no idea.

An updated version of ID Tracker has been released.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

- Added support for multiple sound cards.
- Added command line option to set the settings (INI) file.
- Added additional debug features.
- Resolved issues with tracking EDACS systems with BC245 and PRO-2052 scanners.

There's at least $40k invested in it. A used R3 scanner sells for around $300. Trailer is easily worth $10,000. Very easy to understand why this business venture failed. Most folks wouldn't understand how to use the scanners and I'm sure there isn't time to explain all the details to every rental customer.

Plus getting a concession to set up at some race tracks could be a
problem unless you know the right people. I am surprised the seller is
not offerring it as a going concern if it were profitable.

ARRL PRESIDENT QUITS - "IF YOU CAN'T TAKE THE HEAT, GET OUT
OF THE KITCHEN" SAYS K1MAN

Quoting President Harry Truman, Glenn Baxter, Executive Director of
AARA,
the American Amateur Radio Associaation, bids Jim Haynie "Good Luck in
The Contest." According to this week's ARRL Letter:

"The election of a new ARRL president will highlight the annual meeting
of
the ARRL Board of Directors. When the Board convenes Friday and
Saturday,
January 20 and 21, in Windsor, Connecticut, Jim Haynie, W5JBP, will
wield
the gavel for the last time as the League's president. Haynie, who
lives in
Dallas, Texas, has made it known over the past few months that he will
not
be a candidate for a fourth two-year term. He says that while it's been
a
great honor to serve as the ARRL's president for the past six years, he
feels it's time for him to step aside.

"It's a time-consuming job. It tends to wear on you after a while,"
Haynie
conceded this week. "I've racked up hundreds of thousands of miles
traveling--not only here in the United States but all over the world
representing the ARRL and Amateur Radio."

Haynie says he's thoroughly enjoyed his tenure in the League's top
office--a
strictly volunteer position--but he believes someone with fresh ideas
and a
different vision from his now should take over the reins. The ARRL
Board
customarily elects a president from among its own ranks or elevates one
of
the League's vice presidents, although it's not required to. When he
was
elected, Haynie was the ARRL West Gulf Division Director.

Among the successes of his six years as ARRL president, Haynie cites
the

ARRL Education and Technology Program--often better known as "The Big Project." Haynie kicked off the initiative to put Amateur Radio stations and a curriculum into schools across the US shortly after he took office in 2000. The program now boasts upward of 180 participating schools.

He says he's also proud that he's been able to contribute to enhancing the visibility of Amateur Radio at the FCC, in "official Washington" and on Capitol Hill. "I enjoyed that work," said Haynie, who testified before the House Subcommittee on Telecommunications and the Internet on behalf of the Spectrum Protection Act in 2003. Last year, he submitted written testimony to the House Government Reform Committee on the successful efforts of Amateur Radio operators who provided communications during the Hurricane Katrina response.

"It's paid off in the long run," Haynie said of his regular visits to Washington to advance Amateur Radio's agenda. "Amateur Radio needs to learn how to sell itself, not just from the League's standpoint," he said. "The president can only do so much." He encouraged all radio amateurs, whether or not they're ARRL members, to promote Amateur Radio and its value to the community.

Once he steps down, Haynie says he's looking forward to "maybe chasing some DX or maybe running a few contests." But he says he'll also make himself available to the Board to handle any necessary duty.

Among other items on its agenda, the ARRL Board is expected to discuss the process of developing effective band plans to support rule changes the League recently requested in a Petition for Rule Making RM-11306. The petition asks the FCC to regulate the amateur bands by necessary bandwidth rather than by mode. The Commission will accept public comments on the petition until February 6.

The Board also plans to review and discuss Article 11 of its Articles of Association, which defines eligibility to hold League office. It also will hear reports from officers and consider recommendations from various committees."

256. K1MAN/IARN/AARA SAYS FCC TO OFFER K1MAN CALL FOR SALE AT STARTING BIDS 0F $1,000,000

FCC TO OFFER K1MAN CALL FOR SALE AT STARTING BIDS 0F $1,000,000? JAIL TIME FOR FCC "SPECIAL COUNSEL" RILEY HOLLINGSWORTH?

See AARA NEWS

>From ARRL web site:

FCC zips through vanity application backlog (Jan 12, 2006) -- Once the FCC resumed processing Amateur Radio vanity call sign applications earlier this month, its Wireless Telecommunications Bureau (WTB) blazed through the backlog. A total of 990 vanity applications piled up in the queue after the FCC suspended vanity processing September 23. An initial batch of 121 grants Friday, January 6, was followed by 195 more the next day. Apparently confident by then that the system was working okay, the FCC let loose the remaining 674 vanity grants Tuesday, January 10. During the vanity hiatus, applications appeared with a "Y--application has problems" flag in the Universal Licensing System (ULS), prompting some concern on the part of those who checked their applications' status. The WTB reportedly applied the "Y" status to prevent the system from running the entire backlog at once. The WTB halted vanity processing last fall after realizing that filing deadline extensions for licensees in certain states affected by hurricanes Katrina and Rita applied to Amateur Radio's two-year "grace period" and could impact the vanity system. FCC spokesman Tracy Simmons told ARRL today that the WTB now is processing current vanity call sign receipts. It typically takes approximately three weeks from the time a vanity application is submitted until a call sign is issued.--some information from Fred Maia, W5YI

==========
NOTICE TO BULK/COMMERICAL E-MAILERS:
==========

Pursuant to US Code, Title 47, Chapter 5, Subchapter II, p.227, any and
all unsolicited commercial E-mail sent to this address is subject to a
download and archival fee in the amount of $500 US.

Anyone who sends unsolicited commercial e-mail to this account will be
charged a $500 processing fee. Viewing this mail will be considered
official notification and acceptance of these conditions.

Failure to abide by this will result in legal action.

RCW 19.190.020
Unpermitted or misleading electronic mail -- Prohibition.
(1) No person may initiate the transmission, conspire with another to
initiate the transmission, or assist the transmission, of a commercial
electronic mail message from a computer located in Washington or to an
electronic mail address that the sender knows, or has reason to know, is

held by a Washington resident that:
(a) Uses a third party's internet domain name without permission of the third party, or otherwise misrepresents or obscures any information in identifying the point of origin or the transmission path of a commercial electronic mail message; or
(b) Contains false or misleading information in the subject line.

RCW 19.190.040
Violations -- Damages.
(1) Damages to the recipient of a commercial electronic mail message sent in violation of this chapter are five hundred dollars, or actual damages, whichever is greater.

First off, I want to state that monitoring phone (cordless/cell) bands/frequencies in Canada is legal. That being stated, is there a scanner, preferably handheld, that is capable of monitoring 2.4 GHz bands/frequencies? If so, can I get a recommendation on a specific make and model?

Thanks

never heard of a scaanner that does that freq range I guess I could
put a scanner and transverter that would cover that rnge esp ass a
scanner aat hf can scaner more thanmost of say my 2m radios

279. Streaming internet Scanner Audio - How?

Newsgroup: rec.radio.scanner

I would like to set up at my house a scanner receiver so that my
elderly dad can listen via internet (just like all the other streaming
scanner audio sites) to the broadcasts.

Could someone please advise what equipment I need to do this and how?
I have the scanner receiver, the Windows XP home computer, and
broadband connection.

Thanks alot!

even if you find a scanner to listen to 2.4 gigs , pretty much all the
cordless phones are digital , up there. the apco25 digital scanners
can't decode the digital cordless phones. nearly all of the
potential 2.4 gig activity your scanner could find would be digital
and / or wideband (wifi !) and either not decodeable or hearable
/ decodable in the case of wifi , for example. you might find
an occasional nanny cam if you have " video " abilities in the scanner
(also a wide bandwidth signal)
but they are rare to run across as they run pretty low power and have
limited range.

you could save yourself money and get something more suitable for 2.4
gig work by making your laptop into a spectrum analyzer type
of scanner and using the " card "
http://cgi.ebay.com/2-4-Ghz-Spectrum-Analyzer-WIFI-Wireless-WISP-Kit_W0QQitemZ5855613496QQ
categoryZ44996QQssPageNameZWDVWQQrdZ1QQcmdZViewItem

and doing the 2.4 gig type of things like wardriving and mapping
/ popping local bubbles !

http://www.bitshift.org/wardriving.shtml

there is some ham activity , up there , that is narrowband ..... not
much else ! (for the consumer with a nb scanner)

the modern technology that has moved into the 2.4 (and now 5 gigs)
range has kinda left scanners behind. for communications that takes
place up in the 2.4 gig range and above (with 5 gigs becoming all the
rage nowadays) , a scanner isn't really the proper instrument
anymore, as the times and technology have changed. scanners have
their place as narrowband instruments but not much narrowband stuff
happening for the scanner hobbyist in the 2 gigs and up range !

Fairly simple - in addition to your computer and scanner, an audio
connecting lead from scanner to audio (line) input on your computer.

A program to do the streaming can be found at :-

http://www.microsoft.com/windows/windowsmedia/9series/encoder/default.aspx

A little bit of head scratching to get it set up, may help to read
instructions here.

If you use a router to connect to the interweb, you may have to open a
port to allow the streaming audio, IP stream through. You get to set
which port to use in the encoder. You may also have to let your firewall
know what's going on here too.

Once set up, the audio stream can be listened to with Windows Media
Player. Go to -> Sync > File > Open URL. The URL will be :-

http://your_IP_address:Your_port_number.

note, there is a full colon - : - between your IP address, and the port
you are using for streaming.

If you have more than one computer set up as a local LAN, you can check
that it is working locally before committing to the net. If you do this,
you will no doubt notice maybe a one or so second delay in the audio
coming out of the 'decoding' computer.

have fun.

Hi, I'm trying to get to grips with the AR8200 MkII I bought....
what do the following terms mean?
WFM, NFM, SFM, WAM, AM, NAM, USB, LSB, CW
I tried googling but couldn't find any simple definitions.

W means wide band, like WFM=wide band FM. WAM=wide band AM

N means narrow band, like NFM= narrow band FM, and NAM= narrow band AM

USB= Upper side band, and LSB= Lower side band, and CW= Continuous Wave used
in moris code (like Hams do)

assuming you already know the difference in Am (amplitude modulation) and FM
(frequency modulation)

good luck with streaming but if it turns out to be too difficult another option might be to record the scanning you do with
scanrec:
http://www.davee.com/scanrec/
and then convert your recordings to mp3 and upload them to a site where your Dad can download them and play them at his liesure.
One of the good things about scanrec is it can cut out all the silence/low noise and only record proper signals, thus your Dad
wouldn't have to listen to any long periods of silence.

Source record: 10375

Its so easy to use you really don't need a manual for the Uniden BC 142XL scanner.

Turn it on. Push the "MANUAL" button to stop it from scanning.

Push number 1, then push "MANUAL" again. This should leave you on channel one.

Using the keypad enter the frequency you want to monitor, then push "E." Press "REVIEW" at anytime to see what frequency is programmed there. If the review button flashes 000.0000 on the LED readout display, you might be entering an invalid frequency. Refer to the list of acceptable frequencies in the Frequency Range Bands below.

Push "MANUAL" to step to channel number two. Enter the frequency. Push "E." Push "MANUAL" to step to channel three. Repeat this process until all the (10) channels are full, or you've run out of frequencies to enter.

Push "SCAN" to start automatically scanning the frequencies. The radio will stop when it hears someone talking, and resume scanning two seconds after the conversation has stopped.

Frequency Range Bands:

20 to 29.7 MHz (10 Meter "Ham" Band)
29.7 to 50 MHz (VHF Low Band)
50 to 54 MHz (6 Meter Amateur Band)
136 to 144 MHz (Military Land Mobile)
144 to 148 MHz (2 Meter "Ham" Band)
406 to 420 MHz (Federal Government Land Mobile)
420 to 450 MHz (70cm "Ham" Band)
450 to 470 MHz (UHF Standard Band)
470 to 512 MHz (UHF "T" Band)

The PRO-2005 is an excellent scanner, although it's not a Trunk-Tracker, and it can't decode digital. There is still considerable information available on-line from Radio Shack.

Click here:
http://support.radioshack.com/support_electronics/28538.htm

Some additional info, plus modifications can be found here:

this is really good info (thanks), but I've run into a problem and you may know the answer. I've got several computers here at home on a network and I've managed to get a stream going from one computer (using WME9) and I'm
picking it up in WMP9 on another, problem is for a computer outside my LAN (ie a computer on the other side of my router) the IP
addresses I'm using won't work because I'm behind a router. The IP address on the PC streaming out (eg xx.xx.xx.xx) is behind
another IP address (yy.yy.yy.yy) which is my router on the internet.
How do I configure the address for someone outside to get my stream?

http://portforward.com/english/routers/port_forwarding/routerindex.htm

If you can't figure it out from there, post the question (including
the make and model of router(s) and modem, operating system, version
and service pack if any, and the port number you have to forward) at
http://forum.portforward.com/YaBB.cgi?board=Software

I just acquired a Uniden BC296D scanner from Grove Enterprises. The question ponders me about if the batteries go dead, would it erase all the frequencies programmed into the scanner? Does it have a volatile memory? The instruction manual does not say anything about it. Thanks.

The Uniden BC296D has nonvolatile memory, meaning that your frequencies, talk groups, and other programmed information is stored indefinitely, even if the battery is totally dead, or removed from the scanner.

ok here is the story
lost scanner in Katrina
bought one at salvage store..its good just not what I need

I need a scanner to scan 30 megs and up consistent with legalities (CELL
BLOCK)
I want to scan everything trunks, digital, analog

cost under 600.00

just for record old scanner was a bct780xlt and I was happy with that except
I could not scan digital

recommendations and I will search the recommendations
would like both pro's and con's on recommendations please

The ctcss is a subaudio tone that is transmitted. There are standard tones that range from about 80 to 250 hz. One way they are used is like in the county I live in. There are several fire departments on each side of town. The main dispatcher will just send out the tone to the department they want to go to a fire. The other departments will not hear the call.

DCS works similar. It is a digital code that is sent to turn on a receiver audio to a specific receiver or group of receivers.

You do not need or want to enable this on most scanners. That way you will get all the calls on the frequency.

Read the first 2 entries here to see what they are. Someone who has an 898 (or a manual) will have to confirm my suspiscion that the 898 doesn't do CTCSS or DCS. (As you'll see from reading the Radio Reference wiki, that won't prevent you from hearing anything.)

From the Uniden web site:
http://www.uniden.com/products/productdetail.cfm?product=BC898T

DCS/CTCSS Rapid Decode - Instantly Detects and Displays the Subaudible Tone So You Can Quickly Determine the System Settings.

The way scanner listeners make use of this feature it to narrow down who you want to monitor on a given frequency.

Lets say for example you live in town A, and your fire department uses 151.500MHz, with a CTCSS tone of 123.0, and very close to you in town B, the local tow truck service also used 151.500MHz, with a CTCSS tone of 88.5. If you did not enable the CTCSS feature, you would be hearing communications from both your fire department, and the tow truck service in the neighboring town, and they would often interfere with each other.

Say you only want to listen to your fire department, and ignore the tow truck service in the neighboring town. By enabling a CTCSS tone setting of 123.0, you would lock-out all transmissions from the towing service, and only hear your local fire department.

DCS works in a similar manner, but is a newer digital method.

The bottom line is using CTCSS, or DCS, allows you to hear less, not more, which is sometimes desirable.

You will not be able to hear DSS cordless phones. The whole point of using DSS (digital spread spectrum) is to make it much harder to decode; it is impossible to decode with just an analog scanner. Many standard analog 900 MHz phones are still in use, and you don't need anything special to monitor them. Pretty much any reasonably up-to-date scanner will work for that.

If you are buying a high-end receiver to try to get 2.4 GHz phones, you're wasting your money. On the other hand, once you discover you can't, please post your FS ad here so we can get an almost brand-new receiver for a discount.

For the most part you're right, but there are some analog 2.4GHz
cordless telephones out there at the bottom of the pricing tiers, just
as there were with 900MHz phones.

Before the Board of Licensure for Professional Engineers
State of Maine

In the matter of:

Brian L. Crow, Complainant

vs.

Glenn A. Baxter, P.E., Respondent

Registered Professional Engineer, By Examination, in Illinois

and

Registered Professional Engineer, by Reciprocity, in Maine

and

Amateur Radio Call Sign K1MAN

and

Executive Director of the Fire Hazard Reduction Institute
(Box 440, Belgrade Lakes, Maine 04918 tel. 1-800-262-9543)

and

Certified Fire Safety Advisor

SECOND MOTION TO DISMISS,

or

SECOND REQUEST FOR HEARING

Respondent, Glenn A. Baxter, P.E., hereby comes through this pleading
and makes this sworn affidavit of his own personal knowledge.

INTRODUCTION

The original Brian Crow "Complaint" has essentially been dismissed by
the Board with the focus now being on general discharge issues with a
former employer, Ray Bouchard, and a Complaint made by Respondent to
the Board against the Professional Engineer whose P.E. stamp was on

Bouchard's new building plans which are in clear fire code violation according to a representation made to Respondent by the Augusta Code Enforcement Officer. This latter Complaint was dismissed by the Board on the curious grounds that said engineer "was not involved," an issue now being formally investigated by the Fire Hazard Reduction Institute, Glenn A. Baxter, P.E., Executive Director.

1. Respondent is currently d/b/a as Executive Director of the Fire Hazard Reduction Institute and is a Certified Fire Safety Advisor with hundreds of inspections and fire safety installations already made throughout Maine and the primary source of professional income since FHRI's inception shortly after Respondent was "fired" from Ray Bouchard's Light of Life Ministries and Christian radio stations in Augusta, Maine.

2. Respondent was hired by Mr. Bouchard in 2003 to be his "Chief Engineer" in the radio sense of the term "engineer" on the strength of Respondent's First Class Commercial Radiotelephone(1) and Amateur Extra Class FCC licenses, 16 years of experience in designing and operating a multi transmitter short wave station heard world wide (with an ID announcer being former CBS Newsman Walter Cronkite, who is also a licensed amateur radio operator), many years of professional experience in electronics repair and engineering modifications to Collins high frequency equipment, the design for in house manufacturing of electro-mechanical filters (equivalent to Collins mechanical filters) which were the very "heart" of 750 low frequency receivers custom made for our U.S. submarine fleet, and design and installation of many radio tower and antenna installations.

Respondent has a B.S. Degree in Industrial Engineering (January 1968) from the University of Rhode Island and is a Registered Professional Engineer by examination in that specialty in Illinois, and by reciprocity in Maine.

Respondent has completed significant course work in electrical engineering and has published several articles in the area of physics, chemistry, and the theory of relativity, as well as teaching high school physics, chemistry, and advanced math.

3. Unknown to the Respondent, Mr. Bouchard did not have adequate finances to do most of the projects worked on, and the Station Manager advised Respondent of this fact in detail after the time of hiring. Apparently, Mr. Bouchard really hired Respondent to train a high school junior for six months in electronics and engineering so that this person could assume the job of permanent Chief Engineer at minimum wage or less, since common practice at the station was to work full time and be paid for far less time than actually worked.

For example, Mr. Bouchard constructed the whole station himself, and there were no wiring diagrams or schematics of any of the maze of wire interconnects present in his broadcast station. Respondent strongly recommended making such diagrams and schematics, and Mr.

Bouchard insisted that Respondent do this work on Respondent's "own time," which Respondent declined under these circumstances. Lack of these diagrams and schematics would naturally create a "night mare" for Respondent when there was an equipment failure, as actually happened and has become a subject of the current Complaint against the Respondent.

4. Respondent never received a written job description until a few days before being "fired." The paper signed by Respondent at the time of hiring gives an incorrect impression that there ever was a written job description. The actual job description was verbal and changed on a continuing basis and included:

o Training and supervising the high school junior

o Organizing the relocation of the FM transmitter site

o Design and construction of the new transmitter site

o Starting and running an electronics school

o Negotiating with Salvation Army and private owners regarding proposed translator sites

o Repairs to station equipment

o Negotiation for a cooperative venture in training recent jail released persons.

o Erecting the first translator tower

o Negotiating the price of custom designed antennas

o Negotiating the price for purchase of station equipment

o Salvaging donated towers and equipment.

o Trouble shooting a recently installed repeater

o Selling unwanted equipment on E-Bay

o Consulting with professional consultants

o Making transmitter compliance measurements

When the owner of the FM transmitter location asked "Where is Glenn?", Mr. Bouchard said "He was let go because he wasn't following his job description." Respondent demanded in writing a retraction, and never got one from Mr. Bouchard.

5. Respondent had a computer in his engineering office (found out later to be illegally occupied per the REAL Code Enforcement Officer - Respondent was introduced to a phony "Code Enforcement Officer" minutes before being "fired(2)" -) with all work done for 2003 on a single disk. This disk was loaded into the central office computer as a back up and so some printing could be done on the

central office printer. After being "fired," Mr. Bouchard found this computer file and jumped to the false conclusion that Respondent did non job related work on company time. Respondent never did any such thing, this being a very serious allegation and being a part of the current "Complaint".

6. Respondent wore many hats and relied on different credentials at different times. For example, during the tower erection, Respondent relied on previous tower erection experience with the guy anchoring scheme being standard amateur radio practice and right out of the ARRL antenna handbook(3). The design of the tower system was not a Professional Engineering design, although a progress report was written in a document signed by the Respondent who happens to be a Professional Engineer as opposed to "as a Professional Engineer."

7. Note there is nothing in the above list of job descriptions regarding contact with the FCC or obtaining a required construction permit from the FCC. When Respondent realized that there were serious FCC violations being made by Mr. Bouchard, I brought this to the attention of the station Manager who advised me to protect my personal commercial FCC license which I did by reporting the violations to the FCC immediately, both to mitigate the damages for my employer and to eliminate the danger, as Chief Engineer, and the legal FCC interpretation of this, to my FCC commercial license.

8. At no time did I ever disclose confidential information to anyone in violation of Professional Engineering ethics as apparently alleged by Mr. Bouchard.

9. Although apparently dismissed by the Board, Respondent hereby addresses the "Nazi" comment. Respondent is a world wide short wave celebrity with a daily radio program often containing robust editorials. Respondent often publishes editorials on the internet. One amateur radio data base at www.QRZ.com decided, for "hobby politics," reasons to de-list Respondent's radio call sign K1MAN. About 1000 persons posted comments, many to the effect that Respondent does not deserve to have a listing on www.QRZ.com which uses public FCC data as its basis. Making an editorial point, Respondent compared a list of commenter's call signs with being tantamount to membership in the "American Amateur Nazi Party." There is no such animal, of course. "Nazi" was later changed to "Nerd." One on the list was apparently a P.E. in California, something unknown to the Respondent and not really relevant to this current "Complaint."

8. As a Professional Engineer, I notified the owner and three other Managers of serious fire hazards at the station shortly after the AM transmitter caught fire under the stairs of the only exit to the "fire death trap" old building. That old building, curiously, met the code, but the new building did not meet code according to the REAL Code Enforcement Officer who, somewhat embarrassed, dismissed it as being only 16% or so out of compliance. I notified this Code Officer in writing of my objections, and he "ducked" his mail several

times until I served him with written notice at his home address. This is when I fully realized the common and life threatening "slack" involved in these fire safety matters, an issue at the very heart of professional engineering licensing, namely protection of public safety.

It is my legal position that immediate protection of the lives of the public required addressing these concerns to more than just the owners and Station Manager. The concerns were immediate, time sensitive, and this was no time for "secrets" or confidentiality, in my Professional Engineering opinion. Protection of life was my paramount and immediate concern. I genuinely felt the threat of criminal prosecution for criminal negligence should another fire break out and someone should die in Bouchard's fire traps due to inaction.

I realized that a serious entity needed to be created for public fire safety, and this is when I started the Fire Hazard Reduction Institute with my opening salvo being a formal complaint against the Professional Engineer whose P.E. stamp I saw on the new Bouchard building plans when I first visited the Code Enforcement Officer's office. He, by the way, is also a licensed ham radio operator. His alleged representation to the Complaint Officer of this P.E. Board that he advised me that the new Bouchard building met code is simply not true! He agreed with me that the building was out of code by about 16% but that he had issued a "waiver." This, plus Mr. Bouchard introducing me to a phony Code Officer just before I was "fired" (a crime I reported to the Augusta Police) was the real driving force behind the newly created Fire Hazard Reduction Institute and also started me on a new and exciting professional career as a Certified Fire Safety Advisor.

The Fire Hazard Reduction Institute has uncovered other evidence and testimony about more fire safety code violation issues in Maine in addition to this Board choosing to dismiss out of hand Respondent's formal Complaint. Even new Board member William A. Lotz, P.E. stated during the 19 January 2006 Board meeting that he has personally observed numerous situations that are in FLAGRANT fire code violation here in Maine.

I feel that if I didn't do everything in my power to bring these life threatening violations to light, I would not be living up to my ethical responsibility as a Licensed Professional Engineer, if not also being criminally negligent, should anyone ever be killed in one of Mr. Bouchard's or someone else's fire traps. I don't feel that (or it is not my legal position that) Professional Engineering client confidentiality applies here since I did file a formal Complaint (available to the PUBLIC) with this Board AFTER being "fired" by Mr. Bouchard with my genuine concerns being consistent with being denied my statutory right to cross examine and subpoena witnesses in my "test case" unemployment claim hearing where Mrs. Bouchard even perjured herself; this also being consistent with my Complaint to the

Maine Overseers of the Bar regarding an illegal and totally false ex-parte letter (de facto to the Hearing Officer - a clear violation of Maine bar rules) being filed by Bouchard's attorney, Robert Stolt, also being dismissed out of hand (by the Maine Overseers of the Bar).

To get this (affront to justice) officially in before of the Overseers' supervisory authority, the Maine Supreme Judicial Court, Respondent brought a civil action in Superior Court against Mr. Stolt which was dismissed (surprise, surprise!) and then appealed to the Maine Supreme Judicial Court, also dismissed on the de facto bogus grounds that Mr. Stolt's ex-parte letter was privileged (it was, of course, that wasn't the point; it clearly voilated bar rules, and the Overseers didn't do their job to discipline Maine licensed Attorney Robert Stolt; point made to the honorable Maine Supreme Court justices, QED I think!)

Indeed, since this Board voted in a public meeting attended by the Complainant's apparent representative, Ralph Myra, K1IV, (and thus now probably reported on world wide amateur radio short wave as well as over the world wide internet) to fine me $1,500 (via a Board proposed consent agreement) for making an alleged false formal Complaint about the Maine Professional Engineer who wrongly approved the out of code Bouchard building plans, I am hereby publishing this reply document on the internet as well (to protect my professional reputation) at also world wide www.K1MAN.com. (and also in the public interest of exposing these very dangerous and - life threatening to the public - and commonly found conditions now in Maine - and most other states - and illustrated - for Maine - above).

Wherefore, Respondent respectfully declines to sign the proposed consent agreement and pay the proposed $1,500 fine,

and

Respondent moves the Board to Dismiss this Complaint

or

Respondent requests a full hearing,

and

Respondent requests this Board to reopen the Respondent's Complaint about the Bouchard unsafe and dangerous to the public fire traps (in my Professional Engineering opinion).

Respectfully submitted,

(signed)
Glenn A. Baxter, P.E.
Certified Fire Safety Advisor

(1) Now known as a General Radiotelephone License

(2) Respondent had just written an engineering report outlining very serious fire hazards in both the old and new buildings at the station.

(3) The guy anchoring scheme is known to amateur radio operators as a "dead man." The expanding bolt installation was on the advice of the supplier.

Sworn before me,

(signed)

K1MAN BULLETIN - B060121B -

GLENN A. BAXTER, P.E., K1MAN, BEFORE THE MAINE
BOARD OF LICENSURE FOR PROFESSIONAL ENGINEERS

Dateline, 19 January 2006, Augusta, Maine.

The Maine Board of Licensure for Professional Engineers met today to discuss a "Complaint" against Glenn A. Baxter, P.E., K1MAN, brought by Brian Crow, K3VR. Crow's apparent "representative," Ralph Myra, K1IV, attended this important board meeting and took copious notes.

Mr. Baxter also attended as well as a number of other engineers, observers, board members, and their attorney from the Maine Office of the Attorney General. Mr. Baxter could only observe and was not allowed to speak at this stage of the standard Maine Rules of Administrative Procedure.

The Complaint Officer, Stephen W. Cole, P.E., presented the 18 inch thick file in this case to the Board and there was robust discussion and debate among board members for about 90 minutes. The Assistant Attorney General stated that she had spent many months and countless hours on this "Complaint" by Mr. Crow, and the Complaint Officer indicated that he had done the same. One board member, William A. Lotz, P.E., (all board members are licensed Professional Engineers) stated that this case reminded him of the Ken Starr investigation of President Clinton where the net result was to find some presidential semen on Monica Lewinsky's dress.

"The board was presented with reams of incorrect and false evidence," according to Mr. Baxter, "most notably, false and misleading testimony by the Code Enforcement Officer in Augusta, Maine who has been under investigation by the Fire Hazard Reduction Institute, a bona fide safety organization where I serve as its Executive Director. Based on this false and misleading evidence, the Board wrongly concluded that our 2003 Complaint to the Board about the Professional Engineer who approved the out of code building plans for Ray Bouchard's new building at Light of Life Ministries and Christian radio stations was improperly made, and the Board voted to offer to settle the matter by asking us to sign a consent agreement admitting "improper action" and to pay a $1,500 fine. The alleged improper action was filing the Complaint after being told by the Code Enforcement Officer that the Bouchard fire trap met state fire codes. Exactly the reverse was the case. The building did not, in fact, meet state fire codes; it is

a fire trap in our Professional Engineering opinion," Mr. Baxter went on to say in an interview. "The Code Enforcement Officer admitted to me that the building DID NOT meet the code and that he had issued a 'waiver.' Our formal Complaint against the Professional Engineer who approved the out of code building plans is entirely appropriate. Assistant Attorney General Judith Peters now agrees with me on this very important point," Mr. Baxter went on to say.

After Ralph Myra left the meeting, the Assistant Attorney General and the Board's Executive Director, Warren Foster, P.E., granted a Baxter Motion for Discovery and he (Baxter) will be allowed to inspect and copy the entire files in both cases including hundreds of E-Mails.

Mr. Baxter has filed (by FAX) the attached reply affidavit with the Board and the Maine Assistant Attorney General, Judith Peters. "Ms. Peters called me right back," Mr. Baxter said, "and it looks like we will be able to get the entire and bogus Crow "Complaint" dismissed. She wants to meet with Stephen W. Cole, P.E. (the Complaint Officer), and me in about two weeks to discuss these new facts which have just been brought to light and for possible final adjudication at the next Board meeting in six months.

If we do go to a full hearing before the Board, Ms. Peters confirmed that I will be allowed to subpoena whatever witnesses that I want to. After such a hearing, where Ms. Peters, an attorney, would be the Hearing Officer, the case (by Maine law) would go to trial in District Court." Again, Mr. Baxter would be allowed to subpoena whatever witnesses he wanted to.

"I am so pleased that the Administrative legal system and court system here in Maine are finally showing some robust signs of integrity; it is so great to be an American; it is so great to live in Maine. Let them eat Crow," Mr. Baxter said, apparently referring to the Complainant, Brian L. Crow, K3VR.

SNIPPED

AA does not agree with your reasoning on 'choose'.

If you need as little as one beer a year you ARE an 'acoloic' [alcoholic].

yes it does

as long as it is a mtter of choice it is not acholism check your facts
steve
>

so I don't ever need a beer or other acochol but i can choose to drink
when I wish or choose not to

It's also good if you have interference on a frequency. you can block that out but still let the radio traffic through if you have their tone programmed in.

Hey All,

TrunkPCR Version 0.7.184 is now available at the homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes 2 problems...
Jan 08,2006 - -----: Protection from Editing .Bnk file Frequencies.
Jan 23,2006 - Fixed: Repeat Scanning of more than 1 Bank in
Conventional Mode. Don't know when this happened...
Version 0.7.184 Released 01/23/2006

TrunkPCR controls the Icom PCR-1000 and PCR-100 Receivers...

Regards,
Jay

355. Icom IC-R5 or Yaesu VR-120D

I'm thinking of getting a new handheld scanner, mainly for listening to shortwave stations, the amateur radio bands, CB and airband. The above two receivers seem appropriate (and about the same prince in the UK - £140). I don't really understand the specs as to which is most sensitive. Anything else I should be looking for?

Any other suggestions for other makes appreciated.

Thanks
Pete

For shortwave, amateur HF and CB, handheld scanners are sub-optimal
performers. There are some nicely capable portable units, although not
in the walkie-talkie form factor, such as the Sangean 909, which are
much better performers in those bands.

Starting with the understanding that radio receivers represent compromises between sensitivity, and selectivity and front end overloading, the problem with the little receivers is that by the time you get enough antenna on them to provide good signals, you may also have overloaded them with either in-band or out-of-band signals.

As someone who appreciates compact things, it pains me to say this, but scanners are best at scanning, and shortwave receivers are best at shortwave. I use a BC246T for portable scanning, and a Sangean ATS-909 for portable shortwave. I would have much preferred to have a single unit that did it all, but as far as I know, such a thing (good enough filters, BFO at the right place in the passband, trunking) doesn't yet exist.

Anything
> else I should be looking for?

I don't think you'll be able to find a truly decent performer for all of the bands you want to hear in the size you want. These small receivers try to do everything at once, but unfortunately, they don't do it particularly well. Best to stick with a portable SW receiver for shortwave listening, and get a separate scanner for the higher bands. On a positive note, there are small portable SW receivers that work very well at a very reasonable price, and the same goes for scanners.

Hi.
I recently put a digital scanner online for those interested in
listening to Ottawa area Digital and trunked Systems..
Currently the scanner is set to recieve OPP (Ontario Provincial
Police) Digital Trunked system.. Its also set to recieve the city of
Ottawa Edacs system on 800 MHZ for Fire and some EMS as EMS are slowly
switching there system from standard VHF to trunked 800MHZ.

Any comments or questions can be directed to
ve3xiu@gmail.com..

BTW... The scanner is only online between 8pm EST and 6:00 am AS I
use it during the day in my truck.. Its also on all weekend long..

Almost. They should have added SSB for SWL! Without SSB, it's truly not full coverage.

381. AOR AR8200 MK3 software?

Newsgroup: rec.radio.scanner
Date: 2006-01-26 05:00:56 UTC
From: Adam Butler <adambutler100@hotmail.com>
Message-ID: <N4-dncavU6lVykXeRVn-hg@giganews.com>
Source record: 10311

What is the best software for the AOR 8200 MK3?

I'm familiar with Gommerts AR8200 app but have not tried it yet as I don't have a Win98 machine handy.

Any others that are good mainly for backing up the radios contents as well as loading new?

I'm not looking for a control app.

So far, the ones I have seen including the one from AOR do not allow any entries above 2.0 GHz.
I do not understand why the makers can't make an adjustment that will allow the entries above 2.0 GHz?
Even Gommert of Butel says he has no plans to support the 3.0 GHZ coverage of the MK3 version.

So, I'm looking for any other suggestions.

Thanks Everyone!

Yes, at work we have a lightning detection system that uses freqs in the
2.7 range.
The system has a remote sensor and transmits data back to the receiver for
analysis.
By default, the system hops frequencies which is normal but during a storm
event that contains local lightning, I have seen this system stop on a fixed
channel and transmit it's data plus wait for a reply from the receiver
before it hops again.
This is between 2.69 and 2.70 GHz.
When the receiver is locked, I can actually get a rs232 output and read
supposed lightning strike values.
I'm not good at interpreting the readings yet but to answer your question,
yes I do monitor frequencies above 2.0 GHz.

Forgot to add that my current receiver is a modified C band satellite LNB
with the output centered on 650 MHz.
This is fed into an Icom R7000.
Works well as long as you do the math.
I bought the AR8200 MK3 in order to eliminate the math!

40 watt UHF Motorola R1225 repeater with power supply.

Programmable from 438-470 MHz with built-in CWID (Morse Code) and
programmable repeater hang timer and time out timer.

Programmable frequency and PL and or DPL codes.

16 pin accessory connector allows the repeater module to be connected
to other equipment.

I can program this repeater to your frequency and PL/DPL code.

$ 999.00

Remove x's before responding.

This appears to be something that anyone with a saw and a few scraps
could make in half an hour. The "friction" mount and the rough fit and
finish contribute to this impression. What makes it worth $70?

413. A Space Suit with a 145.990Mhz FM transceiver!

Newsgroup: rec.radio.scanner
Date: 2006-01-29 20:15:04 UTC
From: CQ <geenmail@geenmail.net>
Message-ID: <43dbd0ca$0$12846$ba620dc5@text.nova.planet.nl>
Source record: 10333

Hello All,

At Friday 3 februari 2006 will be SUITSAT launched -
from out of the ISS Space Station into space.
In the Space Suit is a transceiver which send voice
greetings in various languages.
Also SSTV pictures (mode: robot 36) will be send
down to earth.
For those who received the SUISAT signals can
request a special certificate!

Probably you can receive Suitsat with a simple GP vertical.
Better is an yagi (or trie both to switch).
I hope amateurs will report here how strong they receive
the suitsat signals (and what antenna you have used).

More info you can see on amsat or:
http://pd0rkc.ontwikkel.nl

Please publish this message on websites (unique event!).

73's Cor PD0RKC

Whether you can modify the radio to pick up the frequencies or not,
you can't modify it to pick up the signals of anything other than
analog cellular, which is almost non-existent, except in the
boondocks.

Not everyone lives in a thriving metropolis... Some of us live in larger cities where that are still plenty of analog calls. Even my own phone drops over to analog once in a while. It depends on where you are, but seems to happen most when using it indoors...

Since I am kill filing this thread (and many others) anyway.

just a word of advice, your ISP is now aware of your intent. should you
carry it out, I am fairly certain that they will take action against you
for failing to abide by the Terms of Service agreement you have, as well as
the Acceptable Use Policy you agreed to.

do it and you'd better find yourself another ISP.

That depends on what you want to listen to??? For Police/ Fire that is not
Digital the BC246 is a great scanner. Runs $200.00 on line. If you want to
listen to Digital both Radio Shack and Uniden offer both hand held and table
top models for it assuming the agencies you want to scan can be scanned.
They are going to run about twice or more as much.

Source record: 10214

Hello:

Live about 20 miles due west of Logan Airport (Boston)

I can hear the planes calling Logan just fine, but never, never any comms
from the
Tower, or the facility that hands off the planes to the Tower.
(forget what it's called; BTW: what is the proper name of ?)

Isn't the transmitted cone of the signal originating from the Tower, or the
other facility, wide enough to encompass
the 20 miles ? How come I can hear the planes so well ?

Thanks,
Bob

It all has to do with line-of-sight between antennas. Someone will be
along shortly to elaborate.

It is, but it's aimed upward (which is where you find airplanes).
Since you're on the ground, you're under the pattern, so you don't
hear anything.

> How come I can hear the planes so well ?

Line of sight, and their antennas are aimed downward.

My 1st time posting to a newsgroup but I would like to throw my 2 cents in here. I do not, nor am I acquainted with anyone that works for Radio Shack. I am a novice as well, with the same testing equipment (my ears and what my scanner can receive). I received a PRO97 as a gift in November and I'm now hooked, I enjoy scanning more than I thought I ever would, even with the learning curve required for the trunking AND all of the mis-information available to newbie's. That said, I agree with alexx1400 100%. I have used 2 other non stock antennas, one being the Radio Shack antenna discussed here on my PRO97 and on a PRO92 that belongs to a friend. The 800MHz RS antenna improved the reception a great deal on both scanners in the same frequency range that alexx states, and in the case of these 2 scanners, the "150 range" reception also improved, so much so my friend also purchased the identical antenna, however, neither radio has any reception in the lowest range which neither one of us cares about. Maybe the area I live in (Hudson Valley, NY) has something to do with the improvement with the antenna, I don't have any technical spec's one way or the other, but I must say that neither radio has any signal without the antenna, nada. At this point both of us are satisfied with the gain in signal strength and clarity that the RS-800MHz antenna provided over the stock unit and feel the $ was well spent. Could it be the area that you use your PRO95 in has anything to do with having such a great signal?

443. PRO-99 Deluxe

Newsgroup: rec.radio.scanner
Date: 2006-02-02 20:20:33 UTC
From: Me <jones@juno.com>
Message-ID: <3cq4u111lu5kgbpv95fg9gpe4d77aa00b7@4ax.com>
Source record: 10223

i recently bought a PRO-99 Deluxe for my wife and i to use trackside
for nascar races. We first used at Lowes last fall and we were
dissapointed with the volume level (even with the right headphones)
I am hoping it was just where we sat at the race (under an overhang
that probably echoed the sound) Another thing that was confusing was
after porgraming in all the drivers and their alternate freq's we were
unable to get the scanned to automatically scan to another freq
without changing the chanel manually. I have read the manual from
front to back with no answers to this problem. Any suggestions???

Glad it worked for someone else. I too am not even close to being any kind
of expert at this. A friend of mine bought a 246 on my recommendation and I
set it up for him. When I was doing it I had my 246 and my Pro-95 going. I
tried the no antenna and on the Mot. 800 all 3 would receive some, with no
antenna, but it was very spotty. One the 150's where the County Police are,
there was Nada on all 3. The guy bought a RS antenna on my recommendation so
we could try 2 of the same scanners side by side. The 246 with the RS
antenna was noticeably better on the 800 with the RS antenna. On the County
channels I could tell no difference even though RS had also warned him when
he bought his 800 antenna that it would NOT work with them. I "guess" the
sales people at RS must be told to say this as they must have gotten some
returned for this reason? Don't know as the people I have talked to there
seemed to know a hell of a lot less than me about scanners which is pretty
damn bad for someone selling them. The great thing about RS is if you buy
one in the store, and you can't tell it works any better they will take it
back, so you have nothing to loose trying it.

From: Paul Hirose <jvcmz89uwf@earINVALIDthlink.net>
Message-ID: <JHwEf.9758$1n4.438@newsread2.news.pas.earthlink.net>
Source record: 10225

The Space Station crew has to dispose of an old space suit, so they
are going to use it for an experiment. It's been equipped with a radio
transmitter to broadcast greetings, data, and a slow scan TV image on
145.99 MHz. The batteries should last for a few days. Plan is to
jettison the suit Feb 3.

http://www.spaceref.com/news/viewpr.html?pid=18900

According to one of the links, the transmitter output will be half a
watt.

Dear Bill N8JOS:

An alternative to using the Genesee County control channel (with attendant distortion) is to use the Owosso control channel (if you are on the west side), a Saginaw control channel (if you are up north), or the Holly control channel (if you are in the south part of the county). Each of the near-by systems has much reduced distortion and "carries" most of the Genesee County traffic.

If one is in Burton, I do not know what will work.

I am using a BCD396T with a RS 800 MHz (whip) antenna.

Regards, Mac

I agree,

I have been using two scanners since 1990 something. One full
coverage one trunking. only thing missing as mentioned is ssb.

but it's nice to take one radio and get "almost" everything available
from 0.5 to 1300.

does anyone know info about the predicted flightpath and orbit schedule of satsuit? I'd like to listen for it but I understand
there's only 5-10 minute window depending on your location. Thanks for any help.

Airport ground comm antennas are not specifically aimed up and aircraft
antennas are not pointed down, they concentrate the signal toward the
horizon. The tower can easily communicate with a high altitude aircraft
to 250mi or more with just a few watts. Your local airport may have
their antenna fairly low and you may have obstructions between you and
the airport and raising your antenna may make the difference. I can pick
up all my local airport ground comms at about 20mi fine with a Discone
at 35ft and there are serious hills between the airport and me.

The crew is scheduled to EVA at about 4:30 this afternoon and deploy
the "suit-sat" at that time.

If you want to track the ISS try this link:
http://science.nasa.gov/realtime/jtrack/3d/JTrack3D.html

If the ISS / suit sat is in range there will be doppler effect to the
transmitted signal on 145.990 mHz. To compensate set the receive
frequency a little higher on the incoming pass to say 145.995. Then
when the sig gets noisy try to decrease freq to 145.990 and then when
it gets weak again decrease the freq again to about 145.985 as it is on
its outgoing pass. This will alow you to hear the suit-sat longer.

Looks like it will only be on north america in the early morning
though.

Have fun, and good luck listening.

Don

461. ALL THE NEWS THAT IS FIT TO PRINT- 'Ron Haraseth' APCO FAILS

ALL THE NEWS THAT IS FIT TO PRINT- 'Ron Haraseth' APCO FAILS
==========

From: (removed as per senders request)
Sent: Thursday, January 26, 2006 8:43 AM
To: 'Ron Haraseth'
Cc: 'presid...@apco911.org'; 'pres-el...@apco911.org';
'first...@apco911.org'; 'second...@apco911.org';
'past-p...@apco911.org'; 'fi...@apco911.org'
Subject: Those of us in Public Safety caught in Wave # 1 in Rebanding
Importance: High

1-26-2006

Ron,

I tried to call you this morning & had a conversation with Michelle
Fink. She is a very good person as she listened to what I had to say.
I appreciated that.

Ron, IMHO, I do not feel, as an APCO member, that APCO has really
represented us in a way to bring group power to each individual
Sprint-Nextel / TA negotiations for Public Safety in the Wave #1
Rebanding - from my point of view!

I have talked with East Coast Engineering Consultants who are enduring
- as we have - prolonged negotiations with Sprint-Nextel & the TA. I
have heard of Sprint-Nextel challenges to an Engineering Consultants
projections, that a task will take 350 hours, & Sprint-Nextel coming
back with a statement, that it should only take 20 hours!

Months ago I pointed out to the TA their time event timeline chart did
not include the "Mandatory Negotiation 30 day window for Wave #1 ending

2/8/2006!"

Months ago (this is in a recorded TA Webinar) I asked the TA, " What
do
we do if delay becomes a negotiating tool?". There was silence for a
time, & the TA replied, "Get on the Web, or Fax us & we will become
involved".

At this time - even though our single point of contact has done
everything to attain a Pre-Planning Funding signed contract - we are in

"Mandatory Mediated Negotiations" with a 2/8/2006 deadline. I have
been
told we are very close to Sprint-Nextel negotiations of a contract? If

we do not arrive at a signed document, you know how serious a situation

my State will face.

Ron, Washington State didn't have the upfront funding to immediately hire our Consulting Engineer (IBI Group, Portland, OR.), or Robert Gurss our Communications Lawyer specialist. So, we had to disclosed all

details up front to arrive at hoped for funding to even begin to analyze
the now suggested frequency's to vacate in the General 800 MHz band, that the Mandatory Mediation TA is saying "Can Oregon use these to go on
& are you off them as yet?" I suggested to our single point of contact to in writing , to express our "Good Faith" efforts & that Washington State was willing to abandon TA questioned frequency's if Sprint-Nextel

would give us mid-band frequency's in exchange. I do not know what frequency's have been, or are being suggested we go to from Sprint-Nextel. I do not know how Mutual Aid Washington frequency's are being addressed. I don't even know the proposed terms of a contract with
Sprint-Nextel & the Mandatory Mediation TA as yet!

I feel Sprint -Nextel is nationally going beyond good faith in such a way that could well make it impossible to "Make all Parties Whole". I feel it is important, that Sprint-Nextel is included in being "Made Whole". Sprint-Nextel must understand a partnership with Public Safety that MUST succeed!

Why do you say this you might ask? Well, if our National Public Safety is required to certify that Rebanding is done at minimal cost, & then to
have a party consider this as a point to negate, or negotiate down, it can very well be perceived as seeing our National Public Safety as being
"Liars"!

I have heard, that no one in Wave #1 Oregon has a "Pre-Planning" funding contract signed as yet! This is VERY SERIOUS as the window ends

2-8-2006 !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

In addition to all this the "Other hand" of the FCC has activated the Automated Construction notice deadline of 1/1/2006! Where is APCO when we are engaged in the Rebanding struggle? We don't need to have this during Rebanding! It is another resource demand on Public Safety, where

we are already over loaded with Rebanding! APCO should work to buy us more time!

Please take my remarks anywhere it does good for the order of APCO & those of us in Public Safety.

Thanks for allowing a release of my personal in the trenches point of view on actual circumstances here.

Very Sincerely,

(Name removed by senders request)

If you have access to info about the ISS, it's basically the same
orbit.

You don't need anything special to hunt for bugs - just scan the
appropriate frequency ranges.

The red line is the orbit of the ISS - the ISS itself is where it says
"STATION". At the time I'm writing this - about 7:53 PM EST Friday
evening - it's over the southern tip of South America.

If that's just an example, channels are now being split, so there are
channels at some 500 Hz increments. If it's an actual frequency, I
could be wrong, but I don't think it's a legitimate channel.

Great little scanner for its day.
I really don't see what grounds it would have to claim Milair greatness over
the, say, AOR 1000 line or my current handheld, the Alinco DJ-X2000.

ah yes thankyou I'm getting it now.
when I first looked the station was in grey and no-where near the red line which I found
confusing. Later I realise it was out of
sight - on the other side of the globe and it's now showing in white passing over NSW in
Oz.. Its orbit doesn't show it going near
the UK though (sob).

Unfortunately, SuitSat was a bust. It stopped transmitting after only two orbits, ostensibly because the batteries got too cold.

480. SUITSAT received on Africa (audio file).

Newsgroup: rec.radio.scanner
Date: 2006-02-04 16:56:25 UTC
From: CQ <geenmail@geenmail.net>
Message-ID: <43e4dcba$0$2018$ba620dc5@text.nova.planet.nl>
Source record: 10160

Hello All,

Keith (ZS6TW) received at 4 februari (12:45UTC) SUITSAT on 50 degrees
elevation.
Keith could hear Russian language from SUITSAT.
The equipment ZS6TW used:
Transceiver: Yaesu FT-847
Antennas: 2 X F9FT 17 elements yagis (16dBd gain).
Keith reported that it is importand to use FM narrow to
receive the weak (narrow) signals out the noise (doppler correction is
requered!!!).
He received SUITSAT at the same place as ISS, so the
Suitsat was (at 4 februari 12:45UTC) not far behind the ISS.

The audio file is for public use so spread arround the world!

73's Keith ZS6TW
The audio file you can download from PD0RKC website:
http://pd0rkc.ontwikkel.nl

>Al, what frequencies would you find most bugs?

That's like asking on what channels you find most TV stations on. I've heard bugs on AM broadcast, I've heard bugs on 2.4 GHz, and everywhere between. There are a lot of commercial bugs at the top of the VHF-hi band, in the 160-174 MHz range, but more and more they're going to 2.4 GHz, 5.8 GHz and internet (direct wired, so there's nothing to scan). A frequency counter with a wide-band pre-amp in front of it is the best bug hunting tool, or without the pre-amp if you're sweeping a fixed area. (You can use the Close Call of a scanner for sweeps too.)

They're not scanners, they're wide-band receivers. The Uniden 330 gives you the best of both worlds if you don't need digital, although I prefer my 396.

Can anyone help me out?

I have often parked close to the airport and seen people using scanners and
it has peaked my curiosity.

I know nothing about the subject of scanning but would like to learn.

My questions are: Where can I buy a scanner?
How much will it cost?
What can I listen to?
Do I need lessons or training?
I heard that the police use Digital, can I
buy a digital scanner in canada?
Is scanning a worthwile hobby?

Any comments appreciated

Thanks
Steve

I'm looking for a better antenna for my dj-x3 to be able to receive signals better. It would preferably have to cover the whole range of the X3 (0.1-1300MHz) as there are frequencies all across it's range that I listen to. I live in a flat so roof or wall mounted is not an option but I would also like to be able to use it in the car and it not be too expensive.
Thanks

>(0.1-1300MHz)

Aside from advertising hype, there's no such thing. Or, rather,
anything that conducts electricity will act as an antenna, but it will
only act as a good antenna over a relatively small range of
frequencies. (Even a multi-band antenna only works well over a small
percentage of the range you posted.)

>I would also like to be able to use it in the car

Remember that, to have any efficiency at all, an antenna has to
reasonably approach 1/4 wavelength of the frequency it's receiving.
(Even 0.1 wavelength will give you some reception.) At 0.1 MHz,
you're talking about a wavelength of 9,835 feet, so the shortest
antenna that has any hope of working is going to be almost 100 feet
long - hardly something you can use on a car.

Hello:

Have an aero utility type question:

Re all these "Huntress" frequencies that one sees:

Exactly what are they ?

Are they all Norad related, or also for general USAF usage, or... ?

Which are the most popular/used in the northeastern U.S. ?

Thanks,
Bob

493. suitsat's scheduled positions

Newsgroup: rec.radio.scanner
Date: 2006-02-05 14:10:32 UTC
From: tg <tg@nospamevereverever.net>
Message-ID: <43e607d6$0$4995$db0fefd9@news.zen.co.uk>
Source record: 10173

I've been searching without success to determine if/when suitsat will be passing over the UK. I can see where suitsat is now (at http://science.nasa.gov/realtime/jtrack/3d/JTrack3D.html) but haven't been able to find any predicted flightpaths. Watching the
flight at http://science.nasa.gov/ I was expecting suitsat to pass over or near the UK in the night while I was sleeping, so I
left my scanner on and recorded the audio. My recording log shows a brief noise at 3:42am GMT, lasting about half a second, and it
picked it up on 145.985.
Was this suitsat?

I bought a splitter booster at Radio Shack that helped some. I was disappointed in the volume also. My Pro 43 had a lot higher volume, but it used more batteries too. I had the problem with the scanning too, but it was in the way I had it set up. I'll have to check back to see how I got it to work. Not very user friendly.

Some of the large, multi-section, multi-band ham antennas like the RH77CA and AL-500H are much better than the stock duckie, but they were really designed for a few specific ham radio frequencies. The fact they work better than stock is more a testament of how bad the stock antenna is, not that the others are that magical on odd off frequency bands like VHF and UHF mil air. There is an antenna specifically designed for the 90 to 512mhz band that does work consistently well, especially in the VHF and UHF air bands, which lie in the middle of its working range. If you are lucky you can find one surplus for a cheap price like I did. The antenna is a 14ï¿½ long rubber duck made by Thales (Racal) for the PRC-148 MBITR multi-band hand held. It costs around $245 new (P/N 3100662-501) and you have to change the BNC connector on your scanner to TNC or use an adaptor. I have used one of these antennas on 2m, 220 and 440mhz amateur freqs and it works noticeably better than the supplied antennas with various hand helds I have compared it to. It also pulls in VHF and UHF air way better than the stock duckie on my PRO-43, which is what the original post is about. You did ask what is the best, didnï¿½t you??

Another possibility is a telescopic antenna - just adjust it for 1/4
wavelength on whatever frequency you need.

Bob,

HUNTRESS is the callsign for NORAD's Northeast air defense SOCC (Sector Operations Control Center). There are tons of frequencies listed for this and the other NORAD SOCCs, many of which are undoubtedly obsolete, or just plain wrong. Regardless, active frequencies will vary with time of day, interference, and participating stations.

Personally, I monitor 364.200 (AICC) and guard (243.000) regularly, and don't worry too much about all the frequency listings - I've had better luck plugging in squadron/wing common freqs for individual units than trying to scan dozens of frequencies from internet listings that are often a few decades old.

A good place to ask this question might be the MILCOM reflector on qth.net .

Note that the SOCCs were formerly known as ROCCs so if you're looking at a list that shows these as ROCC it's probably been awhile since the last update. ;-)

Hi Wally: I live in Calgary, and been into scanning for about 17 years.
It is a very worthwhile hobby. You can get scanners at "The Source by
Circiut City" (formally Radio Shack). They have one for 200 bucks, and
another for 500 dollars, plus GST of course. You can listen to just
about anything, including air, trains, taxis, fire, EMS, RCMP , in fact
almost any mobile radio systems. You do not need lessons or training,
however if you have questions, this is a good newsgruop to use. As for
a digital scanner, I'm not sure if any are available in Canada. You
may want to visit my free website @ www.geocities.com/burgessfred33. I
have an extensive list of frequencies. Another good website is
www.radioreference.com.

Can't you just get up during the night to listen? It is a rather rare opportunity, after all. Get everything set up ahead of time so you don't go waking the wife and kiddies with your crashing around in the dark!

do what i am going to do
leave the scanner squelched upon loud volume or
these 2.4GHz retransmitters for tv are quite good also.
or if your not near a scanner connected to an outside aerial....
just use a small tv in the bedroom and retransmit just the scanner audio via
the rca phono socket.

If you receive the "repeated" signal, that is no big deal. People have been listening to the ISS for years on two meters.

Only a relatively few people have picked up the signals coming from the Space Suit.

>yes but connected to what kind of aerial?

Probably the little rubber ducky it came with.

But, yes, with 11 elements and good front end sensitivity (not a
scanner), the suit signal is still barely out of the noise. Then,
again, EME signals are usually much weaker than the suit signal, and I
believe Sam Harris, W1FZJ, was doing EME around 40 years ago - with
tubes. It's not like it takes $10 million worth of equipment to do
this - 2 broom handles, some 1X2 lumber, 2 U-bolts, some coax and some
copperweld wire (or wire hangers) shouldn't cost more than US$10 - but
a 5 or 6 element quad has a lot of gain and it's easy to swing around
by hand.

If it is putting out 1/2 watt (+27 dBm) uniformly in all directions (0 dBi transmit
antenna)
and is 400 miles away, and your little rubber duck is about a 0 dBi antenna (probably
close),
your receiver will receive it at -105 dBm. That should be quite easy to receive.

Most likely the antenna on the suit is *not* putting the signal out in all directions.
You may also want to hear it for more than the minute or so it is going directly over you.

Oh, a "normal person" can easily build better antennas and hook them up.

Alan

oh well you'll pick up sweet FA on that. Ya gotta have the metal in the sky barky, loadsa metal going up and up....
then you'll hear things. I've got a hand held as well but it doubles as a powerful little base station when it sits on my desktop
connected to my external aerial and PC.

Something weird is going on. On Radio Reference, in the Michigan forum, they're suddenly able to receive Detroit's Site #701 on Radio Shack scanners, but none of the Uniden models...so they say. I'm still looking for facts, as it's just a few claiming this right now. Go back and look over the post. Tell them what you've been though with yours.

Next time I will listen to one BEFORE I BUY !

I am Not in Detroit, I am in The Flint, Mi Area (Genesee County)
But I will go look at the posts

Less than -3dbd? I doubt that. It's probably closer to -6dbi. And
that's only if it's being held normal to the suit.

> Most likely the antenna on the suit is *not* putting the signal out in all directions.

From the tumble I've seen, it's definitely directional to some degree.

Perhaps, if the received frequency varies because of doppler effects.
For weak signals like that, you may need to have your squelch open to
hear if there's anything there at all (if the signal isn't strong enough
to break squelch).

> I've been recording overflights and so far haven't heard anything
> with my Pro-2067 and a 30' high discone on my chimney.

You'll have better results if you're able to turn the discone on its
side (when vertical, it has a horizontal donut-shaped pattern of max
sensitivity).

Beer is one of the basic food groups, so it fits where you eat -
during Radio, I guess.

Sex ... er, Work? Sleep? Or, considering that Radio is
entertainment, ... [this is a family usenet].

Football doesn't fit into my life, so you'll have to do that one
yourself.

>Any additional chances if I scan at 145.990 WFM (not NFM)

Depends on your definitions. 75 KHz vs. 5 KHz, or 5 KHz vs 2.5 KHz?

If the former, you'll lose too much effective sensitivity with WFM. If the latter, the signals are 5 KHz, so that's where you should be.

The only option to changing frequency to allow for Doppler is to have a receiver with really good, wide AFC - which you aren't going to get for 3 digits of money.

>I've been recording overflights and so far haven't heard anything
>with my Pro-2067 and a 30' high discone on my chimney.

>(75' of RG6)

That's about -2dbd gain with a fairly insensitive receiver, while you need about 10dbd gain with a sensitive receiver, so you're about 18db below where you need to be to receive a noisy, in-and-out signal. 18 db - that's nearly 100 times more gain that you need, or looking at it the other way, the signal's probably below the noise long before it even gets to your cable.

I tried hearing the signal with a turnstile (which is plenty good enough for weather satellite work) and a fairly good receiver. Nothing. That's about 8-10 db better than a discone and a RS scanner. The ISS is a LOT easier to receive - much more signal - so try for that first.

Message-ID: <1139515732.804942.270390@z14g2000cwz.googlegroups.com>
Source record: 10118

Hi everybody,

I would need some pointers with the following issue:

I am taking my kids to a State Chess Tournament in Miami in which 1000+ kids will be staying at a local Sheraton hotel. Considering how unsafe Miami is, I would feel much better if I could listen to the chatter of the Sheraton's security service during this 2 day tournament. I have read that some hotels use frequences in the 400MHz range while others use frequencies in the 150MHz range. Since this is a major hotel I will have a hard time figuring out who is who just by scanning these two bands (not to mention that security is the one service *least* likely to transmit much until something is already happening). I even though about calling the hotel, but considering that they will house over 1000 kids they are most unlikely to agree to give me their frequencies.

Since I am using a Radio Shack PRO-97 I might also get a picture of what is going on by using its Signal Stalker II, but again I fear that I might get pretty much everybody except security.

Any ideas as to how I should takle this issue? Is there a way of finding out at least in what frequency range I should be looking?

Many thanks,

Nope - its not the Bal Harbour, its the Sheraton Miami Mart Hotel (711 NW 72nd Avenue Miami, Florida 33126 United States) right next to the Intenational Airport.

Sorry - I should have been more specific.

I did not find it in the database you suggested, but maybe I did something wrong. Also - what if they use frequencies which do not requiere FCC licenses (say FRS or MURS)?

Any ideas?

Thanks,

VS

PS: when I find out I will come back and post. We do need to know ;-)

I searched a bit more too. Nothing. ;-(

I even tried with Lat/Long here:
[25.46.35 Lat 80.18.45 (Deg.Min.Sec)]
http://tinyurl.com/dwgag

> Also - what if they use frequencies which do
> not requiere FCC licenses (say FRS or MURS)?

I suspect they would not be on any list then? You'd just have to
search within the freq ranges.

> Any ideas?

I wonder if all the local Sheridan's share the same frequency (and
the same license). Maybe the Bal Harbour is the licensor for all
locals. Maybe they share the same (subcontracted) security service?
Maybe you could gather all the FCC listed freq's for Sheraton's.
(I'm just guessing here, maybe someone more knowledgeable can offer
some more informed advice)

> PS: when I find out I will come back and post. We do need to
> know ;-)

Good luck. Let us know if you hear anything fun.

(Last Christmas someone called the police because "someone was
messing with their Christmas reindeer". Soon after the policeman
arrived on scene he reported "the reindeer are no longer
fornicating")

I love scanning. ;-)

For that, the dispatcher says "negative 10-29" or simply "negative 29"
for all agencies around here (northern Alabama). If there is a warrant,
it'll be something like "29 in hand for..." or "Multiple 29s as follows..."

543. Re: AOR AR8200 MK3 software?

Newsgroup: rec.radio.scanner
Date: 2006-02-11 01:03:59 UTC
From: Adam Butler <adambutler100@hotmail.com>
Message-ID: <MqydnVMTDsGdpXDenZ2dnUVZ_sydnZ2d@giganews.com>
Source record: 10123

The lightning detection system itself is made by a company called Thor
Guard.
The theory of that part I'm familiar with.
The system as supplied by Thor used a 920 MHz data link which linked the
"detector" too a remote alarm or display unit.
This remote unit displays in a crude way, different values which determine
if lightning is possible.
That part still works and only the radio link between the remote sensor and
the display has been changed.
In our case, we already used many frequencies in the 928 MHz band which
interfered with the Thor Guard's remote operation.
So a local Avionics engineer designed the system on 2.7 GHz.
I think it actually required a license from the FCC as it no longer operated
in the free 928 MHz. band.
I may be able to get some fcc numbers from one of the receivers but I don't
think it was ever commercially available. may have even been an experimental
license.

The person who set it all up passed away a few months ago and I'm trying to
understand how it works!

Where did you find that the Maldol AL-500H was designed for ham radio? All references I find on the web clearly state it is designed for 116-174MHz and 230-360 MHz aircraft bands. There's also no mention that they're even suitable for use on 2m/70cm amateur ham radio bands.

I received a Radio Shack Pro-97 for Christmas and it appears to be a pretty good radio.
I also got a guide book with cd-rom from radio shack and find it to be less then adequate when trying to find the correct information and frequencies in my area.

Does anyone out there know of a good source to look up frequencies in the Chester county area of Pennsylvania, either on the internet or some publication?

The help, as always is greatly appreciated.

Without a doubt, the database at Radio Reference is your best source! Also, if you're using Don Starr's Win97 programming software with your PRO-97, and you make a small donation to "RR", they will enable you to import frequencies directly into Win97, for uploading into your radio! You can't beat that! RR is also an excellent source of good, up-to-date information, and assistance from other's in the hobby...without the riffraff! (well ok, maybe sometimes there's a little riffraff).

http://www.radioreference.com/modules.php?name=RR

Radio Shack 19-1210 Business Band Mobile Transceiver.

VHF - 2 Channels - 5 Watts - With CTCSS.
Will include a Service Manual on CD-ROM that also has extended programming instructions.
Dip Switch programmable for VHF High Band use.
Radio and Microphone included
I have 2 units:
One in box with Owner's Manual and homebrew power supply - No Mounting Bracket.
One with Mounting Bracket and power cord - No Owner's Manual
Both include Microphone and power cable
$25.00 each

****

11 Channel Elements in 460MHz range.
Bottom plate is removed (but available)
lock intact - Bottom may have been pried off

Also have control heads that look like they went with these, but not familiar enough to tell. Also 3 Motorola Microphones. I don't have any need for these, but got them in a trade.

****

AOR 1000XLT Wide Range Monitor Receiver

Handheld Unit
500 MHZ through 1300 MHZ (continuous coverage)
AM / FM / FMW (WideBand)
1000 Channels - 10 banks
$100.00 OBO

****

Kenwood Sirius Satellite Radio

Kenwood Tuner, Display unit with RF Modulator and Terk antenna.
Removed from car when traded in. Antenna will need a re-mount kit.
Have Original packaging and documents. Bought New around 2003, and traded in car later for one that had Sirius already installed.
$50.00 OBO

****

Standard Horizon 6 Series Marine HT

No Battery
Comes with Antenna and Destop Charger
Has Crysytals for Channels 6 and 16
Fairly Clean
$15.00

****

Motorola Radius p50+ HT

Has DTMF Pad, Standard Charger - HTN9046B with Wall Wart
Currently on 151.685 MHz Simplex - No PL
Belt Clip mount is broken on rear.
Radio squeals when first turned on, but seems to operate normally after that.
Battery holds some charge, but will need replacing.
$40.00

****

Optoelectronics Scout 40

- Needs repair -
Rapid charge not working properly, but charges on slow charge OK. Battery still holding good charge. Sensitivity is way down as a result of exposure to a stronger RF Field than the front end was designed for. Unit still comes on, display and switches all work, just very low sensitivity. (IF I Recall Correctly, a 1v signal above 450 MHz would register). Overall, in

good condition. - These sold for $350.00 to $400.00 new -

$50.00

****

Icom IC-R2 Receiver in very good Condition.

This is the Export Model and is the same as the R2-07-GOVT model

$100.00

****

Skutch T-51A / 3 - Line Swinger (Telecomm)

This is an intersting device that is used to route 3 lines to one device
(phone, answering machine, modem, etc).
It will automatically pick up the first line that rings and send a busy
signal to the remaining two.
Useful in a small business during lunch hours or similar situations. Very
unique. In As-New condition.

$10.00

****

Curtis Electro Devices Model ESNR-5900

Analyzer, Antenna, Charger and Manual for a similar model.
Used in Cellular sales to ID phone information prior to programming a used
phone.
Will read ESN ONLY after initiating sequence on phone in near field. Will
not snarf pairs for illegal use.
This is a basic, low-power cell-site. It emulates Cell-Site operation
within the AMPS service to initiate
communications with a cellphone within a very short distance in order to
extract info necessary to reprogram/reactivate that phone.

It will not read any phone information unless the phone is close by, and
only after that phone has dialed an non-compatible number sequence, that
will not result in an completed call.

This is not an illegal monitoring device; it was marketed as a sales-support
tool for cellular dealers - Cira 2nd Quarter 1995.

This is in a case that is 9"H x 6"W x 2"D and weighing 2 pounds.
Original retail to cellular sales outlets was $1295.00

Make offer or trade via email if interested.

****

All items are U-Ship from 31523 - Brunswick, GA.

I charge actual shipping cost, and will ship via USPS Priority on lighter items of FedEx Ground/Home Delivery on heavier ones.

I will accept trade offers on Ham gear, Receiving gear, other electric items.

Contact me off the NG @ kd4nue@gmail.com or dalite01@gmail.com or address in the header (if shown)

From: vineyard_saker@yahoo.com
Message-ID: <1139681495.909544.203090@g44g2000cwa.googlegroups.com>
Source record: 10128

Hi,

Thanks for all the info. Did I mention I was a total newbie? Because here is my follow up question:

I found this info on the net about this hotel:

461.15000 466.15000 WPSH615 RM 346 DPL Sheraton Miami Mart Hotel - Housekeeping FM

What does that mean? Which frequency are they using, 461.15000 or 466.15000 or both? Also, what is the "RM" type? Lastly, what is "tone" of 346 DPL?!

My PRO-97 has the following modes: AM, FM, CT/CTCSS, DC/DCS, ED/EDACS, MO/MOTOROLA, and LT/LTR but no "RM" or "DPL" modes. I am very confused and hence *my* mode is "SOS" :-(

Besides, the mode used by the hotel is "FM" so what is all this RM and DPL all about?!?!

I love scanning too, but I will love it more once these things become clearer in my head.

Thanks for any pointers,

TN

> is "tone" of 346 DPL?!

Probably both frequencies.

I'm unsure about the RM.

DPL is Digital Private Line:
It's a way for multiple user-groups to use the same frequency but
not hear each others conversation. It's an inaudible signal
transmitted "on" the main transmission. It informs the radio which
group the transmission is targeted for. Example: Police and Fire
can use the same frequency but mask-out each others conversions.

http://www.strongsignals.net/access/content/new_user.html#SEC09

I'd program both 461.15000 and 466.15000 into your radio.
Set both to FM, and ignore the DPL stuff.

> I love scanning too, but I will love it more once these things
> become clearer in my head.

It takes a bit of time, that's for sure. ;-D

Here's some links:
http://www.strongsignals.net/index.cgi
http://www.radioreference.com/
http://www.monitoringtimes.com/

Also do you have some programming software? I don't have a Pro-97
but I use this to support a friends scanner.
http://www.starrsoft.com/software/win97/default.asp

> Thanks for any pointers,

Keep asking. There is a wealth of info in this group.

>466.15000 or both?

The portables transmit on 466.15 and listen on 461.15. The repeater (probably up on one of the enclosures on the roof) listens on 466.15 and retransmits (in real time) on 461.15. It's called a repeater. If you listen on 461.15, you should hear everything.

> Also, what is the "RM" type?

Repeater.

> Lastly, what is "tone" of 346 DPL?!

If you have a scanner capable of decoding digital PL, and you set it to 346, you won't hear anything else that may be using that frequency. Otherwise ignore it.

>My PRO-97 has the following modes: AM, FM, CT/CTCSS, DC/DCS, ED/EDACS,
>MO/MOTOROLA, and LT/LTR but no "RM" or "DPL" modes. I am very confused
>and hence *my* mode is "SOS" :-(

So you *can* set it for a DPL (or DCS - Digital Coded Squelch; DPL is Digital Private Line, which is a misnomer, since "Private Line" is Motorola's name for CTCSS) of 346. It probably won't make any difference whether you do or not - unless there's someone else nearby using the same frequency, in which case you'll hear only the hotel. The mode you want is plain old FM.

****
Yaesu FT-50RD Handheld

Has enhanced keypad and fairly good battery. No charger, paperwork, box or
other accessories.

This HT works, but is a real stress generator. The top rotary encoder (channel selector, menu advance, memory, advance, etc.) rotates normally, but will toggle between forward and backwards selections. You can eventually find the channel, selection, frequency that you want, but it may go backwards, forwards, not advance... Anything can happen. Other than that, it is a great talker. The battery takes and holds a charge and looks to be in good shape.

I am keeping the antenna and charger for another rig. It will come with radio and battery.

$100.00 OBO Plus shipping

****

Yaesu VX-5R

HT, Box, Packing, Charger, Manual, Standard antenna(s) and tip(s)

This HT has problems; the antenna is loose at the connector and it has no measurable output. Additionally, it was opened up to be sure that the correct screws were used on the belt clip (a common source of failed outputs), and the conector that holds the ribbon cable between halves is not retaining the cable properly. It showed signs of have been opened for inspection before. It was purchased used with low output, and was being used with a Yaesu Car DC Adapter (the correct one for this model) when it overheated and lost all measurable output. It will do great as an extremely near field test device; I use it for talking into a 6m repeater I have been setting up. I can get about 300' range from the repeater antenna, under the best conditions. It may be worth sending back to Yaesu for repair, or for parts to combine with another broken unit. It has the baro, altitude and temp sensors installed in it.

$75.00 Plus shipping

****

Kenwood Sirius Satellite Radio

Kenwood Tuner (KTC-SR901), Display unit with RF Modulator (KCA-RF701M) and Terk antenna (TRK-SR20S) - With all original packaging, documents, etc. - Removed from car when traded in. - Antenna will need a re-mount kit. - Bought New around 2003, and traded in car later for one that had Sirius already installed.

$45.00 OBO Plus shipping

****

$10.00 plus shipping

****

Curtis Electro Devices Model ESNR-5900

Analyzer, Antenna, Charger and Manual for a similar model. Used in Cellular sales to ID phone information prior to programming a used phone. Will read ESN ONLY after initiating sequence on phone in near field. Will not snarf pairs for illegal use. This is a basic, low-power cell-site. It emulates

Cell-Site operation within the AMPS service to initiate communications with a cellphone within a very short distance in order to extract info necessary to reprogram/reactivate that phone.

It will not read any phone information unless the phone is close by, and only after that phone has dialed an non-compatible number sequence, that will not result in an completed call.

This is not an illegal monitoring device; it was marketed as a sales-support tool for cellular dealers - Cira 2nd Quarter 1995.

This unit was assembled from end-run parts inventory when the line was discontinued, so the manual isn't the correct on for this model (but explains overall use) and the charger may not be the correct MAh rating for the batteries installed. It uses 10 AA NiCad batteries and willl need replacements. It will be shipped without batteries to save weight (the ones in it were starting to show signs of seepage).

This is in a case that is 9"H x 6"W x 2"D and weighing 2 pounds.
Original retail to cellular sales outlets was $1295.00

Make offer or trade via email if interested.

****
RSA Security Smart Card Reader - Part Number: 903396 Revision 1.0

This is a Bulk Packaged unit. No software, instructions or additional items included. Unit has self adhesive pads for semi-permanent installation, as well as fold down front leg and rear rubber "anti-skid" pad for placement on any flat surface. Cables include a Serial (DB-9 female) connector that goes to the unit and also has a second cable coming from the DB-9 that goes to both Male and Female PS-2 type Keyboard connectors (6 pin mini-din) for feed-through connection to keyboard cable.

I believe the setup is to allow data through the Serial connection and to pick up power for the card reader circuit through the Keyboard connection.

The bottom label shows power demands of 5 VDC at 100 mA.

Inside the unit, the top of the board is marked:
SCR111 104080
Rev 1.0 JAN 00
SCM Microsystems

Above the "Card Cage " is silkscreened: S-CARD

The actual "card cage" has the markings JAE and T269

Removing the top of the card cage shows 8 contacts in 2 rows of 4, as well as a single contact separate from the
8 (possibly a CE pin??)

The bottom of the board inside has
PIC 1626C622A-20/SO (U3)
14 pin SM DIP 2C16 / HC74 (U2)

16 pin SM DIP ADM2052EARN / 0221 / K21517 (U1)
14.28 (X1) Appears to be 14.28 MHz timebase crystal

There is a 8 pin header marked J3 that is attached to both top and bottom boards (4 pins on each) as well as solder points (W1 - labeled 1 through 5) for additional connections. Thease appear to be plated through holes connecting both the top and bottom of the PCB. These lines appear to go from PIC to card cage and power source.

I don't know enough about this to determine if it is can be easily set up as a programmer also.

I have a bunch of these, bulk packaged in anti-static bubble wrap. New, never used.

$6.00 each plus shipping

****

AIM Products Model 15-5010 Push Button Coaxial Switch.

Use for selecting 2 sources for one Television, VCR, etc. - "F" Connectors for inputs and outputs on rear
A and B Switches on front - Can be mounted with supplied screws or supplied double-sided tape. - Units for bid are in original sealed plastic bags. New Old Stock, never used.

Great for selecting 2 antennas to one receiver or feeding 2 receivers from one antenna. Plus, up can always use them to switch between cable and a VCR.

$2.50 each plus shiping (Have 6 available)

****

All items are U-Ship from 31523 - Brunswick, GA.

I charge actual shipping cost, and will ship via USPS Priority on lighter items or FedEx Ground/Home Delivery on heavier ones. I will combine shipping on multiple items. I want to get rid of this stuff far more than I want to make a buck or 2 on shipping.

I will accept trade offers on Ham gear, Receiving gear, other electronic items.

I am looking for an Icom IC-T90A HT, Midland Syntech I Low-Band LMR Rigs (70-052, 050, 056 C models), Midland Syntech II accessories, Midland LMR Microphones......

Contact me off the NG @ kd4nue@gmail.com or dalite01@gmail.com or address in the header (if shown)

558. does a scanner like that exist (and if yes - where)

Newsgroup: rec.radio.scanner
Date: 2006-02-13 04:32:31 UTC
From: tnozh@yahoo.com
Message-ID: <1139805151.447123.236000@g47g2000cwa.googlegroups.com>
Source record: 10138

Hi everybody,

I have possibly a very naive question.

I enjoy my SONY ICF-SW7600G shortwave "world" radio which covers from 150kHz-29.999kHz in AM and 76MHz-108MHz in FM. My Radio Shack PRO-97 scanner covers some but, alas, *not* all of the frequencies from 25MHz-1300MHz.

Can I get a handheld scanner which would cover *all* of 150kHz-1300MHz in AM and FM or, better, even a wider spectrum (again - with nothing missing)? That would, in effect combine my ICF-SW7600G with an (improved) PRO-97 into one unit.

I realize that this would include TV stations, and God knows what else. But I don't like the idea of not having access to all the spectrum and I would prefer only 1 receiver (even if that means plenty of antennas depending on what I want to tune in).

Trunking, 1000+ channels and 10+ banks would also be a plus.

A built-in spectum analyzer would be really, really, really cool too!

Any reccomendations?

Thanks,

TN

559. Mode Question Re 39.560 and 123.0 MHz ?

Newsgroup: rec.radio.scanner
Date: 2006-02-13 13:19:24 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <df6dnSak96bGGm3enZ2dnUVZ_tudnZ2d@comcast.com>
Source record: 10139

Hello:

new at his.

Found the following freq's that apparently my town utilizes.

Are the modes fm for Both, or... ?

39.560 MHz
123.000

The 123.0 one is particularly perplexing for me, as I thought that puts it in the middle of the AM band,
which I always thought would be just for aero. Would a Town service use AM rather than fm ? Why, if so ?

Thanks,
B.

Normally 39.560MHz would be FM mode, and 123.000MHz would be AM mode. What are you hearing on 123.000MHz?

Bill Crocker

If they're using it for anything but aeronautical use (or
aeronautical-related - airport maintenance, fire, etc.), they're doing
so illegally.

123.0 suggests that it is somewhat airport/aviation related and should be
AM. If You can`t get a clear signal, it also could be something else, like
a tv or radio station ... over here at EDS I sometimes hear a radio
transmission that gets over the tower freq (depending on the weather and
where I am located).

Talk to You later ... Hans from Germany

The mode for 39.560 is narrow FM, or on most scanners, just FM.

The mode for 123 is almost certainly AM, in the Aircraft band. A lot of comms on the Air band are very hard to understand. Between the weird jargon, and the people eating the mike when they talk, and the limited bandwidth, sometimes it's a guess as to what they are saying.

You should be able to find a freq list for your area, and it will tall you what it is exactly. Check at Radio Shack, for a freq list, or just do search for whaevertown scanner freqs or whatevercounty scanner freqs, and you should find a lot.

Also, lots of good info at..

Are you sure the 123.0 is a frequency? If it is then it is probably
related to an airport in the area.

There is another possibility however" 123.0 is a valid PL tone, if the
listing you found the 39.56 freq from relates the two that might be the
case.

Often freqs with PL tones are listed as "39.560 (123.0)" or some similar
format.

PL is a form of sub-audible signaling used to reduce interference and
control access to radio systems. Several models of scanners utilize PL
features for the same purposes. It may also be referred to by other
trade names as well as CTCSS.

There's a difference between a wide-band radio that can "scan" a few
channels and a scanner. Without considerable help, neither the AOR nor
the Icom can "scan" a trunked system - one of the things the OP asked
for.

The JAV-232 as listed on our web site was only ever available through
us.

As it stands at the moment I do still have some blank PCB's ready to
populate however some of the original components used are no longer
available. Alternatives are listed by the likes of Farnells but I have
yet to check/confirm that they are of the same dimensions and/or will
work in the same design.

What radio was it primarily to be used with ?

I just received a PRO-97 and have been trying to get it to work. I understand trunking programming is something to be learned but I have not had any luck picking up the weather channels. Sometimes the unit will scan the weather channels but I don't receive any sound, just background noise. I have adjusted the squelch to just below threshold with no luck. Occasionally when I first turn the unit on I can pick up on of the stations but if I scan I can never get it back again. I am comparing this unit with an old PRO-26 that is receiving loud and clear. I have loaded the preprogrammed frequencies and tried to scan, no luck. While the Pro-26 is receiving signals on the same bands. I have tried initializing the scanner. Is there something that I am missing or do I have a bad unit ?

> Shack Pro-2035 Receiver isn't a scanner? It says on the front of it,
> "receiver" and it scans!!!

Mr. Klein is perhaps being a wee bit pedantic, but the (good) point he's making is that generally, a device advertised and sold as a scanner does a lot better job scanning (more speed, mainly) than a device sold as a communications receiver. I love my PRO-95 and my IC-R2 and use each daily, but they're not at all interchangeable. Yes, the IC-R2 can scan, but it's really pokey compared to the PRO-95. Moreover, I'm not aware of any communications receiver that can properly monitor a trunked system--another feature of many radios sold as scanners.

I'm a bit intrigued by that wideband trunking Uniden scanner (330?), but not intrigued enough to give up my current setup just yet. I've decided I'm pleased until after whatever rebanding effects settle into my area, after which I'll seek new hardware. Even though there are several units for sale right now that can be flash-upgraded, I'd rather just buy something that works out of the box, particularly when I'm not at all dissatisfied with what I have now.

Finally, to the OP's original point: you're not going to find good performance in one unit for everything you want to do. Too many compromises to be made, mainly in the name of form factor. I am pleased with the above for scanning and my Grundig YB400PE for shortwave. While the YB400PE is a fairly well-regarded piece, there are others for sale that are pretty much universally praised, like the Sony ICF-7600GR. The YB400PE pleases me, but I would consider myself a "serious casual" SW listener and not a hardcore DXer or anything.

But, I digress. Bottom line is you need multiple radios for a solid good experience for everything you want to listen to.

Anybody compared the performance of these two? Especially interested in how they compare in the VHF and UHF airbands. I know the 780XLT has more features, but I'm really interested in sensitivity, dynamic range, selectivity, and intermod rejection.

Frank

That it's a receiver doesn't make it not as scanner eitgher.

What's your native language? Maybe I can translate my original
statement into it so that you'll understand what I said. Your
question shows that either you don't, or you're trying to act smart.

Just keep your finger on one of the "channel" buttons (up or down) on
the remote, and lift it as soon as you see a picture. Your TV set
just scanned the channels. Yup. :)

Here is the response I got From the HEAD person of The GENESEE COUNTY
911 Headquarters .. He even includes his e-mail address

Mr. Turner from Michigan Frequency Coordination referred you to me as he
seems to be unable to satisfy you with his detailed and accurate response.
Yes, we do have a new 800 MHz system in Genesee County and we are
being listened to successfully by hundreds of citizens and all news
groups. We have nothing to "hide" as you insinuate but you need better
equipment which can be purchased at Radio Shack and several other
outlets. If you are really an active Amateur Radio Operator you should
have friends able to tell you this. I have also included a website that
might help you.

http://www.geocities.com/tomcat4680/

Have a good day,
Lloyd Fayling
Director
Genesee County 911

lrf@geneseecounty911.org

I take it that NO one but I was having problems with the Genesee county
system ! and The Radio Shack pro2096..
By the way, I donnot have a 2096 anymore, I turned it in for a REFUND..
it took Lloyd 3 weeks to respond.. I got my Radio Shack Refund from
Texas 2 WEEKS ago!

thanks for your response.
My scanner is an AR8200 MkII. I got myself a standard CC8200 (for the meantime) and modified it, changing the serial connector end
into a breakout box with an audio jack but unfortunately there's no squelch/mute on the audio, and I would like a cable that can
give me this.

591. Why Noise When No Broadcast Happening, etc. ?

Newsgroup: rec.radio.scanner
Date: 2006-02-15 12:46:56 UTC

Message-ID: <-4ednVSnoIYgv27enZ2dnUVZ_sadnZ2d@comcast.com>
Source record: 10070

Hello:

Was wondering about this:

When I tune to most any frequency with my scanner, the noise level is
really, really high when there is no
broadcast going on at that moment on that frequency.

When one does come on, it's as clear as a bell. This is true for the fm as
well as
the AM channels.

Of course, the Squelch control pretty much takes care of the problem, but
was wondering if
this is "typical" ?

What is the source of the noise, possibly:

the radio itself ?
atmospherics ?

Or,... ?

Thanks,
Bob

Alinco DJ-X200 has more features than you can shake a stick at, including a
spectrum analyzer, bug sniffer, frequency counter and auto freq logging.
At this point in time, I think you'd be hard pressed to find a full featured
handheld like this that also has trunking abilities ... But that is likely
not too far in the furutre.

Well, yeah, that's what it is, partly from the radio (not a whole lot of
it in most cases, except the really cheap/bad designs) and
atmosphere/ionosphere conditions. Part of the noise from the radio
itself is due to it being so sensitive and widebanded.

Not only is it typical, it's a 100% certainty. They all do it, from a 50
buck cheapie to a $2000 dream machine.

That's why they all have a squelch knob on them.

BDK

AOR 1000XLT Wide Range Monitor Receiver - Sale Pending

Handheld Unit
500 MHZ through 1300 MHZ (continuous coverage)
AM / FM / FMW (WideBand)
1000 Channels - 10 banks

$100.00 OBO Plus shipping

****
Yaesu FT-50RD Handheld

Has enhanced keypad and fairly good battery. No charger, paperwork, box or other accessories.

This HT works, but is a real stress generator. The top rotary encoder (channel selector, menu advance, memory, advance, etc.) rotates normally, but will toggle between forward and backwards selections. You can eventually find the channel, selection, frequency that you want, but it may go backwards, forwards, not advance... Anything can happen. Other than that, it is a great talker. The battery takes and holds a charge and looks to be in good shape.

I am keeping the antenna and charger for another rig. It will come with radio and battery.

$100.00 OBO Plus shipping

****

Yaesu VX-5R

HT, Box, Packing, Charger, Manual, Standard antenna(s) and tip(s)

This HT has problems; the antenna is loose at the connector and it has no measurable output. Additionally, it was opened up to be sure that the correct screws were used on the belt clip (a common source of failed outputs), and the conector that holds the ribbon cable between halves is not retaining the cable properly. It showed signs of have been opened for inspection before. It was purchased used with low output, and was being used with a Yaesu Car DC Adapter (the correct one for this model) when it overheated and lost all measurable output. It will do great as an extremely near field test device; I use it for talking into a 6m repeater I have been setting up. I can get about 300' range from the repeater antenna, under the best conditions. It may be worth sending back to Yaesu for repair, or for parts to combine with another broken unit. It has the baro, altitude and temp sensors installed in it.

$75.00 Plus shipping

****

Kenwood Sirius Satellite Radio

Kenwood Tuner (KTC-SR901), Display unit with RF Modulator (KCA-RF701M) and Terk antenna (TRK-SR20S) - With all original packaging, documents, etc. - Removed from car when traded in. - Antenna will need a re-mount kit. - Bought New around 2003, and traded in car later for one that had Sirius already installed.

$45.00 OBO Plus shipping

****

Standard Horizon 6 Series Marine HT

No Battery
Comes with Antenna and Destop Charger

Has Crysytals for Channels 6 and 16
Fairly Clean

$10.00 plus shipping

****

Motorola Radius p50+ HT

Has DTMF Pad, Standard Charger - HTN9046B with Wall Wart
Currently on 151.685 MHz Simplex - No PL - Belt Clip mount is broken on rear.
Radio squeals when first turned on, but seems to operate normally after that.
Battery holds some charge, but will need replacing.

$35.00 Plus Shipping

****

Optoelectronics Scout 40 Sale Pending

- Needs repair -
Rapid charge not working properly, but charges on slow charge OK. Battery still holding good charge. Sensitivity is way down as a result of exposure to a stronger RF Field than the front end was designed for. Unit still comes on, display and switches all work, just very low sensitivity. (IF I Recall Correctly, a 1v signal above 450 MHz would register). Overall, in good condition. - These sold for $350.00 to $400.00 new -

$50.00 Plus shipping

****

Skutch T-51A / 3 - Line Swinger (Telecomm)

This is an intersting device that is used to route 3 lines to one device (phone, answering machine, modem, etc). It will automatically pick up the first line that rings and send a busy signal to the remaining two. Useful in a small business during lunch hours or similar situations. Very unique. In As-New condition.

$10.00 plus shipping

****

Curtis Electro Devices Model ESNR-5900

Analyzer, Antenna, Charger and Manual for a similar model. Used in Cellular sales to ID phone information prior to programming a used phone. Will read ESN ONLY after initiating sequence on phone in near field. Will not snarf pairs for illegal use. This is a basic, low-power cell-site. It emulates Cell-Site operation within the AMPS service to initiate communications with a cellphone within a very short distance in order to extract info necessary to reprogram/reactivate that phone.

It will not read any phone information unless the phone is close by, and only after that phone has dialed an non-compatible number sequence, that will not result in an completed call.

This is not an illegal monitoring device; it was marketed as a sales-support tool for cellular dealers - Cira 2nd Quarter 1995.

This unit was assembled from end-run parts inventory when the line was discontinued, so the manual isn't the correct on for this model (but explains overall use) and the charger may not be the correct MAh rating for the batteries installed. It uses 10 AA NiCad batteries and willl need replacements. It will be shipped without batteries to save weight (the ones in it were starting to show signs of seepage).

This is in a case that is 9"H x 6"W x 2"D and weighing 2 pounds.
Original retail to cellular sales outlets was $1295.00

Make offer or trade via email if interested.

****
RSA Security Smart Card Reader - Part Number: 903396 Revision 1.0

This is a Bulk Packaged unit. No software, instructions or additional items included. Unit has self adhesive pads for semi-permanent installation, as well as fold down front leg and rear rubber "anti-skid" pad for placement on any flat surface. Cables include a Serial (DB-9 female) connector that goes to the unit and also has a second cable coming from the DB-9 that goes to both Male and Female PS-2 type Keyboard connectors (6 pin mini-din) for feed-through connection to keyboard cable.

I believe the setup is to allow data through the Serial connection and to pick up power for the card reader circuit through the Keyboard connection.

The bottom label shows power demands of 5 VDC at 100 mA.

Inside the unit, the top of the board is marked:
SCR111 104080
Rev 1.0 JAN 00
SCM Microsystems

Above the "Card Cage " is silkscreened: S-CARD

The actual "card cage" has the markings JAE and T269

Removing the top of the card cage shows 8 contacts in 2 rows of 4, as well as a single contact separate from the
8 (possibly a CE pin??)

The bottom of the board inside has
PIC 1626C622A-20/SO (U3)
14 pin SM DIP 2C16 / HC74 (U2)
16 pin SM DIP ADM2052EARN / 0221 / K21517 (U1)
14.28 (X1) Appears to be 14.28 MHz timebase crystal

There is a 8 pin header marked J3 that is attached to both top and bottom boards (4 pins on each) as well as solder points (W1 - labeled 1 through 5)

for additional connections. Thease appear to be plated through holes connecting both the top and bottom of the PCB. These lines appear to go from PIC to card cage and power source.

I don't know enough about this to determine if it is can be easily set up as a programmer also.

I have a bunch of these, bulk packaged in anti-static bubble wrap. New, never used.

$6.00 each plus shipping

****

AIM Products Model 15-5010 Push Button Coaxial Switch.

Use for selecting 2 sources for one Television, VCR, etc. - "F" Connectors for inputs and outputs on rear
A and B Switches on front - Can be mounted with supplied screws or supplied double-sided tape. - Units for bid are in original sealed plastic bags. New Old Stock, never used.

Great for selecting 2 antennas to one receiver or feeding 2 receivers from one antenna. Plus, up can always use them to switch between cable and a VCR.

$2.50 each plus shiping (Have 6 available)

****

All items are U-Ship from 31523 - Brunswick, GA.

I charge actual shipping cost, and will ship via USPS Priority on lighter items or FedEx Ground/Home Delivery on heavier ones. I will combine shipping on multiple items. I want to get rid of this stuff far more than I want to make a buck or 2 on shipping.

I will accept trade offers on Ham gear, Receiving gear, other electronic items.

I am looking for an Icom IC-T90A HT, Midland Syntech I Low-Band LMR Rigs (70-052, 050, 056 C models), Midland Syntech II accessories, Midland LMR Microphones......

Contact me off the NG @ kd4nue@gmail.com or dalite01@gmail.com or address in the header (if shown)

The radio while operating FM is acting as a very high gain amplifier. It is amplifing around one million or more times. Random electron movement in conductors are generating enough noise to be heard . This is normal. It is the property of FM to start quiting the noise as a RF signal is picked up. AM has much of the same noise but most receivers have an automatic gain control that cuts the gain of the amplifier somewhat. Lightning, some motors with brushes, and many other devices make much of the noise you hear on an AM receiver.

Dear Bill N8JOS (aka "No One"):
The APCO 25 digital system (which is what is being used in Michigan)
will not sound like (have the frequency fidelity nor amplitude smoothness)
of an FM system. (at least not when listened to on the available lower cost
radios.) The digital system is, well, digital and is quantized at a
none-too-fast rate.

In short, the "new" system does not sound like the systems of old.
Fortunately, humans are able, if they are willing, to understand less than
faithful reproductions of the human voice. My students once produced a two
bit quantization of human speech. It was not clear, but it was
understandable. In the early days of the use of SSB, some people had
difficulty in understanding the signals. I have long observed that some
people are much better at accommodating to less than perfect reproductions
than other people.

I speculate that you may be one of the few for whom signals must be
clear in order to be satisfactory. In time, lower cost receivers will
become better. Stay tuned.

I am Not Talking about The AUDIO SOUND..(fidelity)

I am refering to the FACT that EVERY other Word is Heard on the System.

It doesnot make sense to have a system where if a SENTENCE spoken is 20
words long and all the system rebroadcast is 12 of those words .

The TRANSMISSIONS donnot Make any Sense .
Example.

I am Chasing a Blue Pontiac on I-75

The words Heard on the Pro2096 would be

am a pontiac 75

I never hear the words I / Chasing / a/ Blue / on/ 1-

It Was chopping off WORDS

I tried win96

I had the Scanner for over a Month.

Radio Shack Repair in Buffalo,Ny Had the 2096 for a week on that time .
Thats where the TECH said He was when he Called me and SAID, THAT THE
PRO2096 ISNOT compatible with SIMULCAST APCO 25 System in Genesee county

Needless to say.. I DONNOT have That Scanner anymore . Radio Shack sent
me My $450.00 Back
.

602. AOR Airband filter?

Newsgroup: rec.radio.scanner
Date: 2006-02-16 06:43:36 UTC
From: Adam Butler <adambutler100@hotmail.com>
Message-ID: <IvadnevdyMiEgmneRVn-pQ@giganews.com>
Source record: 10082

Does the AOR airband filter really help?
I know it is a passband type filter but wondering if anyone has actually
tested it and the results.

Thanks!

thanks but this page seems to be only for Radio Shack scanners and mine is an AOR scanner with the special Options socket.

If it scans, doesn't that make it a scanner?

I do believe one of those companies just came out with a wide band receiver that actually *does* scan trunked systems - without considerable help. Does that still not meet your criteria for a scanner? Is the name "Icom" or "AOR" that you don't like?

- Matt

606. Re: Best portable antenna for airbands?

Source record: 10086

Your right, I had the AH-510 and other hamster antennas on my mind which
do work nice on commercial bands but some people mistakenly recommend
for air band.
The AL-500 is a great air and mil-air antenna.
Bob

From: nadaclue <0nadaclue@earthlink.net>
Message-ID: <pan.2006.02.16.16.09.52.496296@earthlink.net>
Source record: 10087

I have been trying to get SLURP run on my Windows XP box to capture the data being sent to the serial port on another Windows XP box. The program starts with no problem, but I have been unable to get it to accept a change in baud rate from the default 4800 to 9600. A file with the default name "dumpcom" is created on start-up. This is what I have been trying "A:\> slurp /1/b9600/d8/p0/s2/w0200/last0". What am I doing wrong?

Thanks for any information.

RS-232 is RS-232, TTL is TTL. Wiring a plug adapter is the easy part.

with an AOR control lead (CC8200) there is a small circuit board tucked inside the serial
port plug housing, it's not a case of
just wiring a plug adaptor although I wish it was. I expect the jav-232 cable (if it ever
exists again) would contain even more
circuitry. Soldering sections togther is easy. Getting hold of the sections - that's the
hard part.

I just acquired this scanner and love it, tho I am considering purchasing the 396 due to the fact that I travel nationwide and run into too many digital situations in larger cities, but my question will pertain to both scanners.

What would be the quickest way to download a system to the radio when I arrive in a particular city? Is there a frequency CD or program out there that is compatible with the scanner that will let me quickly download the one system I need and assign it a quick key within say 5 minutes after I get to a certain locale? Any suggestions greatly appreciated. I am a 48-state trucker and need a quick programmer. As it is, I sit and search for systems and punch them in manually - pain in the arse. By the time I get them configured, it's time to leave:)

Thanks!

J

Same with all other RS-232 to TTL converters.

>just wiring a plug adaptor although I wish it was. I expect the jav-232 cable (if it ever exists again) would contain even more
>circuitry. Soldering sections togther is easy. Getting hold of the sections - that's the hard part.

The cables on Don's site make it easy - they do the level conversion.
All you have to do is the connector conversion. I haven't seen a
schematic of the jav-232, but I'd be veru surprised if it was anything
more than a bidirectional level converter.

Go to <http://www.radioreference.com/modules.php?name=RR> and get all
the systems you think you'll need. You can use the free Uniden UASD
software that you can download at their site to save the systems to
both the scanner and a laptop, from which you can upload any system to
the scanner in a few minutes.

Even if you program the system by hand, you can save it to disk, so
the next time you're there you just upload it to the scanner.

BTW, CDs and books are outdated almost before you get them. The RR
site is kept up to date by the users. (It would be nice if you
contributed something to it if you find it useful. I have nothing to
do with the site other than being a user, but I think it's a site
worth supporting.)

OK, from what I have researched - I will have to pay 30 buckaroos to unlock the full version of the Uniden software in order to use it to dl from the RR database. No problem with donating to the RadioReference website, it is well worth it, in my opinion - so, what would you suggest...unlock the Uniden sw or purchase the 3arc330? I'm leaning more toward the arc330, but I'm not crazy about the interface and graphics. Any comments on using the RR website with either program to dl and program freqs?

>The cables on Don's site make it easy - they do the level conversion. >All you have to do is the connector conversion. I haven't seen a >schematic of the jav-232, but I'd be veru surprised if it was anything >more than a bidirectional level converter.

The JAV-232 "at its core" is, as you suggest a biredectional level convertor using a MAX IC.

Rather than have a "model specific" cable/connector (for example the AOR 8200PC) we put a standard DIN plug on the top that can be used to make up any number of cables to connect to any model requiring TTL. The JAV-232 manual gives details of the connections needed for what radio and only basic soldering skills are needed to make up cables as and when needed.

You could have a number of models that require a TTL interface and make use of just the one interface.

When it comes to the AOR models originally designed for the AR8000 hence the FFC connector and cable, we also included in the JAV-323 a squelch tape recorder relay, audio output and with the AR8200 a discriminator output. With the one connection to the AR8200 for example you have RS232/TTL data (with squelch detect too), tape recorder relay and audio output together with discriminator feed.

I'm seeking information and opinions about the Miracle Ducker IL. I was considering using it with my Icom IC-R20 receiver for portable operation. It appears to be a tunable loading coil used in conjunction with a rubber duck or whip. The manufacturer's information is not very detailed, but the reviews for this product seem decent. I'd be interested in hearing from others who own or have considered buying one.

Thanks,
Doug

I use the Uniden software, only because I don't like Gommert's
attitude. I'm a shareware/freeware author and he disparages free
software. YMMV.

The Uniden programs don't directly download from the site, but KB8SOE
has a site that can generate a file from a copy/paste of the site.
I've used it a few times. <www.kb8soe.com/396/uasd.php>

Yaesu FT-50RD Handheld

Has enhanced keypad and fairly good battery. No charger, paperwork, box or other accessories.

This HT works, but is a real stress generator. The top rotary encoder (channel selector, menu advance, memory, advance, etc.) rotates normally, but will toggle between forward and backwards selections. You can eventually find the channel, selection, frequency that you want, but it may go backwards, forwards, not advance... Anything can happen. Other than that, it is a great talker. The battery takes and holds a charge and looks to be in good shape.

I am keeping the antenna and charger for another rig. It will come with radio and battery.

$100.00 OBO Plus shipping

****

Yaesu VX-5R

HT, Box, Packing, Charger, Manual, Standard antenna(s) and tip(s)

This HT has problems; the antenna is loose at the connector and it has no measurable output. Additionally, it was opened up to be sure that the correct screws were used on the belt clip (a common source of failed outputs), and the conector that holds the ribbon cable between halves is not
retaining the cable properly. It showed signs of have been opened for inspection before. It was purchased used with low output, and was being used with a Yaesu Car DC Adapter (the correct one for this model) when it overheated and lost all measurable output. It will do great as an extremely near field test device; I use it for talking into a 6m repeater I have been setting up. I can get about 300' range from the repeater antenna,
under the best conditions. It may be worth sending back to Yaesu for repair, or for parts to combine with another broken unit. It has the baro, altitude and temp sensors installed in it.

$75.00 Plus shipping

****

Kenwood Sirius Satellite Radio

Kenwood Tuner (KTC-SR901), Display unit with RF Modulator (KCA-RF701M) and Terk antenna (TRK-SR20S) - With all original packaging, documents, etc. - Removed from car when traded in. - Antenna will need a re-mount kit. - Bought New around 2003, and traded in car later for one that had Sirius already installed.

$45.00 OBO Plus shipping

Has DTMF Pad, Standard Charger - HTN9046B with Wall Wart
Currently on 151.685 MHz Simplex - No PL - Belt Clip mount is broken on rear.
Radio squeals when first turned on, but seems to operate normally after that.
Battery holds some charge, but will need replacing.

$35.00 Plus Shipping

****

Skutch T-51A / 3 - Line Swinger (Telecomm)

This is an intersting device that is used to route 3 lines to one device (phone, answering machine, modem, etc). It will automatically pick up the first line that rings and send a busy signal to the remaining two. Useful in a small business during lunch hours or similar situations. Very unique. In As-New condition.

$10.00 plus shipping

****

Curtis Electro Devices Model ESNR-5900

Analyzer, Antenna, Charger and Manual for a similar model. Used in Cellular
sales to ID phone information prior to programming a used phone. Will read
ESN ONLY after initiating sequence on phone in near field. Will not snarf pairs for illegal use. This is a basic, low-power cell-site. It emulates Cell-Site operation within the AMPS service to initiate communications with
a cellphone within a very short distance in order to extract info necessary
to reprogram/reactivate that phone.

It will not read any phone information unless the phone is close by, and only after that phone has dialed an non-compatible number sequence, that will not result in an completed call.

This is not an illegal monitoring device; it was marketed as a sales-support
tool for cellular dealers - Cira 2nd Quarter 1995.

This unit was assembled from end-run parts inventory when the line was discontinued, so the manual isn't the correct on for this model (but explains overall use) and the charger may not be the correct MAh rating for the batteries installed. It uses 10 AA NiCad batteries and willl need replacements. It will be shipped without batteries to save weight (the ones
in it were starting to show signs of seepage).

This is in a case that is 9"H x 6"W x 2"D and weighing 2 pounds.
Original retail to cellular sales outlets was $1295.00

Make offer or trade via email if interested.

****

RSA Security Smart Card Reader - Part Number: 903396 Revision 1.0

This is a Bulk Packaged unit. No software, instructions or additional items
included. Unit has self adhesive pads for semi-permanent installation, as well as fold down front leg and rear rubber "anti-skid" pad for placement on
any flat surface. Cables include a Serial (DB-9 female) connector that goes
to the unit and also has a second cable coming from the DB-9 that goes to both Male and Female PS-2 type Keyboard connectors (6 pin mini-din) for feed-through connection to keyboard cable.

I believe the setup is to allow data through the Serial connection and to pick up power for the card reader circuit through the Keyboard connection.

The bottom label shows power demands of 5 VDC at 100 mA.

Inside the unit, the top of the board is marked:
SCR111 104080
Rev 1.0 JAN 00
SCM Microsystems

Above the "Card Cage " is silkscreened: S-CARD

The actual "card cage" has the markings JAE and T269

Removing the top of the card cage shows 8 contacts in 2 rows of 4, as well as a single contact separate from the 8 (possibly a CE pin??)

The bottom of the board inside has
PIC 1626C622A-20/SO (U3)
14 pin SM DIP 2C16 / HC74 (U2)
16 pin SM DIP ADM2052EARN / 0221 / K21517 (U1)
14.28 (X1) Appears to be 14.28 MHz timebase crystal

There is a 8 pin header marked J3 that is attached to both top and bottom boards (4 pins on each) as well as solder points (W1 - labeled 1 through 5) for additional connections. Thease appear to be plated through holes connecting both the top and bottom of the PCB. These lines appear to go from PIC to card cage and power source.

I don't know enough about this to determine if it is can be easily set up as
a programmer also.

I have a bunch of these, bulk packaged in anti-static bubble wrap. New, never used.

$6.00 each plus shipping

****

AIM Products Model 15-5010 Push Button Coaxial Switch.

Use for selecting 2 sources for one Television, VCR, etc. - "F"
Connectors for inputs and outputs on rear
A and B Switches on front - Can be mounted with supplied screws or
supplied double-sided tape. - Units for bid are in original sealed
plastic
bags. New Old Stock, never used.

Great for selecting 2 antennas to one receiver or feeding 2 receivers from one antenna. Plus, up can always use them to switch between cable and a VCR.

$2.50 each plus shiping (Have 6 available)

****

All items are U-Ship from 31523 - Brunswick, GA.

I charge actual shipping cost, and will ship via USPS Priority on lighter items or FedEx Ground/Home Delivery on heavier ones. I will combine shipping on multiple items. I want to get rid of this stuff far more than I
want to make a buck or 2 on shipping.

I will accept trade offers on Ham gear, Receiving gear, other electronic items.

I am looking for an Icom IC-T90A HT, Midland Syntech I Low-Band LMR Rigs (70-052, 050, 056 C models), Midland Syntech II accessories, Midland LMR Microphones......

Contact me off the NG @ kd4nue@gmail.com or dalite01@gmail.com or address in the header (if shown)

631. RF receiver with remote control through TCP/IP

Newsgroup: rec.radio.scanner

Hi everybody,

Maby this isn't the good place to ask, but for my work and a project we're working on, I'm looking for RF receivers (say up to 60MHz) which can be remotely controlled through local network and TCP/IP. The goal being an operator to be able to tune the receivers from his workstation which can be located somewhere else in the building.

If anybody knows of such products, I'd be happy to get some pointers, links, informations, etc...

Thanks in advance.

Eric

You might also want to look at Ham Radio Deluxe which supports the R8500.

Take your pick :) there are anumber of the mout there e.g. Ham Radio
Deluxe has a remote server function that would allow this type of
operation. ALl you need is a computer with WinXP on it a supported radio
of your choice and a little config work.

Thank you for the note. I already use HRD. It is a straight and
strong programme !

I use RS-R8500 for storing the frequencies into the memories of the R8500.
So I can also use my preferential frequencies on the R8500 when the PC does
not run. (I am probably too lazy to type the frequencies again and again)
;-) I am used to it with my old NRD 525.

Depends on what you need in a receiver. SSB? Ppm stability? Variable
bandwidth? Or would a scanner that covers the frequency and receives
AM and FM be enough?

But any receiver that can be controlled with software can be
controlled over your LAN - just install UltraVNC
<http://ultravnc.sourceforge.net/> on the computer the receiver is
connected to, and the UltraVNC client on the computer you want to use
for control and you can control it with the software you normally use
for controlling that receiver locally. (You'll have to use something
else - I use Winamp with the Oddcast plugin and Icecast - to remote
the audio.)

Hi Al,

Actually, scanners that covers AM and FM would be enough. No need of too sophisticated devices for our experimentations.

When I saw that most receivers (if not all) allow interconnect through a serial port only, I though about the vnc solution. However, as we plan a cluster of receivers, I'd have prefered to find receivers with an on board network port...

We don't need audio since it'll follow another path in our system. It's just for controlling the receivers.

In the mean time, I stumbled across the WinRadio receiver PC boards, what could be the solution. We could put several boards into a clean rack mounted computer, and WinRadio to provide the remote server software. Moreover, I've found some sourceforge projects which provides drivers and libraries (among

other), this would allow the host computer to run on unix, thus much customization...

Many thanks for your input, Eric

Thanks Panzer,
Wow, this HRD stuff really looks neat!

I think this would be a nice solution if we turn our choice to "external" receivers. Though, I'm now thinking about the WinRadio PC boards solution (see my follow-up to Al). A 19" computer full of WinRadio boards could be well integrated to our system...

Now I need to check if the mini-jack on the rear of WinRadio boards really is for audio output since we need independant analog output for each receiver (e.g. not from the computer's sound board)

best regards, Eric

The facts:

- we did offer you a discount
- after your first email I visited both scancat/scancontrol websites to check their current offering for the Uniden BR330T and make a competitive offer, but both companies do not list the popular BR330T in their list of supported equipment!
- I asked you to send me the websites showing they do support the BR330T but I am still waiting for that information, I even downloaded their latest demo's and doc's, none of them mention BR330T

K1MAN BULLETIN - B060215B -

K5LBJ (ARRL BIG PROJECT STATION) GOES "BIG TIME" WITH K1MAN

Dateline Belgrade Lakes, Maine, USA.

K1MAN came on 14.275 MHz. after KE9RY signed with OE8ANK at 8:30 EST on Wednesday, 15 February 2006.

OE8ANK and K5LBJ were calling CQ (they apparently could not hear each other), and K1MAN answered and made contact with both stations at the same time in hopes that a three way QSO could be established. Ray, OE8ANK, said that he was in Southern Austria, and Harry, a K5LBJ High School student, said that he was in Austin, Texas. K5LBJ (in "K1MAN shock?") suddenly "froze up cold" and totally dropped out of the QSO, not responding to several calls. K1MAN then finished up with OE8ANK and called K5LBJ back again and again. N6GJR, Carl, then called in from the Dallas area for a short QSO. K1MAN signed with him and then started the IARN daily talk show since the frequency was now totally clear. Five minutes into the K1MAN talk show, Harry, K5LBJ, called K1MAN on the telephone, not to join the talk show, but to respectfully "complain" about K1MAN "taking over" "his" frequency(1). But, being delighted to have kids(2) on "my" 14.275 MHz. frequency (hi), and in the true spirit of good amateur practice, I immediately stopped the talk show in progress and turned the frequency back over to K5LBJ who then called CQ, CQ, CQ, CQ, CQ, repeatedly.

K1MAN then checked in again and tried to get a signal report and info on K5LBJ and the "ARRL School Club Roundup" which they were working. But, the kids had no interest in such "rag chewing;" they just wanted contacts, Harry said. No problem. Harry did say that they would be on for an hour. No problem. At 9:08 EST, fifteen or so minutes later, Harry said K5LBJ was going QRT. Not an hour by any stretch, but these are just kids, right? No digital clocks in the ARRL premier Big Project ham shack???? ARRL petty hobby politics???? Perhaps the kids actually believe the prevailing ARRL "party line" that K1MAN is not a duly licensed amateur radio station????

I gather K5LBJ went QRT so the kids could attend classes and study such American fundamentals of citizenship such as the United States Constitution which guarantees equal justice for all, except for K1MAN, and due process of law for everyone, except for K1MAN, hi! Perhaps some "bible study: In the beginning there was ARRL, and the Lord saw

that the League was good in the Garden of Newington, etc.!"

I am truly flattered that the premier ARRL Big Project student station(3) would come to 14.275 MHz. right after the new K1MAN talk show was announced to the world. Actually, 14.275 MHz. is a very popular special event frequency, isn't it? They say that imitation is the sincerest form of flattery. If you can't bring Mohammed to the mountain, bring the mountain to Mohammed, hi! K5LBJ thus went big time with K1MAN on 14.275 MHz., in the major leagues of amateur radio.

73 and GL de K1MAN

(1) First the Boy Scouts and now the kids, right? I can see another $21,000 NAL from "Rot Riley" now, can't you? Hi!

(2) Honestly, when was the last time you worked someone under age 30 on 20 meters? In fifty years of amateur radio, I could count it on one hand with the exception of when I was 20 and talking to myself, hi!

(3) Check out K5LBJ on www.QRZ.com.

655. some help needed with Miami Police frequencies

Newsgroup: rec.radio.scanner
Date: 2006-02-20 16:48:11 UTC
From: vineyard_saker@yahoo.com
Message-ID: <1140454091.252006.207850@g44g2000cwa.googlegroups.com>
Source record: 10035

Hi everybody,

I am still working on preparing my trip to Miami next month, and I came acros this page http://www.bellscb.com/cb_radio_hobby/scanners/miami_fleet_codes.htm with info about the frequencies used by the police in Miami. I am a little confused here. The website lists two frequencies groups:

TYPE I:

854.9625 855.2125 855.4625 855.7125
856.2125
856.4625 856.7125 856.9625 857.4625
857.7125
857.8625 857.9625 858.2125 858.7125
858.9625
859.2125 859.4625 859.9625 860.2125
860.4625
860.7125

and

TYPE II:

856.7875 856.9125 857.7875 857.9125
858.7875
858.9125 859.7875 859.9125 860.7875
860.9125

Since they are in the 800MHz range, I suppose that these are trunkated frequencies, but what are TYPE I and TYPE II? My PRO-97 comes with the following modes: CTCSS/CT, DCS/DC, Motorola/MO (pre-rebanding), EDACS, LTR.

I am under the impression that TYPE I and TYPE II are probably Motorola, but then how can I find out with these are pre or post -rebanding (I think that my PRO-97 will not be able to scan rebanded Motorola frequencies, alas).

Could I listen to TYPE I AND TYPE II at the same time? If yes, in which order should I enter these frequencies in my bank? Do I also need to enter the fleet IDs or does this receiver do that automatically? (the IDs are also given on the web page above).

Many thanks in advance for your help,

VS

PS: for those who helped me with the Miami Sheraton frequencies question:

I just came back from a chess championship in Orlando which took place at the Traveloge in Kissimmee (South of Orlando). I used my PRO-97 Signal Stalker to scan for the hotel's frequencies. In less than 5 min I had them all. The hotel's main frequency was 150.90500, but it also used the following four 462.32500, 462.57500, 464.03750 and 469.03750. In two days of scanning I did not identify any specific service using any one rather than the other. Their main frequency, 150.90500, was used for pretty much everything from calling in a repair to ordering more towels. I did not identify any security frequency, but then neither did I see any dedicated security personnel.

As promised, when I come back from Miami, I will post a short report about the Sheraton there.

Hi again,

Now I am even more confused. I look up the autoritative radio
reference and I found out that according to
http://www.radioreference.com/modules.php?name=TRSDB&sid=208 Miami
Police does not use TYPE I or TYPE II Motorola, but *EDACS*?!?!

Which website should I trust?!

Radioreference says that:

"Dade County actually has 3 separate systems in use for countywide
communications -->

1. A 6 site 20 channel simulcast EDACS system for all public safety
operations.

2. A 6 site 20 channel simulcast EDACS system for all county services.

3. A single site 5 channel EDACS system for the Miccusukee Indian
Police, remote operations and aircraft operations.
This site is located at the Miccusukee Indian Reservation about 25
miles west in the Everglades.

4. A single site 5 channel EDACS system mounted on a remote trailer for
special operations and special events.

All Dade County public safety operations except the fire department
uses these systems.
A couple of Police Talkgroups are in AEGIS Digital mode or Encrypted.

System Frequencies
Site Description
001 LG and Fire 01 866.11250 02 866.36250 03 866.61250 04 866.86250
05 867.13750 06 867.38750 07 867.66250
08 867.91250 09 868.26250 10 868.51250 11 866.13750 12
866.38750 13 866.63750 14 866.88750
15 867.28750 16 867.53750 17 868.11250 18 868.36250 19
868.61250 20 868.86250
002 Public Safety 01 866.03750 02 866.28750 03 866.76250 04
867.06250 05 867.41250 06 867.78750 07 868.13750
08 868.38750 09 868.63750 10 868.88750 11 866.06250 12
866.31250 13 866.56250 14 866.81250
15 867.11250 16 867.36250 17 867.56250 18 867.81250 19
868.16250 20 868.41250
003 Remote Everglades 01 866.73750 02 867.23750 03 867.68750 04

868.23750 05 868.73750
005 Remote Trailer 01 866.13750 02 866.38750 03 866.63750 04
866.06250 05 866.31250

Does this mean that I should enter only the "public safety" frequencies
to hear the police? Since I am not from the USA am not sure if police
and "public safety" are the same thing or not. If not, which
frequencies do the cops (Miami Police & Sheriff) use?

Again - many thanks for any pointers!

The ARRL is now a political organization.
K1MAN is trying to become the new political organization.

If anyone wants to help further the cause of ARS, they should
join a local club or just make a donation to a local club or
the Foundation for Amateur Radio.

Your money is better spent close to home, rather then lining someone's pockets!

Ok lets cut the bully shit, First off K1MAN is LEGAL! until the FCC makes a FINAL ORDER on his his fined he can legally be on the air. The Fucking Asshole Radio Relay League and their little members are pushing this shit that he's operating illegally, which is not true. As for K5LBJ, they need to learn that they don't own any frequencies, and if the frequency is not being used then anyone can use it. This bull shit idea of well were sitting on the frequency, and although were not on it, were still using it, and that's what the vast majority of amateur operators are doing and this bullshit practice needs to stop.

Because it's a fact, anyone who reads the FCC rules and regulations
will tell you that. I messed around enough with the FCC enough to know
both in Amateur radio and in regards to pirate radio. Untill a FINAL
ORDER is issued he can legal use his station. K3VR will tell you that
and so will Keith Lamonica W7DXX who is a lawyer.

This is the Dade County system. The City of Miami uses
http://www.radioreference.com/modules.php?name=TRSDB&sid=206. Since
the city is located within the county, it might seem confusing.

Miami city police are on the Motorola system. Dade County police are
on the EDACS system. I doubt that makes it any more clear to you.

Program both systems - you'll hear some action on one and some action
on the other.

>little confused here. The website lists two frequencies groups:
>
>TYPE I:

This has been upgraded to a Motorola Type II system - it's the Miami
City system. The control frequencies (the only ones you have to
program) are:

854.9625, 855.2125, 855.4625 and 855.7125.
<http://www.radioreference.com/modules.php?name=TRSDB&sid=206>

>TYPE II:

This is the Miami Beach system. The control frequencies are:

859.78750, 859.91250, 860.78750 and 860.91250.
<http://www.radioreference.com/modules.php?name=TRSDB&sid=207>

>Since they are in the 800MHz range, I suppose that these are trunkated
>frequencies, but what are TYPE I and TYPE II? My PRO-97 comes with the
>following modes: CTCSS/CT, DCS/DC, Motorola/MO (pre-rebanding), EDACS,
>LTR.

>I am under the impression that TYPE I and TYPE II are probably
>Motorola, but then how can I find out with these are pre or post
>-rebanding

Everything at this time (with the exception of a few systems that have
moved - these haven't) is pre-rebanding.

>Could I listen to TYPE I AND TYPE II at the same time?

No problem, since these are both Type II, but yes.

>If yes, in which order should I enter these frequencies in my bank?

If you had a I/II mix you'd have to enter them in separate banks.

>Do I also need to enter the fleet IDs or does this receiver do that
>automatically? (the IDs are also given on the web page above).

You have to enter map information for Type I systems and for all
trunked systems you either enter the Talkgroup IDs you want to listen
to or you listen to them all.

>I had them all. The hotel's main frequency was 150.90500, but it also
>used the following four 462.32500, 462.57500, 464.03750 and 469.03750.
>In two days of scanning I did not identify any specific service using
>any one rather than the other.

Some of the 460 frequencies might have been trunked, and they don't
separate by frequency, they separate by talkgroup.

I am not in Defense of K1MAN.

I have been licensed since 1967 and W1AW Has always Came right on FREQ with Code practice/ Bulletins. With High power .. Never any considerstion for Who was already using the FREQ. No one at W1Aw was checking the FREQ Before Transmitting .

Why Doesn't The FCC take away the club license for W1AW ?

I sat Treat Every licensee The SAME !

Has W1Aw Cleaned their operating Practices ? (I have not turned on My HF gear since 1997) So they may have Cleared up There OWN Transmissions

Dumbass, it don't take a lawyer to read the rules. I've been active both with the FCC and the House and Senate Subcommittee on Telecommunications in regards to FCC rules and regulations and FCC abuse of their on rules and regulation. The fact is the FCC MUST issue a FINAL ORDER before FCC can actually be shut down. The FCC tried to shut down some pirate radio stations down a few years ago, but the court throw out the FCC injunction because the FCC didn't issue a Final Order. Under the Administrative Procedure Act (APA) a government agency must have Administrative review of any rule or violation, in which those accused of violating the rule can raise challenges to the violation, including Constitutional ones. After the Administrative process is done the accused can appeal to the US Court of Appeal and the US Supreme Court. K1MAN was give a NAL, a NAL is not a final order, the Fucking FCC will tell you that, until a final order is issued and all his LEGAL avenues he can continue to operate his station. The FCC can go to the courts and have the courts stop him while the administrative procedure and legal process is going on, but 1. they haven't done it and 2. they have to show why it's in the public interest and what harm would be caused by him remaining an operator. I would suggest you read PART 0, Part 1 and Part 2 of the FCC rules and regulations, it don't take a fucking lawyer to read plain language rules.

The son of a bitch (may he rot in hell!) ripped me off on my 780XLT about 8 or 9 months ago. We were supposed to even swap my 780XLT for his AR3000A. He gave me the run-around on delivery and I never got the AOR. I then found out that he ripped off a bunch of other people too. Yeah, there was a detective from Elkhart PD looking into it, but I chalked it up as a bad experience. His phone number was disconnected. I'm over the situation now, but I wonder whatever happened to him? Anybody know?

Frank

Do you think you crossposted this to enough newsgroups, moron ? The K1MAN issue is worn out, and nobody cares any more. I could care less if he takes over for the ARRL. My rigs have been gathering dust for years. What has the ARRL done for you lately ?
The entire ham bands are becoming another CB band, while the FCC sells off huge chunks of it, to fund their operation. The funding cuts they got a few years back ensured they would have a motivation to do just that. Appliance operators and CBers. That's what you got now. They change the rules and license classes about once a week, just to make sure nobody gets too "fond" of a particular spot, then they dont have to listen to too much screaming when they sell that segment off to some commercial interest... Just keep 'em moving along, mahony....
Want to fight to save amateur radio ? Then don't forget to pray to Saint Jude.... Because it's a lost cause, dude...

So the FCC is forced to issue a final order and can then shut itself
down. Well, I'll be darned.

Sorry for the slow reply,

My main issues are overload from paging transmitters.
I'm also located very near the counties EOC which often uses the
transmitters for normal dispatch.

I also live in a valley which needs a good outdoor antenna for reception but
at the same time, I'm in an apartment so I'm limited in what I can put
outdoors.

A good receiver such as my old RS Pro 2004 and 2006 work well due to the
triple conversion I guess.
But some of my more expensive receivers like the AOR8200 seem to pickup a
lot of noise from the paging transmitters.
I'd love to be able to search from 108 all the way up to 136 without any
signals other than air traffic but I know that is impossible with a
multiband receiver with a wide open front end.

So my question is, does the AOR airband filter work in reducing this type of
interference from local paging transmitters in the vhf band?

All I need to know!

Thanks

No the FCC must issue a FINAL ORDER before they can shut K1MAN down,
this bullshit idea that an NAL is a FINAL ORDER is that, Bullshit. Ham
Operators have it in their head that once you get a NAL it over, but
that not true, there is LONG process and sometimes can take up to three
to five years before it's all done.

I just got my ass kicked by a patrolman for playing my scanner radio real loud near a crime scene. I played it through my car speakers as a hostage situation was unfolding. Apparently the guy killed himself while they were trying to talk him out. I think he heard the cops making fun of him on their raidos. Do I have a case? Am I entitled to any money in a settlement?

Hi Al,

Thanks for all the explanations!

Let's see if I got this right, ok?

First, for Miami-Beach and Miami City I program all the following into one bank:

854.9625, 855.2125, 855.4625, 855.7125, 859.78750, 859.91250, 860.78750 and 860.91250.

and I tag each of them as "MO" for Motorola Trunking.

I ignore all the alternate control channels listed as "blue" on the webpages you listed, right? (but then why would that be?! would I not need them also?)

Since I want to listen to everything that is going on, I do not enter and talkgroups IDs.

Should I want to listen to Miami-Dade *COUNTY* police I program EDACS into another, separate bank. But which ones?! Are police "LG & Fire" or "Public Safety"?

Also, say something big happens, how do Miami-City, Miami-Beach and Miami-Dade County cops talk to each other?!

Any further pointers would really be appreciated!

Thanks,

VS

PS: I do not think that the hotel frequencies were trunked, but since I was running only the Singnal Stalker mode I suppose I might not have noticed. My impression was that there was no distinction made between any talkgroups, pretty much everything was happening everywhere.

I would suggest you put the Miami Beach and City of Miami control channel freqs in two separate banks. If they are in the same bank, the scanner will monitor one or the other system, but not both. If they are in separate banks the scanner will monitor one for a while, then the other for a while, and if entered and turned on, Dade County for a while.

I suspect these systems are so busy you will be overwhelmed with calls, and will find it difficult to sort them all out. You may wish to 'close' the banks and monitor only a few of the key talkgroups.

you might be on the wrong track, maybe your problem isn't overload.
I recently had troubles with paging transmitters with my AR8200 and managed to sort it out. I also thought I was getting overload
but it turned out not to be the case. More info from you is needed. What frequency are you getting the problem on? What makes you
think you're getting overload on that frequency? (be precise) What software are you using to decode? Are you controlling the
scanner with PC software? if so, which prog? And most importantly, are you using the scanner's earphone socket as your audio
source?

That depends. With GRE scanners and Motorola systems, you can program
more than 1 system in a bank, as long as there's at least one
not-locked-out conventional channel between control channel groups.

Really? So I could stack two Motorola trunked systems in one bank on a
PRO-95 as long as I stuck a "divider" conventional channel between them?
That's intriguing. Too tired to play with it right now, but I may
have to give that a go tomorrow night.

>and 860.91250.

>and I tag each of them as "MO" for Motorola Trunking.

Set the mode for the bank as MO and the mode for each channel as MO.

Program 854.9625, 855.2125, 855.4625 and 855.7125 for the City, then
any conventional frequency (it doesn't have to be in use, but it can't
be locked out - 146.55 will work, if no hams are using it) then
859.7875, 859.9125, 860.7875 and 860.9125 for Miami Beach - assuming
you have a Radio Shack scanner.

>I ignore all the alternate control channels listed as "blue" on the
>webpages you listed, right?

Good idea, since there are none for either of those systems. (Black
is not blue.)

>Since I want to listen to everything that is going on, I do not enter
>and talkgroups IDs.

>Should I want to listen to Miami-Dade *COUNTY* police I program EDACS
>into another, separate bank. But which ones?! Are police "LG & Fire"

In the Dade County system, police talkgroups are listed in the Police
group - TGs 512-737.

>Also, say something big happens, how do Miami-City, Miami-Beach and
>Miami-Dade County cops talk to each other?!

Dade County, with their EDACS radios, can't talk to the others on
their Motorola radios. Miami and Miami Beach, being on different
systems, can't use those radios to talk to each other either. They
either have some interop system (a second radio) or the dispatchers
use the phones a lot. (They probably have direct lines to the other
agencies.)

There's quite a difference between someone being a liberal and someone
"spew[ing] any liberal crap". What you're doing is called "bait and
switch", and it's a fallacious method of argument.

People do it all the time, and it works.

709. Can a FRS radio "fry" a scanner? Motorol vs RadioShack FRS channels

Newsgroup: rec.radio.scanner
Date: 2006-02-22 17:12:10 UTC
From: tnozh@yahoo.com
Message-ID: <1140628330.402318.8930@g47g2000cwa.googlegroups.com>
Source record: 9989

Hi everybody,

My family often uses Motorola Talkabout and Radio Shack FRS radios.
Once my daughter pressed on the PTT button while standing within 6-7
feet of me. After this, the channel I had been using on my reciever
was broken (although all the other channels worked just fine).

I have now aquired a Radio Shack PRO-97 scanner which I use for, among
other things, monitoring my kids playing outside. Is there a risk that
a close-distance transmission from my kids could "fry" my scanner or,
at least, one of its frequencies/channels?

Do you keep you scanners off when FRS are around?

Also,

On the following website
http://support.radioshack.com/support_tutorials/communications/cfq-rdio07A.htm
Radio Shack says that Radio Shack and Motorola have different CTCSS
frequencies. However, on my two FRS sets it appears that they are
using exactly the same ones. For example, when I set all my FRS to
channel 8, CTCSS 28, my PRO-97 receives them both very well on CT:
162.2 which, according to this web page should work for the Radio Shack
but not the Motorola FRS. Conversly, when I set the CTCSS on the
Motorola on 26 as this website suggests and my scanner's CT at 162.2 it
ignores the transmission.

Any idea what might be going on? Did Motorola FRS change their CTCSS
frequencies? Is the Radio Shack info just wrong?

Cheers,

TN

I use GMRS 4 watt radio's at work and have a RS Pro-95 and Uniden 246. If
the scanner is within a foot or two of the radio when I key up it knocks the
signal out on the scanner. I have been doing this for years started with a
Pro79. The scanners work fine.

I might be obtuse (in fact - I know I am), but I don't get it. What
are black, red and blue frequencies listed by radioreference.com
(http://www.radioreference.com/modules.php?name=TRSDB&sid=206 ,
http://www.radioreference.com/modules.php?name=TRSDB&sid=207)

Which ones do I need to enter into my scanner to listen to all the
police frequencies?

Thanks,

FRS radios are very low power, and will not damage your scanner.

As for your second question about CTCSS tones, and Motorola vs. the other guys...The Motorola FRS tones can be different from other manufactures, depending on the model.

Look at <http://www.radioreference.com/modules.php?name=TRSDB&sid=722>
and you'll see the difference between a blue frequency (866.36250, for
example) and the black ones on the links you posted.

>Which ones do I need to enter into my scanner to listen to all the
>police frequencies?

Red and blue, not black. (The red and blue ones have asterisks after
them, the black ones don't. The asterisk means control channel.)

I regularly run 30 watts with my scanner turned on (with the internal
antenna inside the car and the transmitting antenna outside the car).
You'll find that many people and even public service departments and
media organizations do the same. Would I put my scanner near my
transmitting antenna? No. But I checked out the Close Call function
of my BCD396T with a 5 watt portable about 2 feet away.

BTW, the only way to "break" a single channel in a scanner would be if
it were crystal controlled and the crystal broke. You might knock out
a band, or a group of bands, but not just one channel. If the scanner
was programmable maybe you should have tried reprogramming it.

ok. let me re-phrase my question.

If one want to listen to Motorola trunked frequencies, what should he/she understand about the difference between primary control channels, alternate control channels and the rest of the channels (i.e., "black" channels on radioreference.com)? Why should he/she enter some of them in his/her banks but others not? What do these channels do for trunking? What is their function/use?

(please keep in mind that I am *very* obtuse and even the obvious (to others) needs to be explained (to me)).

Hi everybody,

Thanks for the explanations.

However, I still wonder, what makes a FRS receiver fundamentally different from a scanner in the inability of the former to handle close transmissions (my daughter did "fry" this one channel on my Motorola FRS).

Any ideas as to why one is so fragile and the other is not?

Greetings
In my opinion, the only way you could 'fry' your receiver is if you
litterally touched the bar antenna of the transmitter to the bar
antenna of the receiver...
In that case, you probably would just need to replace the 'front end'
amplifier..
Hams often 'test' receivers or transmitters by pressing the mike button
and listenning to themselves of the nearby receiver.. on the same
channel on simplex...
Just 'don't' touch the metal antennas together...

Ok. The system may use any of the primary or secondary control
frequencies at any time. Some switch on a regular basis - hourly,
daily - others use all but one primary as voice frequencies, and
switch one of them to control duty when the normal control transmitter
has a problem.

Now that you understand control frequencies:

You can program all the frequencies - red, blue and black - into your
scanner. Different scanners do things differently, but if you're not
in a "control channel only" mode, if a voice channel gets added, you
have to add it or you miss calls. In control channel only mode, you
only have to program the red and blue frequencies. (Programming the
black ones just wastes scanner memory.) The scanner looks for the
voice channel number on the control frequency, then looks up the
frequency in an internal table and goes to it. If a voice channel is
added the scanner still goes to it, without your having to do
anything.

It's also a lot easier to program 4 control channels than loads of
voice channels.

Either it's crystal controlled and the crystal is bad, or the channel switch is bad. If you fry the front end it won't receive. If it receives some channels, the front end isn't fried. It's a coincidence, but I doubt that a nearby signal would fry either a crystal or a switch. It's possible, but so unlikely that it would be something technicians would talk about for a while.

If it's a programmable scanner, have you tried reprogramming it? Simpler
yet, maybe you just hit the L/O (lock-out) button?

I don't think Gommert has an attitude problem. He writes excellent software for a multitude of scanners, and exploits all their features! The software looks great, and works as advertised. It's well supported too! You can email Gommert directly, and he responds, and provides answers, fixes, and updates to all his software products.

I've purchased ARC780, ARC250PRO, and recently ARC396PRO. In another week, or so, I'll probably purchase ARC330...still waiting for the radio. I've been totally satisfied with Butel's software, and Gommert's support! Gommert also participates in the Usenet newsgroups, and on Radio Reference as well! I think he is definitely an asset to the hobby!

He works hard, and wants to get paid. What's wrong with that? Why should he give it away?

1st Responder Wireless News has completed the Acquisition of four companies to add to its growing emergency alert notification system: TAC-9 Paging, East Coast Paging and Wireless Systems, Virginia Fire Net and Toronto Fire Net. Additionally, the company acquired theTAC-9 national affiliate's server that provides communications for several other systems across the country.

"TAC-9 and East Coast have been two of the leaders in this industry for well over 10 years and not only are we fortunate to have acquired their companies, but the wealth of knowledge that comes with them," said 1st Responder Wireless News General Manager Scott Donnenberg. "We are not only looking forward to integrating the tremendous base of dispatchers into our system that comes from these acquisitions, but I'm very fortunate to have learned so much from Paul Trahon and Steve Hooke along the way.

TAC-9 Paging is not only one of the largest paging companies in the country, but its server and its technology have been used for many years as the central processing point for several other groups across the country. It has also established the largest multiple alarm reporting affiliate network in the country.

"I'm very excited about moving forward with 1st Responder Wireless News and our customers should be as well," said Steve Hooke, President of TAC-9. "With the experience and relationships TAC-9 has developed, combined with the cutting-edge technology 1st Responder has in place, it's a marriage made in heaven. I've also had the opportunity to see the exciting plans 1st Responder has for the future and our customers should look to many new and exciting features and services in the coming months."

As one of the pioneers in the wireless news delivery industry, Paul Trahon of East Coast Paging has been instrumental in developing much of the early-stage paging technology and logic that is still in use today, as well as establishing many of the dispatching SOPs widely accepted in the industry." East Coast Paging has been the leader in fire and news paging since we started in 1990," said Paul Trahon, President of East Coast Paging. "During the past 16 years, we have strived to provide our customers with the latest in technology and customer service second to none."

Trahon added that he "thought long and hard to make the decision to move over and let someone else take the reins of the business. That in itself was difficult enough, but a miniscule of a task to find the right person or company that had the same moral values and ideals as East Coast.

Finally, 1st Responder Wireless News came along. I've seen the future technological plans for 1st Responder and without a doubt they will take the paging and news industry beyond the next level of what any fire buff would ever want in a news system." Since its first acquisition of Metro Fire Paging in New Jersey, 1st Responder Wireless News has also previously acquired the Maryland Fire Network and the National Incident Notification Network. With the completion of these latest acquisitions, including expansion in Canada with purchasing Toronto Fire Net, the company has become one of the largest emergency notification services in the world.

"When 1st Responder took its first step into the arena of emergency breaking news notification about a year ago, we did so with the mission of building the most comprehensive, professional alert system in the nation,"said Joseph P. Belsito, President & CEO of Belsito Communications, Inc., the parent company of 1st Responder Wireless News. "While we continue to raise the bar with our cutting edge technology, we have not lost sight of the fact that our system is a home to the best dispatchers in the country who welcome being a part of a professional system that appreciates their hard work and lets them enjoy being a scanner enthusiast by providing them the best tools in industry. "Belsito added that 1st Responder Wireless News continues to negotiate acquisition and licensing opportunities with other emergency notification services across the country and expects more activity in 2006. "We are committed to providing our customers with the most comprehensive coverage in the nation, and our dispatchers a professional, fun and exciting atmosphere," Belsito said. "Our system has come a very long way in a relatively short period of time and I can confidently say the best is yet to come."

If you would like more information about becoming a customer or dispatcher for 1st Responder Wireless News you can visit www.1stResponderWirelessNews.com or you can call the office at 888-595-NEWS.

733. New Yahoo group for Chicago radio hobbyists

Newsgroup: rec.radio.scanner
Date: 2006-02-26 02:50:03 UTC
From: "troubledstorm9x@sbcglobal.net" <troubledstorm9x@sbcglobal.net>

Does someone know a very cheap price like around 200 to 350$ range BC796D BASE SCANNER?? I went to HRO, and let me tell you....I can pay for a trip to Europe for that kinda money on what they were asking for...like around 515$.....Thats very pricey IMHO....

Can somone suggest anything further??? I do want the 796D and nothing else...

And BTW - How can I program the Talk Groups?? My local Police departarment is running on an Motorolla Type 2 radio transmitter site...And plus they are using a Trunked Analog/Digital mix for right now I guess until they switch fully to Digital...I gues there running on an ICIS Trunked radio call frequencies....So I grabbed the frequency directory book and looked at their frequecies and alot of them have TG:#### (whatever that means so I would like start learning on how to program these before buying a scanner like this...for cheap of course...

The sales guy was very nice...He said if I did had purchased this scanner, he can download all the APCO based frequencies for me...

He also said it is a real nighmare now to listen to these frequencies now..

I hate to tell you that $515 is not a bad price since we only pay $496
dollars for the scanner.. I just checked our wholesale pricing on it.

1. You'll be missing a lot if you settle for the 796 instead of
getting the 396 or waiting for the 996.

2. The price is about normal - $500-$550 for a digital trunking
scanner.

3. <http://www.radioreference.com/modules.php?name=RR> for
frequencies, talkgroups, etc. Download the Uniden UASD for the
BCD396-T and you'll be able to program the frequencies, talkgroups,
etc. Then, if you buy a Uniden that comes with UASD software, you'll
be able to program the scanner with the software and the system files
you've saved.

739. Looking for either Ron Kelly or Ron Hensley of Cushman Electronics

742. TrunkPCR Update 0.7.185 Available

Newsgroup: rec.radio.scanner
Date: 2006-02-27 07:12:36 UTC
From: CrazyC <crazy__c_@hot_mail.com>
Message-ID: <9ExMf.109769$4l5.14010@dukeread05>
Source record: 9922

Hi all,

You can now download TrunkPCR Version 0.7.185 from the website:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes a couple bugs:

Jan 26,2006 - Fixed: Edacs Hunt CC On Data Loss.
Jan 27,2006 - -----: Limit Pic Off Now when Trunking.
Jan 29,2006 - Fixed: Current Bank updated if changed in Channel
Organizing.
Jan 29,2006 - Added: COM Port Status Indicators (Ctrl-Q).
Feb 03,2006 - Added: Trunk Settings Window Position Now Saved.
Feb 03,2006 - Fixed: Group/Radio Counts Updated in CC Activity when
Deleted.
Feb 04,2006 - Added: More Short-Cut keys to Menus.
Feb 08,2006 - Fixed: Adding New Group ID as HEX in Trunk ID Editor.
Feb 08,2006 - Fixed: Adding New Radio ID as HEX in Trunk ID Editor.
Feb 08,2006 - -----: Increased Width of Trunk ID Editor.
Feb 11,2006 - Added: Display Misc Messages in CC Activity - taken from
Dump.
Feb 12,2006 - Fixed: Private Calls in MOTO doesn't save Radio ID as a
Group ID.
Feb 12,2006 - Fixed: One Moto SysID Message was being treated as a Call
Message.
Feb 13,2006 - Added: Moto CW Id Freq/Chan Now Noted in CC Ativity.
Feb 13,2006 - Fixed: "Delete Off Air" in CC Activity - 1 Entry now
Removed.
Feb 17,2006 - Added: Group Desc now Editable from Patch List in CC
Activity.
Feb 17,2006 - Added: More Descriptions to ***Unknown Radio Messages***.
Feb 20,2006 - Added: Moto Diagnostic Messages in CC Activity.
Feb 26,2006 - -----: Changed I.F Filter to 15khz when 3600 Baud Selected
in Trunk Settings.
Feb 26,2006 - -----: Group/Radio ID's Erased in Trunk Settings when
confirmed.
Feb 26,2006 - Fixed: Editing ID's greater than 32767 from CC Affil or
Control List.

Version 0.7.185 Released 02/26/2006

Regards,
Jay

Im looking to step up from the old pro2006,2048,39,61 & others to a higher level, first i would like to know if there is any software that will let the icom 100,1000,1500 or winradio pc scanners receive digital audio? Or will one of the latest Uniden digitals be a better choice, I dont know of any digital audio signals around yet but im thinking of something that will continue to usefull in the future, also to expand my scanning to some new areas beyond the range of the typical pro or uniden analog entry level scanners.

The Icom IC-R10 is "ok", nothing exceptional. It's an older design. If you're going for that type of radio, I'd spend a little more and get the Icom IC-R20. The scan speed on the R10 is very slow!

Be advised these types of radios are much more difficult, and confusing to operate than the scanner radios you've been used to. They have a lot of dual, and sometimes triple function buttons, and it's a whole new learning process that leaves everyday operation depending on your good(?) memory!

Hello folks,

I hope that someone might be able to answer a question for me: does the MFJ-1714 have any coil in it which would serve to attenuate frequencies below the 2m amateur band for which it's apparently designed?

http://www.mfjenterprises.com/products.php?prodid=MFJ-1714

Or would this antenna serve well for frequencies below 440 MHz on a handheld scanner?

This antenna at scannerworld.com *looks* to be the same as the MFJ-1714, and it's marketed more broadly as a "3db GAIN VERTICAL TELESCOPIC BNC ANTENNA FOR SCANNERS". Any idea if this is the same antenna as the 1714? It does cost some ten bucks more than the MFJ ($26.99, as compared with $16.95 for the MFJ).

Thanks in advance for any assistance on this matter.

Junius

Oh, seems I forgot, here's the link for that scannerworld.com antenna
that looks to be a MFJ-1714 clone:

757. Pro 97 volume problems

Newsgroup: rec.radio.scanner
Date: 2006-02-28 23:56:58 UTC
From: Allen Crawford <acrawford5@hot.rr.com>
Message-ID: <er5Nf.57129$7y1.7188@tornado.texas.rr.com>
Source record: 9937

I recently purchased a pro97 scanner in near new condition over the internet through ebay. The item was
listed as having very low audio such as one has to place the speaker next to his ear to hear the broadcast so I took a chance and bought it for 45 dollars. I got it in yesterday and it is totally new! packaging, all accessories, books and not a scratch on it. Well. I unpack it and install freshly charged (new) batteries and
I go to playing with it..first..a weather channel..sure enough, very low volume even when cranked to the fullest
it is still at the same volume level. I went ahead and took out the four back cover screws and examined the area
where the volume pot is soldered and took some readings. center tap is about 2.1kohm and 200 k ohm on the non grounded side. (this is without power applied)
in the area of the volume/squelch pot, are 3 tiny pots
and 3 test points...(this is all from memory as the scanner
is closed up now). I was hoping for a misplaced speaker magnet or something simpler and the circuits are ungodly
miniature and even the audio amp chip is about the size of an op amp on most regular size circuits. The doggone thing is so new looking, that it may be swapped with a
newer one from radio shack (by swapping backplates) but I don't dare attempt the dishonest. Anyway, any suggestions to resolve my dillemma...could it be possible that I have a defective volume pot? No amount of regulation seems to affect the audio at all. The channel
beep come through loud and clear but it seems that either
the preamp from the radio is set too low or the pot is defective/soldered wrong. Of course, the possibility of
a bad IC has crossed my mind as well. Any suggestions?
No warranty so all I have is either a repairman or my good wits and some knowledge to help correct the problem. Btw, the sqelch seems to work OK.

Your input would be greally appreciated,

Allen

Might be a bad pot. If you have a meter, with power off measure resistance from center terminal of the pot to ground. Turn the volume knob through its range. If there is no resistance change, order a new pot. This is what I have for ordering the volume pot: 12429163 POT VOLUME 50K OHM $15.89. Be sure to verify the correct part number if you do order one so you don't get the wrong part.

what does it do to a set of phones or ext speaker?
my thought lie with a naff speaker.
even though the beep is ok.
have you a sig gen? or maybe stick a radio from the eaphone socket to two bear wire and put them across the scanners speaker after disconnecting the scanners own feed, does it work ok then?
you need to find out if it is the scanner at fault or the speaker as the dirst step.
if an external audio source works, then time to scope the i/p & o/pof the audio chip.
should be easy to do.

Thanks Mike,

I tried an amplified source via the earphone. The
Amplifier was a Klipsch 2.1 (200 watts) the audio was barely intelligible.
the background hiss was overbearing
and a beep tone at the same amplified volume level was
well beyond tolerability. I will try your other suggestions
as I do have a tone generator that I could get out of mothballs.

regards,

Allen

Is the beep affected by the volume pot? I have the Pro-96 and the volume
control is awfully hair-trigger - goes from nothing to too damn loud in
the first few degrees of movement and then there's not much left for the
rest of the adjustment. It may be a 'design feature', though yours
suggests an actual fault of some sort. Can you get to the volume pot and
listen with an earpiece on the various pins to ground?

Cheers.

Ken

I believe it is for the combination. That might account for the high price. The beep probably bypasses the volume control in the circuit. Since it is loud and clear, the audio amp chip is ok and the speaker is too. Note that the volume pot is 50K from one end terminal to the other. If you get a higher reading than that from the center terminal to either end, that is a clue that the pot is probably bad.

The 2 meter band is 144-148, not 440. The coil is a loading coil - it manes the antenna electrically longer, it doesn't cut off any frequencies.

>Or would this antenna serve well for frequencies below 440 MHz on a
>handheld scanner?

It's a bit long (cumbersome), but it should work.

Ken,

the "beeptone" is virtually unaffected by the volume
control and remains constant from the near off position to
max volume. I only wish I could get to the contacts
while the unit is powered up but it is sandwiched with
a lower speaker/display/keypad board and they will
not operate when separated. so all my experimentation must be done with the
component side only:-(\

regards,

Allen

>
Frank,

I am inclined to go with that too. I am going to have to get the
spouse to help with the pot turning while I hold the fluke leads. I will
give back the readings with respect
to ground later and see what you think. there is a stack
of 3 soldered leads which leads me to believe that 3 are
on/off, 3 are volume, and 3 are squelch...darn squelch
definately wants to parallel the movement of the volume
too....damn poor design for such a nice spec'd receiver.

Thanks Honest John,

Well, the scanner is still displaying, responding to calls, and giving low
audible output. But if your theory is correct, I'm screwed:-(...I won't
give up hope...I am going to try the pot and hope like heck that is all it
is.
I would fare better off buying a new one if I had the problem you described.
Thanks for the input and let's hope for non-failure of component/s:-)

In addition , you will turn it one one day and find that it does no
longer works.
Outfits like this have been shut down in he past and after their
records are seized the authorities go after the customers.

Try hanging a 47k resistor between the high end and the center pin of
the pot and keep the pot about at the center. It's not a fix, but if
it works a little, you know the pot is shot (open on the high end).
You wouldn't be happy spending $15 for a pot to discover that it's not
the pot that's the problem.

Hello:

New at this:

Regarding the Coast Guard S&R frequency of 237.9 that I recently read
about:

Is this the primary S&R freq used most everywhere ?
Is it used for air to ground and also ground to air usage by the C.G. ?

Is it an AM mode

Are all freq's between 225.000 and 399.950 (always) AM ?

Thanks,
B.

Doubtless this won't be the last time you plug this site on the NG's, but I think it would be a good action in future to mention
that this site will at some point indicate it requires payment from you. Requiring payment is not a bad thing, but people generally
don't like surprises. I didn't.

Just wondering, if you tried to do a re-set of the radio? I doubt that
would do anything, but it might not hurt.

It doesn't require payment to access all the basic features of the site. It only requires payment for a few value-added features, such as the pdf-formatted trunked data. Don't make a mountain out of a molehill. Most users end up making a small contribution to Lindsay, not for the added-value features, but to help defray the costs of running such as excellent site.

reposted from the LiveScannerAudio list

Hi All,

Slightly Off topic:

I am building a satellite project that will send JPG images from the International Space Station. The project is called SpaceCam and it will send 480 images from orbit each day.
I am interested to know, if there is much interest in the Scanner listening community to listen to and decode these images.

ISS Setup:
The transmitter from the Space station should be strong enough for people with a scanner and a basic outside antenna to hear and decode some of the images. The system on ISS will be transmitting at 5 or 10 watts in standard 5k deviation FM, into a 0 dBd antenna system. ISS will be in range 8-10 minutes per orbit, for up to 6-7 orbits (passes) per day. The frequency will most likely be 145.800 MHz FM (this may change)

What you will need:
A receiver that can support 145.800 MHz range.
Outside antenna (0 dBd or better, or a small beam 4 element works good)
Also a PC running one of the many Share ware SSTV decoders.

What you will get:
The plan is to send 1 JPG from ISS every 3 minutes. With a good antenna you should be able to receive up to 3 images per orbit / pass. The images will be small JPG's aprox 50k. The selection will be what ever the Space Station crew puts in the down link folder. We may have the option in the future for LIVE stills.

Questions:
Is a project like this of interest to the majority of the scanner listeners?

If we moved the frequency from (2-meter band) 145.xxx MHz to (10-meter band) 29.xxx MHz, would most people still be able to monitor the frequency.

Which band would you prefer?

SSTV Space Cam project

> > >
> > >

OK..there is not hard reset button on this one, like older models. You
initialize by going through a sequence of turning off/then on the scanner.
While the splash screen
reads multi system trunking...etc. (you usually have 5 secs) then you press<
0 1 enter >and wait about 5 seconds as it tells you
that it is initializing. You lose all your presets but mine was set by RS
anyway. No help though...still just as
quiet as before...He! he! sorta reminds me of the day
when I got my first crystal set:-)

Thanks all for the suggestions,

regards to all,

Allen

I am driving down the road and I hear a call to either Police/Fire/Rescue about an accident and IF It is on the same road -- I have every RIGHT to know so that I can slow to a safer approach until I see it and just let the other assholes yapping on the cellphones roll on by.

If I am on the Vol. Fire Dept. or Rescue then I may continue as a first responder in a safe manner and not cause another accident.

But I am not on either the Fire or Rescue/EMT teams, so therefore I will maintain my watchful eye for the accident ahead.

I have, in rare situations, rendered assistance with traffic awareness until Virginia State police/County units and fire/rescue arrived and advised them that I was not a witness, yet I stopped to check if someone had called in.

They welcomed my assistance and thanked me and said,"Alright, Sean. Thank you very much and be careful going home / to work. We'll take it from here, now. Good job."

That's what involvment should be. Yet, some localities will look at you as though you are impersonating law enforcement.

I have lived in Amelia County, Virginia for 35 Years.

I know a fraction of Local Law enforcement units, Fire and Rescue/EMTs, I also know some in the Virginia State Police.
They know me --- IN a Good Way.

I would like to ask a question to those who might know what I am talking about.
(This has been my concern for quite some time and wanted to know if it is just me or some folks feel uneasy about me being around them.)

When I was real young, I used to climb up into the cab of the Fire Trucks or Ambulance, or in the police car.
I am grown up now, and when I go near these vehicles I notice some members look at me in a "Who the hell is he andwhy is he coming over here?" look.
As an EMT or Firefighter or Police officer, I would greet someone, regardless of age, in a cordial manner and invite them to look inside or sit inside as long as they didn't take off or scare someone with the siren/horn (with a chuckle.)

I feel a repulsive attitude coming from those who are on the Fire or Rescue/EMT teams when I even come near them.

What have I ever done or said to these people that are acting this way and yet turn around and are laughing and joking with those in their "clique".

I would speak to them in a cordial manner and all they would do is look at me and shrug and I would hear them whisper to the others that "his daddy runs the schools that's why I don't talk to him."

I am also a Ham Radio operator and in Amelia County, Virginia -- your'e not considered good company around EMTs and Firefighters and Local Law enforcement.
You're looked down upon because you have radios that can receive their frequencies.
It Is Illegal for anyone to transmit on those frequencies, unless they are with the County Sheriff/ Fire or Rescue.

We don't mount Red lights on our vehicles where ever we go.

We have Mobile Command Stations, antennas, radios, and equipment that can take the place of cell phone and/ landline phones when power is disrupted.
We use HF, VHF and UHF radios and can do autopatches and conduct emergency nets and training operations over amateur radio frequencies.
We can talk to other stations around the world.

And yet, we are considered bad company around others when helping out in a disaster situation.
Some places in the U.S. Welcome Hams!
I guess it depends on who really knows you anymore when you're a Ham than it's who you know or don't know.
(I tried to make it sound good or make sense of it)

I will now come down from my tower now.

Tnx.

Sean

I fall into each of the aforementioned catagories. Scanner listener, (Former EMT and Paramedic) - now Vol. Firefighter, Amateur Radio Operator AND EMA Coordinator.

I am just going to "suggest" that given today's attitude of "be aware" - many are doing just that. Around an EMS or Fire Rescue Unit that may carry drugs, perhaps there is fear of drugs or the paraphenalia being stolen. After all, at least around here - what is in those boxes - "better" be accounted for.

Otherwise EMTs, Firefighters "should" try to give some guided tours of the equipment if time permits. It instills a sense of respect and knowledge in the public - knowing that those groups are equipped to deal with most any emergency and the firefighters/medics are their friends.

As to Hams - many Public Service folks who are not hams could care less about hams - or CB for that matter. To them, you're in the way. Trying to play a role you're not suited for. We fought an uphill battle here to get some of our guys to accept ham. One fateful night when the fire radio was swamped during a major flood and rumors running rampant about a dam burst - I was able to allow several to listen to a couple hams "standing" near "that" dam - and say with certainty - the dam was NOT being compromised. They were able to then disregard the still unconfirmed rumors on the fire radio and believe all was going to be ok. They were proven right when the dam did not burst. "That" sold them. NOW - when there is an emergency - they think I'm naked if I don't show up at our Command center with any radio equipment. They're so used to watching me set up my emergency comms gear - 2 meters - 440 and H.F. I'd do CB too, but many of those I knew - no longer are on CB and the rest don't get on until the wee hours of the morning to chat. That is of no help to me. Anytime we have a warning issued for flood, tornado, etc..... most who may not hear the radio - see me and another person heading to the command post - they say - Gloom and Doom are going to the station - something is up - they know we don't go there for nothing. At the very least - if not carrying my Ham Comms equipment, I have at least a portable scanner, my Fire pager, Fire Radio Portable and my laptop with my disaster plan stored on two separate disks - with me.

By standers or people going down the highway CAN stop at an accident to make sure things are taking place - BUT - you must be very careful of any hazards. You could come on some chemical, downed power lines, etc. The best thing to do is yell to the parties if you see any - asking if they're ok or whatever - relay that to 911 from a safe distance. Some brave souls "will" go to the people injured or trapped and have been heroes. Others have become victims.

IF you have a decent rapport with the local Police - Fire - EMS - you may be on your way as to Ham ops - teach someone of them who may lend an ear - what Ham can do. Get them involved. You can tell them too - that many of their brothers and sisters around the country are Ham Ops. One thing is - in a disaster - the "Cell" phones DO tend to be swamped. It happpened during 911 and the great Power Outage of the North East. IF they go down - Technicians do NOT get there immediately to repair the damage and even at that - may NOT be able to repair it very soon. Some comms sites are in remote locations - very tough to get to in a good day. Hams can set up Comms instantly - portable repeaters, etc. There just aren't enough "Technicians" to service a "multiple" comms strike - should one occur. In our area, there are like 3 companies who service like 4 counties. THAT is a lot of coverage. A major hit like Katrina - can and will cause havoc.
So, Hams CAN come in handy - IF they are utilized. BUT the Hams MUST understand - though they may do the comms, they aren't to do anything they're not supposed to OR release info not cleared for "them" to release.

This isn't difficult to set up but it can't be done in a day and certainly without willing participants.
I welcome Hams in my coverage - we operate a "net" and I assign whoever is not in imminent danger - as "Net Control" - provided they can do so without panicing. I have people in the areas most important to me (but not in harms way) - give me updates on what is going on - that I need to know. I ask "Specific" questions. They already know to keep any unwanted traffic OFF the air. Hams and Public Service CAN AND DO work well together if given a chance - and some training is held. They need to be told what to report, what NOT to report on the air - usually if need be - and Public Service Comms are down - a Ham will accompany one of those Service folks. There is also what is called INCIDENT COMMAND. This is established at most any emergency. The first person in - in charge - takes control and sets it up. They use this system to run the entire emergency from start to finish. It encompasses many facets of the emergency. There is "supposed" to be at least ONE person from any group involved Police, Fire, EMS, EMA, Public Works, Ham, whoever is involved - there at the Command Post to report to the Incident Commander and to take his orders and pass them along down the chain. I know there has been an article or two in the magazines that "most" of these services get at their stations - as to Ham Radio involvement and "suggested" using it.

This is the quick and dirty explaination in trying to answer your questions. I try not to go into too much detail so folks not in the system will get confused. There are references online as to Incident Command and so on - you could get some more detail and idea as to function.

Sean,

I'll echo what the other person has said. And add my own spin.

1. At an incident, bystander help has been inconvenient and appreciated depending on the day. Had someone come up to the car and yank a door open on an unstable car prior to the jaws being ready for safe extrication. On another day, had a bystander with medical training who calmed a victim until we could get on scene.

I'll be honest, for general safety purposes, I'd rather have people who are trained stopping than just anyone. They know the risks and should be better able to make an informed risk - benefit decision.

2. When working a scene, my vehicle is off limits unless you are a responder. I'll prepare equipment and be set up for care necessary as soon as the patient hits the back. Afterwards, until I clean up it may be unsafe. The notes on the marker board and EKG strips on the counter are medical information and controlled. Depending on the call, the interior may need to be cleaned and mopped because of body fluids.

Otherwise, I'm open for visitors. I enjoy having people stop at the station or during a PR event. I work for a government funded service therefore it's "their"" ambulance not "mine". Their tax money bought and equipped it. I just get to use it every day I'm on shift. Kids of any age get a chance to see the rig and what it can do. If they have a Walter Mitty moment sitting in the seat, that's OK by me. I get a chance to do a little public education on our phone first, Knox box, or other programs. It's time to help people not be afraid of all the "stuff" that gets carried in the house or to their car when help is needed. And there's that priceless moment - I've had family members come up on these events and say "Were you working the day my mom/dad/child went in the ambulance? Thank you for being there."

3. Scanning the current spectrum is getting to be a pain in the butt. Used to have a broadband scanner or two and keep track of everything in a 30 mile radius. We had low band VHF dispatch, high band VHF operations, and UHF for one police department. Today, it's VHF high band and 800 trunked. But, can't listen to it all. The VHF stuff is still ok. Trunked is another matter. One area uses Motorola, everyone else is EDACS. Thought my RS2052 was doing good then they added a couple frequencies to the tower which changed the channel pecking order and I've been unable to get it to resynch.

Why is scanning important? Our department can't afford 30+ EDACS portables (+ monthly access fees) for all members. With a decent tracking scanner, people can keep track and know when things are hopping before their pagers go off for an off shift call back. As well we can monitor adjacent districts that we don't want to purchase rights into their system for our trunked radios.

just my 0.02

I've heard there are some scanners that can be modified to receive 800 Mhz.
Is there a "fix" for a PRO 71?

Thanks, Don

I'm interested in upgrading my old Regency handheld scanner to a trunking scanner that is capable of receiving signals in the 800Mhz range. While checking various groups and sites, it seems as if my two choices are Uniden BC246T and BR330T. There are no agencies in my area that transmit digital and it is unlikely any will in the near future. My interests are limited to police/fire/EMS. I have no interest in NASCAR. What are the differences between these two scanners? Is there anything about the BR330 to make it worth the extra $50 over the BC246? Are thgere any other scanners I should be looking at?

True, my position would be to monitor traffic to a lane open away from the scene. I have these triangles that I set up behind us so that others can see them. When actual units arrive and set up theirs I will remove mine and pack them up and let them take care of it.

And, I don't dare put anyone in my vehicle in reference to what you said.

No victim is to be moved ---- Unless there is a danger of a fire from the accident. This is before help arrives. If it the vehicles are not on fire --- All Occupants are to remain in their vehicles! Because if one is not supposed to remove them and if they do --- an injury could occur and things could lead to be paralyzation and a lawsuit against the person who moved the accident victim whene there was no danger of the vehicle catching fire.

NO.

AM tends to predominate,but
this area is dominated by the US military, and there are all sorts of
strange RF using things in here.
Satellites, Air-ground coordination links, air-air comms, "squad radios"
(a sort of army FRS) are near the upper end of this band, some ground based
anti-personnel radars..

And just too make it more confusing, the DOD has been recently changing its
band plans (which were never too strict to begin with) for this band.

I just acquired a 785D for our firehouse and was wondering how to program in the pl/dpl in the radio. I am using the ARC250PRO software and picked the appropriate pl/dpl and the tone. I loaded the data into the radio and everything appears to be there, but we still here stations other than the one we entered the tone for. Anyone know of anything I am overlooking??
Thanks John

818. Uniden SC-230 scanner question

Newsgroup: rec.radio.scanner
Date: 2006-03-08 13:47:03 UTC
From: "Joe S." <anon@mous.com>
Message-ID: <is2dnfioCbbefZPZ4p2dnA@comcast.com>
Source record: 9898

I lost my two older scanners in Hurricane Katrina and just purchased a Uniden SC-230.

My old scanners had a MANUAL function -- if I wanted to listen to a certain frequency, I would do something like:
-- hit MAN button
-- enter the freq
-- hit MAN button
-- scanner would go to that freq and sit on it until told to do something else.

I have read and re-read the SC-230 manual and there does not seem to be a way to enter frequencies manually and listen to that one freq.

Can anyone help?

Thanks.

Anyone have a decent Pro-89 you would part with?

Would like to have it complete with manual, charger, and the programming cable and software. Can pay by PayPal

There are a couple for sale on eBay but both are incomplete -- missing items such as charger, manual, etc.

Send e-mail to: deleted (underscore) 2 at hotmail dot com -- remove the spaces, insert the _ and the @, etc., etc.

Thanks.

If you really want one, I would buy it on Ebay. The manual can be downloaded
for free in PDF. The charger should be no problem to find or buy a universal
that will work. As long as you can pay with PayPal using a Credit Card, you
can't be ripped off. If someone tries you get your money back. If you send
money to someone on the net, and get burned, you are just out.

Thanks. The two eBay auctions have a few days to run so I thought I'd see
if anyone has one with all the accessories. If nothing pops up here shortly
I'll put in a snipe bid and see what happens.

Two days after the hurricane my wife and I managed to get into our apartment
and rescue a few pieces of furniture and most of our dishes -- everything
else was a goner -- I did pull out a couple of plastic tubs that held
computer, radio, and camera junk -- the programming software and cable for
my Pro-89 that was drowned may be in that mess -- which we have not yet
opened and sorted out.

823. Basic Scanner with CTCSS Decode

Newsgroup: rec.radio.scanner
Date: 2006-03-09 04:05:53 UTC
From: Bill Powell <whp@att.net>
Message-ID: <1r9v02t20iukoe88m679bu36qbtk5dmi1k@4ax.com>
Source record: 9803
Cross-posted to: alt.radio.scanner,rec.radio.scanner

The time has come to replace my very old Regency/AOR scanner with
something a little more modern.

Right now I'm just attempting to compile a list of current and
recently discontinued scanners that meet my feature criteria:

Need
- CTCSS per channel decode. One tone per channel is OK
Unit must NOT stop on a busy channel just because it's busy
- VHF Low, High and UHF
- Mobile / base form factor

Would Like
- Alphanumeric display
- Programming AND control via PC

DON'T Need/want
- Handheld
- Trunking

It will be used in a high level RF environment (LOS to 8
commercial/public safety/ham towers) so I suspect that I'll have to
add some external filtering but a receiver with some front-end
selectivity to start with (electronically tuned filter) would be
great.

Suggestions?
Bill

I have one, Yes they are nice. Widebanded, but no trunk, and as for
the mod, well you either have to replace the CPU (80 pin SMD) or the
whole board. No longer avaiable (of course) from Europe for more than
4 years.

I think his cheese slipped off the craker.

I am in need of the yellow battery holder (rechargeable) for my RS PRO-79 scanner (actually the current PRO-82 uses the same holder). Radio Shack says it is backordered for the forseeable future, so I was wondering if someone could point me to an alternate source. The RS part # is 12228805.

Thanks...

Bob

For practical purposes, yes.
Anything you are likely to receive in this band without specialized
antennas/pre amps will be in AM.
If you happen across some odd ball freq not in AM, it will still be received,
but garbled.

It depends greatly on your area. It doesn't track trunked systems, or digital. But if everything you're monitoring is analog, conventional, it should work just fine!

http://mywebpage.netscape.com/kenoraradio/

There's lot of info on other Kenora frequencies and some for Manitoba.

Kenora is a very nice town... I spent some time up there about 10 years ago.
The fishing was fantastic and the views over Lake of the Woods were
breathtaking.

Jackie in MN (about 425 miles south of Kenora)

That limits you to Uniden.

>DON'T Need/want
> - Handheld
> - Trunking

You're going to get it, though.

>It will be used in a high level RF environment (LOS to 8
>commercial/public safety/ham towers) so I suspect that I'll have to
>add some external filtering

Motorola G-strips for VHF-lo and VHF-hi. Maybe something like a
U44BBT for UHF. You'd have to add a lot of circuitry to make them
scanners, though.

Scanners have barn doors for front ends. If you want to use a scanner
get used to the fact that you're going to receive lots of intermod in
that environment. You either get a good receiver or you get a scanner
- no one makes a scanner with a G-strip front end, and no one ever
will.

>but a receiver with some front-end selectivity to start with
>(electronically tuned filter) would be great.

The kind of filter you'd need would cost more than a scanner.

Sometimes, you *can't* get there from here.

PLease help -

I have a base Pro-2006 400 channel scanner plugged in to the wall all the time and I just bought a 9-v type battery for the backup power...The battery fits into those prongs or whatever there called and I closed the protective cover after I tucked in the battery inside...Now as I unplug the unit from the wall, it does not turn on....How come? What do I need to check if the batter placement is correctly inserted or not?

Its suppose to turn on right?? Even with the outlet plug unplugged from the wall....

Beats me...

And these are fresh batteries too...I just got them.

The 9 volt battery is just for "backing-up" the scanner's programmed
frequencies, ONLY! Ane not to actually operate the scanner on that 9 volt
battery!

No. The 9v battery is just to keep the memory from being lost when the
power goes off, not to power the unit.

Icom used to offer rebate for communications receivers but the rebate was automatically taken off the total price in the retail store. Now, Icom is joining in the industrial rebate game to ask the buyers to physically mail in the materials to get the rebate. Too bad, just like many other consumers, I am no longer playing this kind of games. As soon as I see something on ad that the final price is published after the mail-in rebate, I skip it. Also, Icom's rebate for IC-R20 is only $20, not something like $100 worth waiting for 3 months and several reminder calls to the rebate processing center, cutting the UPC bar (which makes the retail box very ugly and also it severely reduces the resale value if you want to sell it off eBay later), and submitting the name and address that very likely end up in FCC or FBI's database.

Dayton Hamvention® Announces 2006 Award Winners

DAYTON, OH, Mar 10, 2006--Dayton Hamvention has announced the winners of its 2006 Amateur of the Year, Special Achievement and Technical Excellence awards. Being honored for their contributions to the Amateur Radio Service are Gordon West, WB6NOA--Amateur of the Year; Riley Hollingsworth, K4ZDH--Special Achievement Award, and Dick Illman, AH6EZ--Technical Excellence Award.

Hamvention Amateur of the Year: Gordon "Gordo" West, WB6NOA

Gordon West, WB6NOA

West, of Costa Mesa, California, was named Amateur of the Year for his efforts in recruiting and training many new amateurs, in addition to his nearly lifelong involvement in ham radio. Starting in the late 1950s "Gordo," as he is known, worked for some of the big names in the field helping to develop several innovative pieces of equipment.

In the 1980s West and his wife Suzy, N6GLF, began teaching ham radio classes at college and marine venues and authored Amateur Radio training books sold by RadioShack and equipment dealers around the country.

A Radio Club of America fellow and a recipient of the ARRL Instructor of the Year Award, West remains active from 75 meters through 10 GHz, spending at least a couple hours on the air every day, helping new hams make friends on the many nets he runs.

In addition, West volunteers with the American Red Cross communications team in Orange County, California, and regularly offers free kids classes and classes for cities to support their Community Emergency Response Teams (CERT).

"It's my give-back to a hobby that gives me the satisfaction of offering free classes for kids and emergency responders, and I thank all the ham operators who support our training program, and the ARRL for their continued support with the emergency communication Web-based classes," West said.

Special Achievement Award: Riley Hollingsworth

Riley Hollingsworth

Hollingsworth, who's Special Counsel in the FCC Enforcement Bureau at the FCC's Gettysburg, Pennsylvania, office, will receive Hamvention's Special Achievement Award for his efforts in resurrecting the FCC's

Amateur Radio enforcement effort and helping to eliminate an increasing number of enforcement problems plaguing the ham bands. Hollingsworth's efforts, begun in 1998, reversed more than a decade of FCC apathy in amateur enforcement. Radio amateurs across the US credit Hollingsworth with reducing malicious interference and other problem behavior on the air.

Hollingsworth's other FCC responsibilities include interference resolution in the Land Mobile and Public Safety Services. In past years, he served as co-chair of the FCC's PCS Broadband and Narrowband Licensing Task Force, for which he received a Reinventing Government Award in 1994. He also managed the FCC's 800 MHz Task Force in which new 800 MHz spectrum was assigned in 13 cities, and he organized a Commission enforcement initiative to recover underutilized land mobile radio channels in major cities for reassignment.

A graduate of the University of South Carolina, he received his law degree from Wake Forest University. Hollingsworth was first licensed in 1960 in his home state of South Carolina and is a member of the Quarter Century Wireless Association and F.I.S.T.S. CW club.

Technical Excellence Award: Richard "Dick" Illman, AH6EZ

Dick Illman, AH6EZ

Illman, who lives in St Charles, Illinois, was picked to receive the 2006 Technical Excellence Award for his work as principal staff engineer at Motorola in developing a broadband over power line (BPL) system for his company that essentially eliminates HF interference. The nominating committee cited Illman's technical knowledge and his willingness to help tackle and overcome BPL's thorny interference issues, influencing Motorola to deliver his patent-pending solution, Powerline LV.

Motorola approached the ARRL in 2004 seeking input on a BPL design that could avoid many or most of the interference problems that have plagued some other BPL systems. The company and the ARRL subsequently cooperated in deploying a test stand Powerline LV system between ARRL Headquarters and W1AW. Preliminary results from the ARRL tests have shown the Motorola Powerline LV system seems to be Amateur Radio-friendly.

Motorola introduced its Powerline LV wireless-to-low voltage BPL solution at the United Telecom Council's "Telecom 2005." The ARRL has cited the Motorola solution in filings to the FCC as an example of a BPL system designed to avoid interference to or from Amateur Radio.

Illman, who hold a bachelor's degree in electrical engineering, has enjoyed a 31-year career with Motorola Systems Engineering. His idea to include a set of hardware notch filters in Motorola's Powerline LV equipment to protect Amateur Radio beyond the traditional technique of turning off specific carriers is an industry first.

His passion for ham radio began in high school as a Novice licensee in 1969 and has continued over 37 years on all bands and all modes. It has included everything from working satellites while aboard a moving passenger train to demonstrating ISS contacts to Boy Scouts. An avid DXer he works more than 200 countries each year, in part because of a friendly competition among his fellow Fox River Radio League members in Aurora, Illinois. Illman has been the club's president for the past two years and has been recognized with the club's Ham of the Year award three years in a row.

Difficult Choices

Hamvention Awards Chairman Pat Johnson, KC8ZZO, said the committee faced a tough task selecting the winners from among a number of worthy nominees. "We were impressed with the quality of the nominations," he said. "We believe the winners all represent excellence in service to the ham radio community."

Hamvention Chairman Jim Nies, WX8F, praised the winners. "On behalf of the Dayton Amateur Radio Association and Hamvention 2006, it is my distinct pleasure to congratulate this year's award winners," he said. "Please join me in recognizing each of these gentlemen for their outstanding contributions to Amateur Radio and their many years of devotion to the Amateur Radio Service."

Held this year from May 19 until May 21, Dayton Hamvention, the world's largest Amateur Radio gathering, annually attracts more than 25,000 people to the greater Dayton area. The event includes exhibits, a flea market, forums and educational sessions. More information is on the Hamvention Web site.

847. Mount Rainier National Park - Washington State - ?freqs

Newsgroup: rec.radio.scanner
Date: 2006-03-12 14:01:07 UTC
From: zerg90 <zerg90@gmail.com>
Message-ID: <1142172067.441483.79040@u72g2000cwu.googlegroups.com>
Source record: 9827

The 2005 Fire Management Plan for Mount Rainier Natl Park in Washington State reports that they have repeaters at - Gobblers Knob, Crystal Mtn, Mt Fremont, Tolmie Peak, Shriner Peak, and Packwood. There are also base stations at - Comm Center, Longmire, Crystal Mtn, and Packwood. The Comm Center is at Park HQ at Tahoma Woods. The Comm Center is staffed 14 to 16 hours per day in the summer. After hours, 911 is used to reach the rangers and park staff. (I dont know exactly what that means - maybe 911 calls go to the local Sheriff after hours). The Comm Center can reach all base stations in the Park, and most mobile units. Any Ranger Station that is near a paved road has a telephone.

Anyone have any confirmed freqs?

Apparently - in the summer time - they staff 1 or 2 wildland fire engines, perhaps 1 structural fire engine, perhaps 1 ambulance, and maybe 6 or 7 ranger stations.

Peter Sz

Eric,

I saw all the posts and all had great suggestions. If your shop
is linux based check out gnuradio, just do a google search. I'd
like to know how you are going to handle audio output to the individuals
tuning the rx's. Its something I'm interested in too. Also, are you
considering the ability for one person to tune multiple rx's and
then feed multiple streams of audio back? If so and you've got
an idea for a solution I'd really appreciate hearing that.

Let me know.
TIA

Do You Speak Digital?

Motorola launches Europe's first license-free digital Two-Way Radio
==========

HANNOVER,GERMANY
10th March 2006

In one of the most significant technology advances in two-way radios in years, Motorola today unveiled Europe's first digital licensed free two-way radios, the Motorola DTR2430T and the Motorola DTR2450T. The new additions to Motorola's portfolio take the entry level business two-way radio communications to a new level offering cellular-like features, combined with the ability to make both one-to-one and one-to-many calls, without the commitment of monthly fees or contracts.

The new digital radios are designed for use on-site and the new features help to expand the capabilities of both individuals and teams enabling them to improve efficiency and productivity through improved communication with functionality such as SMS and Call Forwarding. Other features, such as the Transmit ID, mean radios receiving calls will display the ID of the transmitting unit so people know instantly who needs to get hold of them.

The two radios are similar in features, but the DTR2450T is ideal for managers and decision makers as it offers the ability to monitor, manage and programme their teams' radios.

The innovative digital functions include:

*Enhanced Coverage - the new digital radios give superior in-building coverage, in comparison with analogue radios.

*Short Messaging Service - text messaging, with ten preset messages that users can change to suit their individual business needs.

*Scroll List - displaying frequently used group and individual IDs for easiest access.

*Long Battery Life - offering up to 20 hours of operation.
Digital Audio Quality - offering enhanced audio quality right up to the edge of coverage.

*Unique Radio ID - that gives cellular like functionality such as Caller ID, Call Forwarding, remote switch on / off, contact list.

*Digital One-to-one Calling - allowing someone to call and talk privately with a user's specific radio.

*Digital One-to-many Calling - enabling public group calls, meaning all other DTR SeriesT radios on the same group ID and channel hear communications, similar to analogue radio operation, and private group calls, meaning the DTR SeriesT radios can be programmed to communicate with specific sets or group members.

Designed for use in the many business environments where communication is the key to helping provide the best customer service, improving productivity or maintaining the safety of workers, the DTR SeriesT offers a powerful set of innovative and useful features.

Industries such as, education, retail, manufacturing, property management, hospitality and construction could all benefit from the digital performance of the Motorola DTR2430T and DTR2450T.

The radios also feature enhanced security, with the addition of Frequency Hopping Spread Spectrum (FHSS). The radios are also robust and meet US Military 810 C, D, E and F specifications and Motorola standards for durability and reliability. Users can rest-assured that the radios have been rigorously tested and will combat blowing rain, salt fog, blowing dust, constant vibration, shock and high and low temperature storage.

For pics and more join a new Yahoo-group that i have started today it's called:

"Digital 2-way radios"

The group discusses the new digital and license-free 2-way radios for use on PMR,LPD,FRS,GMRS,PAT,MURS,ISM frequency-bands:

Winamp/Oddcast/Icecast will do that nicely and free. One stream per
receiver (or two - one on each stereo channel).

Hi Everyone,

I am a non-advanced user of licensed commercial VHF handhelds for a large national charity.

We have a need to communicate between two sites. For various reasons that I can't easilly explain in text I need to be able to put an ariel on the roof and connect it to the handset in the building (there is a large grass bank outside both buildings, but the roof <--> roof is line of sight and works well.

I spoke to someone over the weekend who told me that it was easy to do - all I need apparantly is an ariel (identical to the ones that people have on their cars), cut to the appropriate length for my frequencies and then some standard TV cable to connect the ariel to my handheld.

Naturally, I have some questions
1) Where do I get adapters to plug one end of my TV cable into my IKOM F-15 ariel socket?
2) Where do I buy the ariel? How do I calcualte the length that I should cut it down to?
3) What sort of end do I need on the other end of my TV cable to plug that into the ariel, or is this a solder job?

If anyone can help me with any of these or if you have any advice or suggestions they would be greatly appreciated!

Many thanks,

Alex Davies

PS - this is a double post of http://groups.google.com/group/alt.radio.scanner/browse_thread/thread/3793b25bbc21c85b. |t only told me after posting that this newsgroup was old and that I should post here - sorry!

Alex, the Icom F-15 appears to use the standard BNC connector to mount the factory-supplied "rubber duck" antenna to the radio.

The appropriate BNC connectors to use for connecting coaxial cable to one of these radios for the purpose of connecting it to an external antenna are widely available. They can be purchased at any RadioShack store.

You do NOT want to use TV cable to connect the radio to the antenna, as TV cable has a 75-ohm impedance and these radios work at 50 ohm impedance. What you want to use instead is a good quality 50-ohm coaxial cable such as RG-213, LMR400, or Belden 9913. These can usually be purchased directly from manufacturers and

radio dealers.

As far as the antennas themselves are concerned, some technical knowledge is needed to select, assemble, and tune a communications antenna for best performance. Test equipment such as an antenna analyzer or, at the very least, an SWR bridge is needed to properly do the job. This can be handled by any local commercial firm that deals with communications equipment (the dealer where you purchased the Icom F-15 radios might be a good starting point). Alternatively, since you are a charitable orhanization, you might wish to seek assistance from a local Amateur Radio (ham radio) club or emergency communications group such as the ARES/RACES in your area. Ham operators frequently donate their time and knowledge to assist charitable organizations with their events, and they have the necessary expertise and equipment and experience to easily accomplish what you want to do.

In short, what you want to do *is* easy - for someone who knows what they're doing. However, for someone with no technical experience in setting up antennas, it isn't as easy as it might initially seem. Do some looking around in your area and get some hands-on help from some local hams, that would be your best bet. They're smart enough to know how to avoid the pitfalls that go along with a project of this nature.

Hope this helps,

Yes, I have one that I use with my portable FT817. it qworks great and I
would recommend buying one anytime

No problem for the IC20 just turn for maximum noise.

Dear John,

Thank-you very much for your detailed reply.

Would the following kit be OK?
http://www.maplin.co.uk/Module.aspx?TabID=1&DOY=search&ModuleNo=20661&criteria=
(or
http://cgi.ebay.co.uk/RG-58-50-Ohm-Coax-cable-100m-Drum_W0QQitemZ5858629647QQcategoryZ4870
4QQtcZphotoQQcmdZViewItem)
http://www.maplin.co.uk/module.aspx?ModuleNo=1567&doy=14m3&QV=P
http://www.maplin.co.uk/module.aspx?ModuleNo=32886&doy=14m3&QV=P
http://www.maplin.co.uk/Search.aspx?criteria=YW04E&DOY=14m3

I notice that the ariel has a "PL259 plug fitted" ("Right-Angled UHF
Plug"). This looks fairly similar to what is actually on my radio - can
I just ask if you are sure the F-15 has a BCN connector [I can't find
the technical specs that tell me what it is, and I don't know the
difference!]

BTW it was a local radio enthusiast that I asked (member of RAYNET) but
I failed to get his contact details (it was a 2 minute conversation, in
between us both having to run to an emergency!).

Many thanks for all your help,

Alex

I just picked up the new Uniden BC898T this weekend it will do
everything you want except for
Alphanumeric display. It uses standard 9pin serial cable to connect to
the PC, it also has the
new 6.5KHZ freq step that commercial radios will be using. I have a
Cushman service monitor
to check HT & mobile rigs but needed something to decode DCS & CTCSS
tones & the 898
really does a good job, it will display which type of tone and tone
frequency on even the weakest signals, it also does all 3 types of
trunking and alot of other features and theres free
softwae out there for it.

That Maplin site apparently (and hopefully, for your sake!) works better in the UK than it does here in the USA. I was only able to get one of the four pages you linked to loaded from here - the first one, showing the RG-213 coaxial cable. This would probably be okay for a *very* short run, a few feet at best. I'd recommend thicker and less lossy cable for anything longer than that.

It's difficult to be very specific from a few thousand miles away, but in general: The longer the coaxial cable is, the more loss of signal will occur between the radio and the antenna (aerial). This is why I recommended getting in touch with some local hams - they can show up at your site and see the actaul situation you're dealing with, and then tell you exactly what you need to avoid having excessive feedline loss. I can't do that from here. Different grades of cable have different amounts of loss. That one lonk looks like it's to RG-58U, so I'll use that as an example - RG-58U would be fine on HF. On VHF, it's almost certainly going to be very lossy unless your antenna is ten feet from the radio.

>I notice that the ariel has a "PL259 plug fitted" ("Right-Angled UHF
>Plug"). This looks fairly similar to what is actually on my radio - can
>I just ask if you are sure the F-15 has a BCN connector [I can't find
>the technical specs that tell me what it is, and I don't know the
>difference!]

This one I can answer. The PL259 (and the female SO239 that mates with it) thread together, you insert the PL259 into the SO239 and then turn the outer sleeve on the PL259 several turns to tighten it on. With BNC connectors, you push it in and give it about half a turn, and it's on. I looked at a picture of the F-15 and it appeared to me to be a BNC, but in any event, if you have to screw the thing on there it's probably a PL259, if a half-turn locks it in place it's probably a BNC.

>BTW it was a local radio enthusiast that I asked (member of RAYNET) but
>I failed to get his contact details (it was a 2 minute conversation, in
>between us both having to run to an emergency!).

OK, RAYNET is comparable to ARES here in the US. You might wish to visit the following web page, find a RAYNET team in your area, and contact them for some hands (and eyes)-on assistance. Any ham looking at your situation first hand can give you a much better estimation of what's best for your particular situation than I could possibly give you from here. :-)

Dear John,

Thank-you so much for your detailed reply.

The current areial is indeed a screw fit rather than twist which is good news because it reduces the number of connectors!

Does the "military" grade version of the cable, http://www.maplin.co.uk/module.aspx?ModuleNo=19368&doy=14m3&QV=P#faq work any better? I can't see if the only difference is that the outer sheath is tougher or if this actually means that the cable is less lossy. I reckon that its going to be a maximum of 20ft from handset to the aerial.

I'll drop the RAYNET guys an email. Once again, many thanks for your help. I'll certainly post here if I end up doing this with any advice for anyone else that might find this post!

Many thanks,

Alex

<http://www.webdingers.com/scanner.html>

Download them and play with them. They're really all fairly simple to
set up. Ask here (or on the relevant forums for each program) if you
have any problems.

I have a problem with a radio shack PRO99 scanner that I use for
Nascar races. The only problem is after the channels are programmed
it will not scan the channels. It stays on whatever channel you have
up. I have tried everything i can think of to let it scan but no luck
Anyone have any suggestions?

Not familiar with that particular scanner but I've seen some that can
either scan for busy or free channels - is yours in the wrong mode?

Cheers.

Ken

Don't be offended, I'm trying to eliminate possibilities, but have you
followed the steps in the user manual (p.34)? Are you sure the bank
you've used for programming channels isn't locked out?

Cheers.

873. Pro-89 scanner-PC cable help

Newsgroup: rec.radio.scanner
Date: 2006-03-16 14:16:06 UTC
From: "Joe S." <anon@mous.com>
Message-ID: <gKednWciUdWP7oTZnZ2dneKdnZydnZ2d@comcast.com>
Source record: 9753

I purchased a Pro-89 off eBay and downloaded the software to program the scanner with my PC. However, I do not have the scanner-PC cable -- as I recall, the cable has a DB-9 serial connector on one end and a two-connector 3.5mm plug on the other.

Does anyone have one that you would sell, or, can anyone point me to a schematic so I can build my own?

I'm trying to find a schematic through Google without much luck. Thanks.

Message-ID: <oGoSf.7194$2n3.105495@wagner.videotron.net>
Source record: 9759

Hi everybody.

I just finished posting 3 vintage scanners that belonged to my dad.

He recently passed away and I have no used for them since I don't share the interest in this activity. The only thing I know is that it's quite addictive!

here are the links to 3 models. All starting at 0.01$ with fixed (decent) shipping rates of 15$ and 20$ each.

I don't really care if I make any money off of these, I only want them to find a good home with somebody that will take care of them like my father did.

Regards,

Jean-Guy.

Source record: 9764

I have a PRO-2006 base scanner and I posted a while back ago that my scanner was making this really sqelch-like noise and making this chainsaw like noise...Now I know what the problem is..

I listen to my local police dept. and their frequencies are ANALOG-TRUNKED...But, when they switch to a frequency that is ENCRYPTED, it makes that horrible noise even with the sqelch knob turned all the way down...

In other words, so whenever they switch or transmit on a encrypted frequency, It makes that noise..

So, is there like a decrypter software that I can download into my scanner to prevent this from happening? If so...how??

Thanks

No, nothing is missing. Communication is one way, PC to radio. The radio has a level shifter circuit built in. Other radios with the same setup are the PRO-64, 76, 79, 82, 2016, 2017, and 2041. There are no Starrsoft programs for any of these radios and the cable mentioned on their website is not appropriate for these radios.

No, There is no software or scanner that will help you with encrypted
frequencies, also it would be cost prohibiting and illegal to listen to
encrypted signals, also you would need the encryption key to un-encrypt the
communications.

K1MAN EDITORIAL - ED060316A -

K3VR IS A HYPOCRITE

Old Brian holds himself out to be an A-1 amateur radio operator. But his reaction to a legitimate complaint* regarding criminal amateur radio interference by, for example, KZ8O (former ND8V), is not outrage against KZ8O but rather outrage against the station interfered with, K1MAN. Interesting! Brian has just totally destroyed his claimed amateur radio credibility.

Brian is a staunch supporter of ARRL. KZ8O is a staunch supporter of ARRL. ARRL is silent on this issue. The FCC, so far, is silent on this issue. Do you see a pattern here? Interesting!

It looks like Brian is not much of a ham after all. He is more interested in "nailing" K1MAN for something, anything, rather than FCC rules or United States law. Or, Brian is just plain stupid!

Brian is not THAT stupid. He is simply acting like a spoiled kid in kindergarten. His juvenile emotions simply over ride his adult intelligence; often seen with kids in school. Get a grip, Brian! You usually make a total fool of yourself. ARRL and the FCC are not very far behind!

73 and GL de K1MAN

Glenn A. Baxter, P.E., K1MAN
Registered Professional Engineer
Licensee of Amateur Radio Station K1MAN

against

Michael E. Guernsey, Sr.
Licensee of Amateur Radio Station KZ8O

Complainant, Glenn A. Baxter, P.E., K1MAN, hereby makes this affidavit from his own personal knowledge and says that:

Complainant began his amateur information bulletin service at 1400 UTC on the clear frequency, 14.275 MHz., on 13 March 2006. On or before 1544 UTC, amateur radio operator Michael E. Guernsey, Sr., KZ8O, caused intentional interference to amateur radio station K1MAN in criminal violation of federal law, namely Sections 333 and 501 of the 1934 Communications Act:

Section 333:

No person shall willfully or maliciously interfere with or cause interference to any radiocommunications or any station licensed or authorized by or under this act or operated by the United States government.

Section 501:

Any person who willfully and knowingly does or causes or suffers to be done any act, matter or thing, in this Act prohibited or declared to be unlawful, or who willfully or knowingly omits or fails to do any act, matter or thing in this Act required to be done, or willfully or knowingly causes or suffers such omission or failure, shall, upon conviction thereof, be punished for such offense, for which no penalty (other than a forfeiture) is provided by this Act, by a fine of not more than $10,000 or by imprisonment for a term not exceeding two years or both.

At 1546 UTC K1MAN changed transmitting frequency to 14.272 MHz. to get
away from this criminal radio interference.

And was this "information bulletin" one of the following?:

o ARNewsline
o the Rain Report
o the HandiHam newsletter
o the ARRL letter
o This Week in Amateur Radio

If it wasn't, it was probably another one of Glenn's self-aggrandizing broadcasts.
As you know, one-way broadcasts are verboten on amateur radio. (Sec. 97.113(3)(5b))

No where in the FCC rules does it state that an Information bulletin
has to be a newscast. All those you mentioned are newscast. The rules
only state it has to be "solely of subject matter of interest to the
amateur radio service" (see below)

97.3 Definitions
(a) The definitions of terms used in Part 97 are:

(25) Information bulletin. A message directed only to amateur operators
consisting solely of subject matter of direct interest to the amateur
service.

§97.111 Authorized transmissions.

(b) In addition to one-way transmissions specifically authorized
elsewhere in this Part, an amateur station may transmit the following
types of one-way communications:

(6) Transmissions necessary to disseminate information bulletins;

It's funny that people only read 97.113 and not the rest of the rules
including the definition

(10) Broadcasting. Transmissions intended for reception by the general
public, either direct or relayed.

If the transmission is directed to the general public it's a broadcast,
if it's directed to the amateur service and consist solely of subject

matter of a direct interest to the amateur radio service then it's legal.

Besides, the encryption is done on the fly for each transmission by the
transmitter system so there is little if any chance of de-encryption by
normal human means.

"solely of subject matter interest to the amateur radio service."
Broadcasts of, by, about, from, and to K1MAN are of no interest to anyone
but K1MAN.

These so called "FORMAL FELONY COMPLAINTs" are totally bogus!
K1MAN has no authority to so.
Read what the FCC had to say about this back in 2001:
December 11, 2001

Mr. Glenn A. Baxter
RR 1 Box 776
Belgrade Lakes, ME 04918

RE: Warning Notice--Amateur Radio license K1MAN
Dear Mr. Baxter:

The Commission has information that you have sent numerous so-called "Standard Felony Complaint Affidavits" to various Amateur Radio licensees that you perceive to either cause interference to your Amateur Radio station K1MAN or do not relinquish to you the frequency on which they are operating. Inasmuch as you have successfully completed an examination for an Amateur Radio license, you should be aware that all Amateur frequencies are shared. You have no greater rights whatsoever to an Amateur Radio frequency than any other Amateur Radio operator.

We also note that on January 5, 1994, the United States Attorney for your jurisdiction, Jay P. McCloskey, warned you about the mailing of such "Standard Felony Complaint Affidavits" and stated:

DO NOT send any more Standard Felony Complaint Affidavits to our office. The interference you allege, even if intentional, is not a federal criminal offense over which our office has prosecutorial jurisdiction.
The letter from United States Attorney McCloskey also referenced letters that you had sent other Amateur operators alerting them of supposed criminal charges instituted by McCloskey's office. In his letter to you, McCloskey stated:

It is against the law to write and mail this type of threatening communication, especially when it has no basis in fact. If you continue sending this type of letter, you may be subject to federal criminal charges for misrepresentation and for using the mails to make threats. You may also jeopardize your Amateur license.

You are advised that any attempts to threaten or intimidate Amateur Radio licensees operating on the Amateur bands will reflect adversely upon your qualifications to remain a Commission licensee, and will be the subject of a license revocation or renewal hearing.

This update fixes a couple bugs and adds 2 NEW Options:

Feb 27,2006 - Fixed: Setting Reverse Polarity while Trunking.
Mar 01,2006 - -----: Increased Max Radios Again...
Mar 05,2006 - Fixed: Private Calls in MOTO Display and Resume.
Mar 06,2006 - Added: 2nd Receiver Option.
Mar 06,2006 - Added: Priority Calls (only using 2nd Receiver Option).
Mar 07,2006 - -----: Modified "Hunt on Dataloss" Again...
Mar 08,2006 - -----: PCR-1500 Firmware Code Now Recogonized.
Mar 08,2006 - -----: Trunking Resumes Now when TrunkBank Right-Clicked
(Move to TrunkBank).
Mar 08,2006 - -----: Trunking Resumes Now when TrunkBank Left-Clicked
(TrunkBank De-Activated).
Mar 09,2006 - -----: Trunking Resumes Now if a Group is set as
Locked-Out.
Mar 15,2006 - Fixed: COM Ports higher than 9 Now usable on XP.
Mar 16,2006 - Fixed: Trunking Banks now Disabled for Conventional Scan if
previously set.

Version 0.7.187 Released 03/17/2006

1) Second (Dual) Receiver Option.
For this option to work, you need to have a second receiver with a
discriminator tap.
With the cable you had plugged in the Packet Connector on the PCR,
plug it now into the "Discriminator Out" connector on this radio.
(You may have to change the Reverse Polarity in Trunk Settings for it to
decode)

2) Group Priority Levels.
This option will only work if the Second Receiver Option is used...
You can now program a priority level for each individual Group ID.
The Highest Priority is 1 and the Lowest is 99, Default set to 50.
Emergency Calls are designated Priorty 1, Private Calls is set to 2...

3) Minimum Support for the PC/R-1500 at this time...

A new version of APRSPoint is released, new features include,

1. Implemented APRS server filter setting,
2. Enabled auto connect for TCP connection,
3. Customization of track line width and style,

and numerous other fixes and enhancements. Please visit
http://www.aprspoint.com for details on this new release and sale.
Thanks.

Allen, I had a PRO-96 that had the *exact* same problem... I'm not
sure how similar it is to the PRO-97, so the following may or may not
be of any use... but might be worth a try, or may give you some
ideas...

Have a look at the picture at:
http://www.ninemoons.com/~daf/images/PRO-96.jpg

After trying all the obvious stuff, I found that very gently pushing down on the edge of the circuit board (with a non-metallic object :-) in the area outlined in red that the volome would increase tremendously. It was quite touchy, and seemed to be fairly localized to that general area. Volume would always return to it's previously "barely audible" state when pressure was released. I suspected a micro-crack in a solder joint or possibly one of the "plated-through" holes. A "cold" solder joint was another possibility...

I removed the board and inspected both sides very carefully in that area with the highest power magnifier I had on hand (an eyepiece from a microscope...:-) Visual inspection didn't reveal anything, so I put the board back in and tried it again with the exact same results. This went on about 4 times until I finally got disgusted and drug out my trusty soldering iron!

Having done a lot of bench work, I have a soldering iron with a tip about the size of a ball-point pin. I wouldn't recommend doing this with anything bigger, as it is very easy to overheat these SMT components.

Using some high power reading glasses, I very briefly heated each of the solder joints "to melting" in the general area outlined in red, using no extra solder. (Very easy to use too much on these tiny pads!)

I did add very minute amounts of solder to some of the plated-through holes until I could tell from both sides they were "soldered-through"

After putting things back together - VOILA! Normal sound levels!

The final test was when I could get no changes in the (now normal) volume by pushing down in area that had been so touchy before.

Hope this helps...

-Dan

912. RS Pro-83 White noise problem

Newsgroup: rec.radio.scanner
Date: 2006-03-18 11:56:04 UTC
From: scott@mit.edu
Message-ID: <441bf554$0$563$b45e6eb0@senator-bedfellow.mit.edu>
Source record: 9792

I have had a Pro-83 since last Summer (2005) and really like it. It usually lives in the car when I am driving, and is subject to New England's seasons.

Over the summer, it behaved fine.

This winter, though, even though the season has been rather mild, the radio has started to act like the squelch is open full time, with constant white noise. The scanner function properly continues to search for active frequencies as does the signal stalker. If the squelch was open, the scanner and signal stalker functions would obviously be sitting on a frequency and not move.

I've tried playing with both the squelch and volume knobs, but no change from squelch, though the volume does help "squelch" some of the headache I can start to develop.

This white noise problem occurs regardless of whether I use rechargable batteries or the DC adapter, and regardless of use of the radio in the house or in the car.

The white noise has been known to subside after some time. But I ask readers if they have also experienced this? If so, what could be causing it? It is NOT automobile interference because the scanner does come into the house at times and present the same problem. It would be difficult to believe it is squelch since the rest of the functions behave as if the squelch _is_ working properly.

What else could I be missing? Has the radio become defective? It was purchased new, out of the box.

Thanks for any ideas/leads/hints.

Scott

913. decoders

Newsgroup: rec.radio.scanner

I'm looking for some fundamentals on writing software decoders
for signals. I've found alot of things for windows (scancat,mmtty
etc) however not alot for linux. So since I use linux I'd like
to get a discussion going on writing some command line decoders
that will take the input from my soundcard and output the characters
for something like ACARS, TTY etc.

Any help would be great
TIA

The squelch output (DC that gets higher as the detected noise gets higher) feeds 2 points - the computer, so it knows whether to scan or stop and an audio gate that cuts off the audio when there's no signal. It sounds as if either the audio gate is allowing signal through regardless of the state of the squelch output, or the squelch output isn't getting to the audio gate. How you can check that out without a schematic (RS schematics of recent products are rare) is the tough question.

Grab an old TTY decoder program and you'll see how it's done ...
pretty trivial, really. The rough part (for me, at least, since I've
never tried it) is getting the sound card to tell you which frequency
it's hearing. But once you have the digital train decoding ASCII is
no job at all (0100 0001 is upper case A - no "decoding" needed), and
decoding Baudot isn't much more complicated (keep the current shift
state in a boolean and look up the character in a table).

If one person continues to listen to his program, then it's an interest to someone in the amateur radio service. There is no real specification on how many people are require to listen to an information bulletin to deem it "an interest to the amateur radio service" and the courts would tell youhe samething. If even one person listens to it, it's an interest to someone in the service.

You mean without the schematic? Experience and luck.

Start at the squelch control. Measure the top (clockwise end) with signal and with no signal. You should have either an increase in noise or an increase in DC with no signal. Follow the signal and see if it gets to the audio stages as a DC voltage. See if that voltage, when there's no signal, cuts off an audio stage. Somewhere along the line, you won't see what you expect. Open resistor? Shorted capacitor?

Source record: 9714

Are there any handheld scanners that do this? I'd like to be able to set a priority channel for our baby monitor, but I want much tighter squelch on it than when I'm doing general scanning (such that priority channel breaks squelch only when there's voice present, for example).

Thanks,

I have a 2002 F-150 SuperCrew in great shape. Price is $125,000, and
I'll deliver it FREE anywhere in the continental United States. :)

Seriously, what do you actually want for the radio?

Most of what I was thinking of was written in 8080 assembly. :) I doubt that I could find my old 8" floppies or, even if I could, if I could find anything that could read them.

But here's the program in English - translate it to whatever language you need:

For ASCII, input the bits, starting with the start bit. Keep the next 8 bits. Assemble them into a byte. You're done - that's the character.

Oh, there's a stop bit - either use it as a verification bit - if it's missing, skip the character because something's wrong - or throw it away.

You can find a bit-banger routine here: <http://www.ganssle.com/articles/auart.htm> - look at Cin. BITTIM and HALFBT are only needed if you don't have a timer with fine granularity - a few microseconds would be good.

For Baudot (or Gray or Murray code), it's 5 bits (and the first bit is 1-1/2 bit times or 2 bit times long - depending on whose Teletype machine is transmitting - Teletype corporation made them both ways, depending on the customer - so you might want to give the user the choice of 1-1/2 or 2 stop bits). Grab the next *5* bits, assemble them into a right-justified byte (the left 3 bits are 0) (stop bit here too - same as for ASCII) - the bit banger will work here too - look to see if you're in Figs or Ltrs and look it up in the appropriate table. If it's all 5 bits (31), it's Ltrs, so set your shift indicator to Ltrs. If it's Figs (27) set your shift indicator to Figs. (Ltrs and Figs are transmitted characters.) Give the user the choice of "Unshift on space". If it's chosen, and the character is a space (4), convert to 32 (ASCII for space) and set the shift indicator for Ltrs. If not, just convert to 32.

You can find the entire Baudot chart at <http://home.austin.rr.com/kinghome/signpage/baudot.html>.

Oh - if you're in Ltrs shift and receive Ltrs, that's normal. Old TTY operators would "diddle" the Ltrs key, to let you know that they were

thinking of what to say. Those of us who used real Teletype machines back in prehistoric times still do that. And, when using paper tape, punching Ltrs erased any error, so if someone is transmitting an old tape, you could get a string of Ltrs..

Now, as far as what happens between the Line In jack and the program, you're on your own - I've never done sound card programming.

Squelch has nothing to do with voice - it's based on carrier level. No
matter how tight you set the squelch, you'll have one of two
conditions - either the scanner stops at the frequency every scan or
it never stops at it, depending on the signal strength needed to open
that squelch setting and the strength of the monitor signal.

You want a baby monitor transmitter with VOX - it only transmits if
there's voice (or other noise). That's probably something you'd have
to do yourself - modify an existing monitor transmitter.

Thanks Dan,

I have since got a pro2051 with missing speaker and ribbon cables and
which I since managed to revive. My wife has since kidnapped the 2051 and
this gives me some incentive to return to the PRO 97 project. Thanks for the
tidbit of NFO and I will report back if things get
better. FYI...I have already changed out 2 caps with the
same capacitance but with a slightly higher volt rating. I
was about to vye for a replacement pot. (squelch/vol)
Your solution does sound compelling...I'll investigate.

Thanks again and regards,

Allen

How about if I pay you $3900 for the 64 and then you can buy the
scanner. I really want the 64, so it's a win-win situation.

Depends if they went digital like they did in the north metro. Otherwise any
truncktracker should work.

Oh, by the way. I also have a tape drive for the Commodore. I'll
let it go for $6400. This is well under it's true value but I
consider you a friend. Hey, what are friends for? ;-)

I couldn't go a penny under $9000 for the tape drive and the 64, but
I'll need you to buy my truck at the same time. Super discount price
for a friend, though, at $109,995. Also have a 2000 sq. ft.
single-story 4-bedroom brick home for sale, 5 years old. It's listed at
$924,000, but you get the friend price of $849,000. PayPal, money
order, cashier's checks accepted; personal checks accepted but must
clear first.

You're welcome. Just doing a friend a favor.

here is a wierd thing to try....it just came to me
(mostly because it happened to me on a portable radio)
I live in the damp state of WA and I use to leave a radio on the seat
24/7... I started getting a hissing noise that I couldn't get rid of
and being a tad electronicly minded I took it appart to see if I could
find the problem.

Finally did (after 2 hrs) a bit of moisture had condensed inside the
radio and had caused a bit of short to one of the traces leading to the
speaker..after the moisture had departed (evaportated) it had left
minute trace of some mineral that allowed current to flow causing the hiss

After I dug out my isopropal alcohol and cleaned it up a bit (solder
traces and joints and board alll nice and clean again) the noise stopped

I don't know if that would be your problem but in a "mild" New England
weather I would expect instead of lots of very cold.. a lot of moisture
instead. With the posiblity of dust inside the unit (impossible to
avoid even in 'sealed' units it could happen

don't know if it is likely.. but ever since I had a similar problem
I always check for the simple solutions first before breaking out test
equipment

Again.....just a thot

Last night at about 8 pm pst I was scanning using the "signal Stalker"
feature on my pro 97 handheld scanner and picked up what sounded like
an automated voice on several FRS channels. I wasent aware of any
automated services on FRS/GMRS. DOes anyone know what this would be? It

kept repeating, "Alpha Sierra Papa" and then the frequency.

Reno/Sparks area, Nevada.

Considering how cutthroat F1 racing is, I would say that no team is
about to take the risk of having a clear frequency available for other
teams to listen.
(Supposedly, teams have been scrambling communications since 1998,
after an incident in Spain in 1997 involving Williams and Ferrari.)

Probably heard on channels 15-22 right?

GMRS is a license-required service that permits repeater operation.
Automated systems will sometimes give the call sign of the system. In this
case it sounds more like some sort of test beacon. "Beacon" transmissions
on GMRS are forbidden by regulations, as this violates the "not for
exclusive use" provisions of the regulations.

More GMRS info here:
http://www.geocities.com/gmrspage/

967. Pro-96 no longer for sale at Radio Shack?

Newsgroup: rec.radio.scanner
Date: 2006-03-23 08:47:16 UTC
From: Dan <noemail@forspambots.com>
Message-ID: <4on422dvga9fbf5gkbguajhi973q7s09bq@4ax.com>
Source record: 9747

I just noticed the Pro-96 is no longer available on the radioshack.com website, even though the 2096 is still listed. (I don't visit the website often, so have no idea how long it has been gone.)

Anybody know why it is no longer listed? I thought it was advertised as their "flagship" scanner. (At least the price certainly reflected that!)

Does it have some problems as I've seen a few others in the NG suggest? Hard to believe that it would be "obsoleted" yet...

-Dan

PC scanning combo , both in EXCELLENT condition.

Pro-2042 with the Opto 535 installed.

Samsung Sens 690 Laptop. Win XP , Probe , Scancat Gold "SE" , etc.

I am asking $700/BO or possibly trades and cash.

also have a UBC 780xlt in EXCELLENT condition (Both US and European BANDPLANS) $350 / BO Might consider trades , depends.

Alpha Numeric a must and pc control on any trades considered.

Thanks for looking , Tom (aka ScanDaBands on Radio Reference and Stong Signals)

Hi, my name is Kitty. Well, close enough. I live in Edwardsville, KS, and I deliver for Domino's Pizza in Mission, KS. My goal in life is to be raped. I tried to accomplish this awhile back, when I worked at another fast food restaurant in Olathe, but then I got scared and quit posting. But now I've realized that although I may actually be 26 years old, my childish mindset and baby doll looks are what I'm really all about. I was born to be someone's innocent victim. To be their adorable little submissive, broken to their will, and willing to do anything to survive the encounter. I crave power and domination. I always fall in love with my bosses, just because of thier power over me. I have an absolute obsession for police. They are so sexy and all-powerful, like mini-gods over my life. When a cop lets me go for even a small infraction, I usually have to pull over again, because I'm cumming in my panties. Anyway, if any of this interests you, email me or post here. I just want to meet as many would be attackers as possible. Roleplaying is good, but if you don't want to post here at all I understand, and hope it's because you're planning to find and rape me in person, and don't want to leave an evidence trail behind. Look forward to hearing from or feeling you... :)
Luv,
Kitty

I've seen a few posts regarding choppy or garbled audio reception with
the PRO-96. A Google web search of "Pro-96 garbled audio" brings up a
few hits as well. Explanations I have seen:

1. Problems with scanner
2. Encrypted audio (but not being detected as such)
3. Poor signal
4. Faulty/Buggy transmission network (doesn't seem likely as I would
think the PD department would be all over this in a heartbeat...)

I was just wondering if they *actually* did find some issue with the
PRO-96 since it seems to have vanished from the website...

Actually, there are rules against repeaters on FRS. That and the fact
there are no input frequencies allotted to the frequencies you mention.
The repeater pairs are assigned in the frequencies farther down,.... 15-22
on the "bubblepacks".

Digital audio will almost never be as clear as analog audio. I say
"almost" because a good technician, given the proper equipment and
enough time, can make a current Motorola digital transmitter sound
hi-fi. But if you drop a few bits of signal, ant there was a change
of audio during those bits, you'll hear garble. Garble is digital's
"noise burst" or "picket fence". Make sure you never drop a bit, and
use 100 KHz bandwidth, and all digital will sound better than analog.

To Al: You're closer to the truth than anyone so far...all the guys I know just want to love me and spoil me because I'm pretty and sweet. None of them want to rape or hurt me. Which sucks for me, and my fantasy. I mean I'm sure I could talk one of them into doing it, if they knew how much it meant to me, but then it would be consensual. The second I give a guy permission to do anything, I've just spoiled my fantasy. The only thing worse would be a safe word. I know that noone will probably ever understand any of this.

You obviously have worn this nym out in what must be record time, after spamming 2 dozen plus groups on the same day with your "rape fantasy".
My suggestion - Get yourself a less obviously goofy nym, then prowl the sex groups with your particular perversions, warm up to the subject don't just say "RAPE ME PLEASE" how stupid sheesh.
If you are an attractive female and live in KC, how fuckin hard could it be to get raped if ya really wanted to ?

She's a bit over the top, but you'd have to be totally unaware of the
lifestyle to not understand her viewpoint. Her only problem is
safety, not viewpoint.

Oh, there are MANY women who feel as she does, so I don't think it's
totally (or even mostly) made up.

As far as "good"? If she's good sub material, there's something
pretty great for some Dom. Now that may not be your taste, but don't
assume that everyone is you.

Ever hear a new Motorola digital radio? I'd guess there's some ECC or FEC in there.

Of course they don't cost $400, and they don't scan 30-2000 MHz, or 1000 channels, but they sound better than analog if the system is set up properly.

Then, again, why doesn't your cell phone have FEC? Same reason? Only 1 channel effectively, and some of them are pretty expensive when they first come out.

FEC would be fine but there's always a tradeoff between bandwidth, power
and price.

Cheers.

Not that uncommon to hear Spanish and especially Brazilian pirates on US UHF SATCOM birds. Many of the Spanish stations sound like local chit chat and they may not be intending to go through a satellite. The Brazilians are definitely Pirates and use the satellites like a big CB repeater. A guy in Brentwood, CA with a Portuguese surname name was recently busted for unlicensed operation and the frequency range listed by the FCC was in the UHF Satcom range. I would like to find out if this guy was connected with the Brazilian Pirates that have been plaguing the system for years. I have picked up McMurdo Station conversing with a supply aircraft via UHF SATCOM with my PRO-43 and stock rubber duck, so there is no reason to believe you did not pick up a UHF satellite. The new UHF follow on satellites have a pretty hot downlink.

Interesting reply from R/S... and while I don't deny that it certainly
is "plausible", it seems a bit fishy... and I know all too well how
the world of PR works.

Why actually "pull" the item from the website? Why not simply show it
as "Out of Stock"? (As they currently do for the Pro-2096)

The Brazilians have mentioned the satellite in their conversation and
often complain about their equipment to one of the persons in the group.
Sounds like he supplies them with equipment or knowledge. Brazil has a
severe telephone and communications problem and they grab and use any
radio and frequency they can. Illegal operation is rampant in the big
cities. Using a US satellite is just another opportunity to communicate
over their country or even to friends in the US. Other foreign
conversations I have heard seem to be unaware of the satellite and are
probably using the satellite uplink frequency as simplex in their
country. You can easily (and unknowingly) hit the UHF satellites with a
moderate power mobile or base radio and whip antenna, especially if the
satellite is low to the horizon.

Well, I really don't need a fetish lecture. I'm aware of them, and believe
me I know very well how kinky some females can be.
Suffice it to say not many, if any, legit females would spam 2 dozen groups
on the same day trying to legititmatly fullfill their fantasy.
Surely her Dominos pizza delivery earnings would allow her a one month
account on adult freind finder, and would be much more productive than
random usenet spammings.
Your stretching it just assuming the she is really a she, for starters.
Remotely possible, but highly unlikely.

Aw come on - give the poor clerks a break - if they make minimum wage they are doing good.

Don't expect a $50/hour engineering response from a $5.15/hour clerk

Some of the stores here have college kids trying to get thru school. Some are interested in the merchandise and learn quickly -- others do not. Be polite and educate the clerks in a nice way if you are indeed knowledgeable yourself.

Radio Shack is a good place to buy things if you have done your homework and know what you want.

Some stores here have VERY knowledgeable clerks -- just do a little asking around and go there.

--
CL -- I doubt, therefore I might be !

I bought my Pro-96 in a downtown Chicago RadioShack store - very helpful
clerks. They didn't have the beast in the store when I was to be in town
so one of the guys picked one up from another store on his way home and
had it for me in his store next day. Great service!

Cheers.

Ken

Unfortunately, that's about the average intelligence level of the
average American. Today's minimum wage employees can't count change. If
you're lucky, you'll get one that's reasonably conversant in English.
(But their Spanish is muy bueno, amigo!) If you pay $2/hr more, you'll
get somebody who has a worthless college degree and who can write a
research paper just fine if you allow them to look one up on the
internet. Is it any wonder why employers are looking to China and India?
The average Chinese is better educated than the average American!

Icom R-7000 Police/Fire Radio Scanner Package - $800

---

(1) r-7000 in good shape- cost about $1400.00 new, FULL COVERAGE 25 MHz thru 2000 MHz. I sent it back to icom and had it re- aliened to factory specs. I have the receipt for this. manual , original box, service manual ($30.00) new.

(2) rc-12 for ic r-7000, icom remote controller , board is installed in radio, in original box , manual, just like new. cost ($129.00) new.

(3) TV-r7000 icom TV/fm receive adapter, new, never installed, in original box, manual cost ($249.00) "this item is very hard to find."

(4) ct-17 icom communication interface- v (ci-v) level converter. original box, manual, good shape , works great, cost (129.00) new this device can control 4 icom radios.

I have this radio up and running now.

I would like to sell this all in one package.

$800.00 Firm.

a.. this is in or around Port Clinton, Ohio

Patrick AFB Area Log - Mon, 27 Mar 2006

In addition to Military flights we heard comms most of the day from the Central Florida News Helos flying near the wildfires around the area.
Also the BLADEs landed on Rnwy 02 after coming right overhead my house. The sound was overwhelming. . .boiling, swirling air rushing and screaming. . . I was beside myself and could hardly control the camera.

AIR TRANSPORT 530: DC-8, USAF Contractor
8:45am: Arrives Patrick AFB.
12:40pm: Departs to Antigua (downrange Eastern Test Range site).
[133.75, 132.65, 132.25]

BOLT 11: KC-135R, MacDill AFB 6AMW
9:05am: "Off the ground at 1400z."
1:28pm: Inbound MacDill AFB w 47K fuel.
[311.0 Lightning Ops]

CUTLASS (?) 01 [Unsure of c/s; did not sound like T-37]
9:05am: En route to Eglin AFB.
[293.225, 349.0, 319.0, 285.5, 346.25, 360.7]

FOXY 92: T-38A, Flight of 2, Sheppard AFB 80FTW
10:01am: En route to Tyndall AFB.
[285.5, 269.25, 360.7]

NASA 903: T-38N #63-8200, Johnson Space Ctr, Houston.
10:10am: Lands at Shuttle Landing Facility
[124.8, 132.65, 128.55]

LIMA LIMA 39: P-3C Jacksonville NAS VP-30 "Pro's Nest" Sqdn
10:10am: Touch-and-goes at Patrick AFB; RTB NAS Jax.
[133.75]

JOSA 628: C-21A #84-0125
10:35am: Inbd MacDill with DV R-4 +4 aboard; ETA 25 min.
[311.0]

LOBO 47: C-9B, Cherry Point MCAS
11:00am: Inbound NAS Key West; requests 6000 pounds fuel.
[338.0]

BRONCO 01: OV-10D, US State Dept, Intl Narc Mission, Patrick AFB
11:04am: Local training.
[133.75]

WARHOG/WARTHOG 01: A-10A.
11:19am: Area transition.
[293.225, 273.55]

NASA 961: T-38N #70-1555, Johnson Space Ctr, Houston.
11:25am: Inbound Shuttle Landing Facility
[132.65, 128.55]

DOS 236: UH-1H #71-20236, US State Dept, Intl Narc Msn, Patrick AFB
11:45am: Local training.
[133.75]

FIREBIRD: CE-182
12:31pm: IDs to Avon Park Range Ctrl as "a single 182." Worked with JSTARS' "StrikeStar" and other participants in Avon Park Bombing Range exercise; probably simulated UAV. Comms with ground element CONDOR. I believe he RTBd to Tyndall, but not certain.
[292.2, 285.725]

VIPER 01: Poss simulated acft
12:34pm: Comms with Avon Park Range Ctrl.
[292.2, 285.725]

SWINE 11: A-10A, Barksdale 917W 47FS
12:37pm: Work at Avon Park Bombing Range. Talk about use of LITENING pod on South Tactical Range, also UAV. Comms with FAC "Advance 20." RTBs to MacDill.
[290.3, 349.0, 292.2, 285.725; 138.875 & 139.8 air-air]

DOG/GOLF? 315
1:03pm: Area transition.
[346.25, 284.7]

ROCKET 73: Poss F-15E, Seymour Johnson.
1:43pm: Inbd MacDill.
[311.0]

CHIEF 11: F-15E, Seymour Johnson AFB
1:55pm: To Crystal Track for AAR with Steel 82; then works at Avon Park Bombing Range.

I've come to expect most of the clerks at the shack don't know what they're talking about. And yes, you pay peanuts - you get monkeys. I just tell em I don't need any help when they ask.

I went in to the local shack couple years back and asked if they had ICs.
"Whaddayamean ICs" said the kid.
"Ya know, integrated Circuits"
"Nope, we don't have any of those."
So I reached over and plucked up the dual D flip-flop I was looking for and said, "You don't have any of these?"

Not long after that I went in to the shack for something else. I got what I needed and headed over to the cash register corral. I'm like sixth guy in line and there's one register open. I'm already getting kinda flustered cause I really don't like standing in line. I catch one of the clerk turds on the floor PLAYING WITH A RC CAR. I yelled up the line to the lone kid manning the only open register " Hey Buddy, think you can get your pal over here to put away the toy and open another register?" Got a few smiles and nods from the others in line.

I left the store and went over to Walmart and picked up a few things. Was about an hour later that I happened to walk by the Rad Shack and I saw the store manager playing with a RC car out on the sidewalk

Pay peanuts - get monkeys.

Buying ICs these days means mail order. Digikey, Mouser, Active. etc.
Even a Fry's only sells NTE, not real parts.

Patrick AFB Area Log - Tues 28 Mar 2006

BLADE 21: F/A-18: Tails VE-203, VE-210, Beaufort MCAS VMFA-115
9:15am: Departs to Beaufort.
[289.4, 269.375, 281.425, 307.0, 273.55; 339.5 air-air]

WIZARD: E-8C JSTARS (Mission Crew callsign).
9:30am: Secure bursts on 372.3 and 351.025. Clear comms with Northrop Grumman JSTARS Ops, with JSTARS Ground Station "Terra 5," and with JSTARS Ground Mobile Station "Star 01." Also SATCOM. TOD Mickeys passed often. Have Quick comms used. Comms continous through the day and into the evening.
[123.2, 372.3, 351.025, 301.55]

NASA 904; T-38N #63-8204, Johnson Space Ctr, Houston
9:56am: Announces inbound to SLF while over MacDill AFB.
10:09am: Lands at Shuttle Landing Facility.
[284.0, 124.8, 128.55]

PITMAN 15: F-16CJ, Shaw AFB 20FW
10:45am: Inbound to CAP (Combat Air Patrol) over Orlando; rqsts switch to ATC VHF freq. Comms with OakGrove.
[273.55, 134.0, 265.4, 385.6].

JSTARS 04: E-8C JSTARS (Flight crew for Wizard)
11:47am: Comms with MacDill AFB's Lightning Ops re status of tanker "Bolt 21." Also radio checks with Patrick AFB ground control.
[123.2, 311.0, 335.8, 243.0, 308.85]

LT 621: P-3C, Jacksonville NAS VP-62 "Broad Arrows"
12:00noon: Touch-and-goes at Patrick AFB.
[133.75]

VIKING 42: C-130H, AFRC Minn-St Paul 934AW "Flying Vikings"
12:30pm: Departs Patrick AFB.
[133.75, 118.2]
Stayed low for quite a while. Wondering if Tim Tarchick was getting his last look-see at the area. Tarchick was cmdr of the 920th and is leaving to take over the 934AW.

BOLT 21: KC-135R, MacDill AFB 6AMW
12:49pm: Comms with JSTARS 04 re AAR.
[311.0, 125.075]

CHIEF 11: F-15E, Seymour Johnson AFB 4FW 335FS "Chiefs"
1:03pm: AAR with tanker "Steel." Drops GBU-31s at Avon Park Bombing

Range.
[292.2, 285.725]

SWINE 11: A-10, Barksdale 917W 47FTS
1:50pm: Works Avon Park Bombing Range.
[292.2, 264.625; 138.875 air-air]

SHARK 21: F-16C flight of 2, Homestead ARB 482FW 93FS "Makos"
3:05pm: Works Avon Park Bombing Range: 120 rounds 20mm each, 4 Mk-82s apiece.
[292.2, 285.725]

PAT 432: US Army Priority Air Transport
3:27pm: Area transition.
[132.15]

JSTARS 88: E-8C, Robins AFB.
5:20pm: Arrives at Avon Park Bombing Range; informs Avon: "We will be on station to work with Condor." "Will be establishing orbit."
6:58pm: Comms with SWINEs.
[292.2, 355.25]

ALLEYCAT: E-8C JSTARS Mission Crew
5:45pm: Comms with FAC "Condor," SWINEs.
8:01pm: Comms with Gambler (355.25).
9:05pm: Informs FAC "Advance" that "the front end JSTARS 88 has control and they are RTB Warner Robins AFB."
[292.2, 264.625, 355.25, 129.725]

RHET 99: KC-135R, Robins AFB
5:50pm: Arrives at Avon Park Bombing Range. AAR with SWINEs.
[292.2, 349.0, 127.2, 238.9]

SHOOTER 11: F-16CJ flight of 4, Shaw 20FW 55FS
6:08pm: Arrives in area, to Avon Park Bombing Range. Works in Placid MOA. AAR with RHET 99. Comms with FAC Advance. Comms re UAV Firebird.
7:38pm: RTB Shaw.
[257.7, 292.2, 264.625; 346.65; 141.9 air-air]

SWINE 31: A-10A flight of 4, Barksdale 917W 47FTS
6:15pm: Arrives Avon Park Bombing Range w 6 Mk-82s apiece, 20mm ammo; 15 min playtime. Later AAR with RHET 99. Comms with Shotgun: "Can you get the UAV off to the west and we will stay to the east?" "ASOS is on 300.0; ASOS Victor is 129.725."
[292.2, 264.625, 129.725, 300.0; 138.425 & 138.875 air-air]

BOLT 40: KC-135R, MacDill AFB 6AMW
6:59pm: Informs GFAC Condor "on station."
7:15pm: AAR with GAMBLERs.
[300.0, 238.9]

GAMBLER 01: F-16CJ flight of four, Shaw AFB 20FW
7:04pm: Arrives in area. Rendezvous with BOLT 40 for AAR.

8:01pm: Comms with Alleycat (355.25).
8:35pm; RTB Shaw AFB.
[269.3, 349.0, 292.2, 238.9, 129.725, 355.25; 140.375, 141.75 air-air]

KING 76: HC-130P #65-0976, Patrick AFB 920RQW 39RQS
7:00pm: Departs Patrick for Cape Canaveral AFS for P-J drops there.
Comms with retrieval mobile Gondola Charlie.
7:28pm: Delays landing at Skid Strip when one of P-Js lands in trees.
9:29pm: In Patrick area.
[133.75, 118.625, 251.9]

TBOLTs: F/A-18C, Beaufort VMFA-251
7:35pm: ATC Comms.
[282.2]

CHIEF 11:
7:45pm: Inbound Avon Park Bombing Range; will rendezvous with BOLT 40.
9:20pm: RTB to Seymour Johnson as two flights: Chief 11 & Chief 13.
[257.7, 292.2, 386.75, 269.3, 273.55]

AKULA 31: F-16C, Homestead ARB 482FW 93FS "Makos"
8:23pm: Checks in with Condor (129.725), then Advance (264.625) at Avon
Park Bombing Range.
9:10pm: Leaving South Tac Range to North Tac Range.
9:24pm; RTB to Homestead; comms with Mr Mako.
[129.725, 281.5, 349.0, 264.625, 285.725; 143.8 Mr Mako, 141.7 air-air]

JOLLY 21, 22: HH-60G, Patrick AFB 920RQW 301RQS
8:34pm: Departs Patrick.
9:36pm: Lands.

Well I have 4 in stock at my store. And RS.com will pull am item now if it is expected to be out of stock for more than a few days.

Oh I do work for RadioShack and I am a ham. My staff and I do know what we are talking about, but with the change of focus moving away from do it yourselfers, RS is changing also. I grew up in the Boston area and had a ton of parts shops around they all closed over a decade ago because most people do not do it themselves anymore. So RS has been and is changing with the times. They have been doing it since there inception in Boston many many years ago. If you want speciality parts go online to mouser, fry's and the others that have filled the vacuum. As for scanners well unfortuanately even the digital ones are never 100% on because of many reasons.

What kind of distance are you trying to get? Have you tried the GMRS radios?
They can be had in a model that puts out 5 watts instead of 1/2 watt that
you get out of the FRS. They claim 14 miles. They of course do not go that
far unless you are on the water, but they will give you a hell of a lot more
range than the FRS. The ones made by Midland run about $60.00 a pair for the
ones that use AA batteries.

An amateur radio handi-talkie with a decent antenna will get out a lot farther than 5 miles, especially using a repeater. The most powerful handies put out 7 watts of power. In order to get an amateur radio license, you'll need to buy a study guide and take a written exam-- it's not difficult, but it will take some time to study for it. It doesn't cost much for the license, but there will be a materials fee to the volunteer examiner who administers the FCC exam, about $20. And a good handi-talkie will cost more than $150.

K1MAN BULLETIN - B060329A -

FCC ISSUES A "FORFEITURE ORDER" AGAINST K1MAN

The "Order" is attached below. What Now?

1. The FCC has declined to provide a requested hearing, and the Fifth Amendment to the United States Constitution requires a hearing and due process of law before they can collect a dime much less the "ORDERED" "fine" of $21,000. Even a traffic ticket gets a hearing, right?

2. Therefore, the next step for the FCC, by statute, is to now sue K1MAN for the claimed $21,000 in Federal District Court in Bangor, Maine where K1MAN would demand a trial by jury (trial de novo), subpoena witnesses (Hollingsworth, Boston Office Engineers, hams, etc.), file motions, etc. The FCC can't even bring such a suit, of course, because the minimum claim in Federal District Court is $50,000.

3. By statute, unresolved forfeiture matters such as above cannot be used in any other FCC proceeding such as K1MAN's pending renewal application.

4. By statute, K1MAN can and will continue to operate until the renewal application is finally decided including all appeals to the D.C. Court of Appeals and the U.S. Supreme Court.

Bottom line is that the FCC is blowing phony legal smoke leading to Hollingsworth's 2006 Dayton "Special Achievement Award" which is not too bad for a guy who was sick on the day they taught law at law school. Wake Forest Law School should refund all of his hard earned money! Good luck in the contest!

)

File No. EB-04-BS-111

NAL/Acct. No. 200532260001

FRN 0013164975

FORFEITURE ORDER

Adopted: March 27, 2006 Released: March 29, 2006

By the Regional Director, Northeast Region, Enforcement Bureau:

I. INTRODUCTION

In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of twenty-one thousand dollars ($21,000) to Glenn A. Baxter ("Baxter"), licensee of Amateur Radio Station K1MAN, for willful and repeated violation of Sections 97.101(d) and 97.113(a)(3) of the Commission's Rules ("Rules"), for willful violation of Section 97.105(a) and 97.113(b) of the Rules, and for willful and repeated failure to file required information pursuant to an Enforcement Bureau ("Bureau") directive. The noted violations of the Rules involve interference with the ongoing communications of other Amateur radio stations, failure to exercise station control, transmission of communications in which Baxter had a pecuniary interest, and transmission of communications that constituted impermissible broadcasting.

II. BACKGROUND

In response to numerous complaints of deliberate interference caused by transmissions from Baxter's Amateur Radio Station K1MAN to ongoing radio communications of other amateur stations, the Bureau issued Warning Notices to Baxter on September 15, 2004 and October 29, 2004. Agents in the Commission's Boston Field Office ("Boston Office") subsequently conducted an investigation, including monitoring and inspecting Baxter's station and, as a result of the investigation, the Boston Office issued a Notice of Apparent Liability to Baxter on June 7, 2005, in the amount of twenty-one thousand dollars ($21,000).

In the NAL, the Boston Office found that Baxter apparently willfully and repeatedly violated Section 97.101(d) of the Rules, which states that "[n]o amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal." FCC agents observed Baxter's Amateur Radio Station K1MAN commence transmissions on top of existing communications on 3.890 MHz on November 27, 2004, December 8, 2004, and March 31, 2005.

The Boston Office further observed that Baxter apparently willfully and repeatedly violated Section 97.113(a)(3) of the Rules by transmitting, on November 25, 2004, and March 30, 2005, information regarding his website, which offers various products for sale, including a monthly newsletter published by Baxter and offered for sale for forty-five dollars per year. In addition, on December 1, 2004, Baxter transmitted a seventy-minute interview with a person who was considering whether to retain Baxter Associates, an employment-search firm owned by Baxter. During the transmission, Baxter discussed fees for his franchises, investments, and franchising opportunities. Section 97.113(a)(3) of the Rules prohibits an Amateur station from transmitting any communications in which the station licensee or control operator has a pecuniary interest.

The Boston Office also concluded that Baxter apparently willfully and repeatedly violated Section 308(b) of the Communications Act of 1934, as amended, which provides that the Commission "during the term of any. . .licenses, may require from...a licensee further written statements of fact to enable it to determine whether such original application should be granted or denied or such license revoked . . . ." Baxter was directed in Warning Notices dated September 15 and October 29, 2004, to provide information regarding how station K1MAN was controlled and the identity of the control operator. The Boston Office found that Mr. Baxter's statements that "[n]o corrective actions are necessary" and "[n]o changes are needed with regard to station control" failed to comply with the Bureau's demand for station information.

Baxter also was found to have apparently willfully violated Section 97.113(b) of the Rules, which prohibits, with limited exceptions not applicable in this case, an Amateur station from engaging in any form of broadcasting or transmission of one-way communications. The Boston Office concluded that the pre-recorded seventy-minute interview with a person interested in retaining Baxter Associates, during which there was no station identification, constituted a "broadcast" and an impermissible one-way transmission.

The Boston Office further concluded that Baxter apparently willfully failed to exercise control over his station, as required under Section 97.105(a) of the Rules. On December 19, 2004, station K1MAN repeated the same pre-recorded phrase, and segments thereof, for 45 minutes on 3.975 MHz after which the transmissions ended abruptly in mid-sentence without the station identification required by the Rules.

Baxter submitted a reply on June 16, 2005 denying any liability for the forfeiture amount. Citing the Fifth and Sixth amendments to the United

States Constitution, Baxter requests "all documentation regarding the alleged apparent liability and. . .a trial like hearing before the full Commission." Baxter notes that, although he previously has received three Notices of Apparent Liability, he has not been able to appeal those to the full Commission and therefore repeatedly has been denied access to "the Washington D.C. Court of Appeals in the pursuit of due process of law as guaranteed by the United States Constitution." Baxter does not submit any substantive responses to the apparent violations set forth in the NAL.

On July 18, 2005, REC Networks ("REC"), through its principal Rich Eyre, filed a Petition for Leave to File Amicus Pleading and an associated Motion for Partial Reconsideration or Declaratory Ruling. REC is concerned that the findings in the NAL regarding Baxter's apparent liability for violating Section 97.113(a)(3) of the Rules by transmitting references to his website could subject many amateur radio licensees to similar enforcement action merely for uttering a website address on their stations.

III. DISCUSSION

The forfeiture amount proposed in this case was assessed in accordance with Section 503(b) of the Communications Act of 1934, as amended ("Act"), Section 1.80 of the Rules, and the Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines. In assessing forfeitures, Section 503(b)(2)(D) of the Act requires that we take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and such other matters as justice may require.

We decline to grant Baxter's request for a hearing. Section 503(b)(3)(A) of the Act states that "[a]t the discretion of the Commission, a forfeiture penalty may be determined against a person .. after notice and an opportunity for a hearing before the Commission or an administrative law judge...." Section 1.80(g) of the Rules states that procedures for hearings "will ordinarily be followed only when a hearing is being held for some reason other than the assessment of a forfeiture...." Accordingly, the "reference to a notice of opportunity for hearing mentioned in Section 1.80(g) of the Commission's Rules is a discretionary provision available to the Commission that is not normally utilized when only monetary forfeiture matters are involved." The Rule also states, however, that "these [hearing] procedures may be followed whenever the Commission, in its discretion, determines that they will better serve the ends of justice."

Baxter has not shown that there is any reason for us to follow anything but our ordinary procedures for monetary forfeitures or that a hearing "will better serve the ends of justice." Baxter received notice regarding the legal and factual bases for the apparent violations and proposed forfeiture and has been afforded an opportunity to respond

"why no such forfeiture penalty should be imposed." Although Baxter categorically claims no liability for the forfeiture, he has chosen not to present any specific exculpatory arguments or evidence in response to the violations set forth in the NAL. A licensee's decision to forego the opportunity to present exculpatory arguments and evidence in response to a NAL does not create a right to a hearing and, accordingly, we conclude that an evidentiary hearing is not required in this case.

We have examined Baxter's response to the NAL pursuant to the statutory factors above and in conjunction with the Policy Statement. As a result of our review, and based on the record before us, we conclude that Baxter willfully and repeatedly interfered with ongoing communications of other stations in violation of Section 97.101(d) of the Rules. We further conclude that Baxter willfully and repeatedly transmitted communications in which he had a pecuniary interest in violation of Section 97.113(a)(3) of the Rules. We find that Baxter willfully and repeatedly failed to file requested information pursuant to a Bureau directive. We further find that Baxter willfully engaged in broadcasting in violation of 97.113(b) of the Rules and willfully failed to exercise control of his station in violation of Section 97.105(a) of the Rules. Considering the entire record and the factors listed above, we find that neither reduction nor cancellation of the proposed $21,000 forfeiture is warranted.

Finally, we deny REC's Petition for Leave to File Amicus Pleading because we find no basis for consideration of the associated petition, either as a petition for reconsideration or as a petition for declaratory ruling. Although REC recognizes that it does not have standing to file pleadings in this proceeding, REC requests that we accept its Petition because it believes the findings in the NAL regarding references to websites on amateur radio stations may impact other amateur licensees. As a petition for reconsideration, REC's pleading is premature. A Notice of Apparent Liability is not a "final Commission action," which is a predicate for filing a petition for reconsideration under Section 1.106 of the Rules. Therefore, as a petition for reconsideration, REC's pleading will be dismissed with prejudice. In the alternative, REC requests that we treat the pleading as a petition for declaratory ruling. Because the petition seeks an interpretation of the Commission's Amateur Radio Service rules as they relate to website references on amateur radio stations, it is more appropriately addressed by the Wireless Telecommunications Bureau, which is the Bureau responsible for implementing rules and policies with regard to the Amateur Radio Service. Accordingly, the petition for declaratory ruling will be dismissed without prejudice and may be re-filed with the Office of the Secretary in accordance with the procedures set forth in Part 1 of the Rules.

We take this opportunity to note, however, that the violation for which Baxter is being assessed a forfeiture is not the mere mention of a website. Baxter violated Section 97.113(a)(3) of the Rules because he

has a direct pecuniary interest in the products offered for sale on the website about which he provided information on his amateur radio station.

IV. ORDERING CLAUSES

Accordingly, IT IS ORDERED that, pursuant to Section 503(b) of the Communications Act of 1934, as amended, and Sections 0.111, 0.311 and 1.80(f)4) of the Rules, Glenn A. Baxter IS LIABLE FOR A MONETARY FORFEITURE in the amount of twenty-one thousand dollars ($21,000) for willfully and repeatedly failing to furnish information requested by the Bureau, willful and repeated violation of Sections 97.101(d)and 97.113(a)(3) of the Rules, and willful violation of Sections 97.105(a) and 97.113(b) of the Rules.

IT IS FURTHER ORDERED that REC Network's Petition for Leave to File Amicus Pleading IS DENIED and REC Network's Petition for Partial Reconsideration or Declaratory Ruling is in part DISMISSED WITH PREJUDICE and in part DISMISSED WITHOUT PREJUDICE as set forth herein.

Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within thirty (30) days of the release of this Order. If the forfeiture is not paid within the period specified, that case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act. Payment of the forfeiture must be made by check or similar instrument, payable to the order of the Federal Communications Commission. The payment must include the NAL/Acct. No. and FRN No. referenced above. Payment by check or money order may be mailed to Federal Communications Commission, P.O. Box 358340, Pittsburgh, PA 15251-8340. Payment by overnight mail may be sent to Mellon Bank /LB 358340, 500 Ross Street, Room 1540670, Pittsburgh, PA 15251. Payment by wire transfer may be made to ABA Number 043000261, receiving bank Mellon Bank, and account number 911-6106. Requests for full payment under an installment plan should be sent to: Associate Managing Director, Financial Operations, 445 12th Street, S.W., Room 1A625, Washington, D.C. 20554.

IT IS FURTHER ORDERED that a copy of this Forfeiture Order shall be sent by Certified Mail, Return Receipt Requested, and regular mail, to Glenn A. Baxter at his address of record and to REC Networks at its address of record.

Gee, is Glenn still on the air? He expired on 10-17-2005.
It's all a mute point. He is set aside and still pending:
http://tinyurl.com/ktyr7

BRAND NEW ORDER!!!
http://www.fcc.gov/eb/Orders/2006/DA-06-663A1.html

Here are the comments on qrz.com:
http://www.qrz.com/ib-bin/ikonboard.cgi?act=ST&f=3&t=118292

And the old notice:
http://www.fcc.gov/eb/FieldNotices/2003/DOC-259301A1.html

It's time for Glenn to find a new hobby.

Ok, here's a question, Was K1MAN's transmissions directed to the general public, or were they directed to the Amateur Radio Service? You see for it to be consider a "broadcast" the transmission must be directed to the general public. If it's directed to the general public then it's Illegal, BUT, if it directed to the amateur radio community and consists of material of interest to the amateur radio service, then it's legal. One of the problems I have with amateur operators over this thing is that amateur believe that the content that is directed to the amateur radio service must be the same type of format as the ARRL bulletin. (a newscast) yet there is nothing in the rules or regulation that states that, nor is there a FCC order that states that either. It up to the station on how they want to disseminate the information. Section 326 of the Communication Act prohibits the FCC from "controlling the content of ANY radio station" So I would really like to know where it states it has to be a certain format. The next thing is Amateur's have to realize that one, 47CFR 97.3 (a)(25) and 47 CFR 97.111(b)(6) is here to pretty much to stay the last time some one tried to change them and was denied the FCC said they would not hear on the matter any more, Secondly, those two rules is not just for the ARRL, anyone may operate a information bulletin, just like anyone can run a beacon. As the FCC stated in their April of 2004 letter to Baxter and is also on their website "there is no time limit on information bulletins." So there is some real questions regard Baxter and the FCC.
1. was it directed to the general public or to the amateurs?
2. was this enforcement "content neutral"? (the FCC under the law is to make content neutral dissensions in regards to making rules and enforcement action.)
3. Should the FCC clarify the rules a little better?

The "broadcasting" charge is but one of the issues and I think the NAL makes it fairly clear why Baxter's activities are not allowed while ARRL transmissions are. However, it doesn't matter that much because they are further charging him with not answering their technical questions about station control and who was the control operator during the observed violations and other things. Any one of these charges is enough for them to collect on the NAL and deny his renewal application. This argument is a straw man which the FCC has now clearly dismissed.

Do some rules need to be clarified? Perhaps. The FCC did recommend that REC re-file and use the proper procedure to get a clarification of the rules in this regard. I think I understand what the rules mean, and how the ARRL (and others) can do what they do and why Baxter's activites, as described in the NAL, is in violaton of the rules. If you don't see the differance, please ask the FCC to clarify, but it seems clear to me.

As to Baxter's claim that they cannot deny his pending application... I wouldn't bet on it. As I see it, these charges are now "confirmed" and from the FCC's perspective no longer pending. The wheels of the FCC may turn slowly, but they *do* turn. This would lead me to believe that the denial of his pending renewal application which is under review will be forthcomming. As I see it, the only question is how long will it take for them to collect the $21k.

Once they deny his pending application, and they will, things will get very interesting indeed. K1MAN will have no authority to operate and you can bet the FCC will be ready to deal with him if he does. Again, it may take awhile, but don't be fooled into thinking they won't act. Should he insist, I'm sure they will eventually pry the microphone out of his hands as they slip on the handcuffs. It could take a few years, but don't think it won't happen.

To Mr Baxter I say the following: Don't do it. You will only loose. Spare yourself, your family, the FCC and us. Just sell all your transmitting equipment so you are not tempted to transmit, pay the fine and get on with your life by finding another hobby. It is very unlikley that you will ever be granted another license so move on. You don't have to take my advice, but you really should consult a competent laywer, you are in trouble if you continue to push this adgenda.

....it's already Friday in Australia ;)

What's the scientific term for the condition wherein you find this
sort of thing funny? I dunno, but I have it. I hung my head in shame
while I clearly laughed at the teacher, cop and priest who caught me
with it. I looked contrite BUT THEY KNEW BETTER!

QUOTE of the day:
"Son, never listen to a priest or a policeman. The only thing they
have the key to is the shithouse." ~ William S. Burroughs

FUCK OWENS | 1929-2006
Singer Found Dead In His Own Vomit
By Randy Lewis, Leaky Times Parody Staff Writer
March 26, 2006

Fuck Owens, the Bakersfield rebel who brought a distinctly California
flavor to country music in the 1950s and '60s and built a Central
Valley-based multimedia empire belying his "Hee Haw"-bred porno
persona, died Saturday. He was 76.

Owens died at his home in Bakersfield, said Jim Shaw, the family's pimp

and longtime member of his Fuckaroos band. The cause of death was
choking on his own vomit from a barbiturate overdose, and the country
music
giant who charted 21 No. 1 country singles from 1963 to 1988, among
them "Act
Naturally," "I've Got a Harlot by the Titty" and "Sweet Poontang From
Hell," had been in declining health for years after undergoing surgery
for anal cancer in 1993.

Just hours before he died, Owens was on stage with a huge erection
Friday night with the Fuckaroos singing at his $5-million Bakersfield
nightclub and restaurant, Fuck Owens' Crystal Meth Palace, something
he'd done
routinely since opening it almost 10 years ago.

"He had come to the club early and had a chicken-fried steak dinner and

bragged that it's his favorite meal," Shaw said. After dinner, Owens told band members he didn't feel up to performing and decided to drive home.
On his way to his car, fans on their way in told him that they had come

from Jakarta, Indonesia, and that they were really looking forward to hearing him fart. Owens turned around and pooted. There were numerous chunks of chicken-fried steak in his drug-induced vomit, stated wetback mexican Bakersfield coroner Herbert 'Jesus' Valasquez.

"He mentioned that onstage: 'If somebody's come all that way, I'm gonna

do the show and give it my best cum shot. I might groan and squeak and fart, but I'll see what I can do,' " Shaw said. "He died in his sleep -
they figure it was about 4:30 [a.m.] - probably of choking on vomit. So
he had his favorite meal, played a show, got laid, and died in his sleep. We thought, that's not too bad."

In the 1950s, when the music coming out of country capital Nashville was laden with swelling groins, swirling toilet water, and choirs of flatulent banshees, Owens put out stripped-down records that were part

Phuck Berry and part Shitboy Williams. His recordings jumped with stinging electric guitar work by his close friend and musical partner Don Rich, further punched up by an energetic electric vagina. Owens also
greatly enjoyed those underground videos of Chuck Berry micturating on his many lady friends, as well as Berry's trend-setting guitar stylings.

"I don't think there have ever been two people in this business closer than Don and I," Owens said backstage after a rare L.A. performance at the House of Blues in 1998. "It's like we could read each other's minds."

The relationship was central to Owens' success, and when Rich was killed in 1974 in a an autoerotic strangulation accident, the loss was devastating. After Rich died, Owens recorded sporadically, but famously

came out of his self-imposed retirement and landed his final No. 1 hit in 1988 with "Suck My Flailing, Turgid Fleshpipe, Bitch." That duet paired
him with Blight Yo Cum, one of
many younger-generation country stars who sang his praises, in part hoping to undo some of the damage inflicted on his musical credibility by his years playing a passive fem in gay porno loops exhibited for decades in some of the more seedy joints around Times Square.

"What a musical motherfucker," said Chris Hillman, a veteran of California rock, country and folk music as a member of the Tyrds, the Farting Burrito Brothers and the Clitoral Climax Blues Band. "His music

had so much norteño and Tex-Mex poop in it. It had such a California influence that Nashville never had....

"That put the state of California on the map. Not better, just different. It had more pussy," Hillman said Saturday. "There was a regional
difference, and the different music that was out here - 90% of which was Hispanic, especially in Central California - filtered right into their
stuff."

Robert Hilburn, former pop music critic at The Times, spouted his usual

inconsequential, pompous nonsense.
"Owens and his indispensable musical partner Don Rich embraced the energy and exuberance of the porno sound," Hilburn said. "Even after all these
years, it's hard to listen to one of his sex moans without joining in."

Nashville also had few country musicians with the business savvy to own

their master recordings, as Owens did, wresting them from Capitol Records in the 1970s after a legal battle. The victory gave him, rather than
the record company, control over how his recordings would be released in
the future. In the 1990s, when Garth Brooks was infamously involved in a
sex scandal involving a number of tranvestites, he
sought Owens' counsel. The elder musician told him to go "fuck himself sideways".

Owens plowed his royalties from licensing his songs for movies, television and commercials into cesspool cleaning services, Asiatic massage parlors, and Anthony Robbin's self-improvement seminars and videotapes. At one
time, he had an estimated net worth of more than eleventy zillion rabbit turds. A 1992 Worth magazine survey of the bitchiest people in the top 100
U.S. metropolitan areas put Owens at No. 1 in Bakersfield.

"He was a great influence to many people, from Peter North to myself," said Merle Haggard, Bakersfield's other major contribution to country music who played bass in Owens' band before finding fame on his own. "Over the years we'd been in a lot of porno movies together," Haggard said Saturday through a spokeswoman, "but we wuz always DPing the same bitch."

Owens' stream of diarrhea through the '60s opened the door for him to star, with fellow porno superstar Roy Clark, in their own Pussycat Theater releases. The series' corny humor and stereotyped images of rural life and people
ran counter to the creative freshness of Owens' recordings and contributed strongly to Owens' fall from the charts in the '70s.

"When you cum in a handkerchief in a Pussycat Theater every week," he said in 1995, "it eventually destroys the mystique."

But he rarely sounded apologetic, saying he earned more money for a few

weeks of "Fuckhole" filming than he and his band made in a year of touring and recording. "Many whores copulate for money, baby, whoa, are

you one of them?" inquired Owens of his many cynical detractors.

"Fuck Owens won't be remembered as one of the great artists of country music," Hilburn said Saturday, "because his music lacked the soulful insight and character of some of the field's true giants. But he will be remembered because his music was so superbly crafted that they still

make your emotions soar."
But then again, who gives a fuck what pompous ass Robert Hilburn says?

This son of a Texas sharecropper was willing to sacrifice some credibility, having once vowed to do anything rather than fuck in porno

movies again. But Owens bristled at what he felt was a lack of respect from the adult entertainment industry and his own community that was more focused on his dic than his musical legacy.

Alvis Edgar (Fuck) Owens was born Aug. 12, 1929, barely two months ahead of the stock market crash, in Sherman, Texas, a town of 1,500. Along with millions of others from the Cotton Belt, his family - mother
Edgar, father Emmie Mae, two slutty sisters, a Siamese twin brother, an

aunt, an uncle, a grandmother, a cousin, and a partridge in a pear tree

headed west when Fuck was 12, looking for a better life as a gay porno fluff boy.

They moved from one town in Arizona to another, and spent several years

in Mesa. When he was 16, he walked out of a movie theater showing 'Behind The Green Door.' "I wasn't going to watch that movie," he told

High Times Magazine in 1985. "I'd already lived the damn thing."

Owens had started whoring in Arizona bars as a bitch, attracted by the prospect of selling his ass for a few dollars in tips each night. It was in Mesa that he met singer Bonnie Campbell, whom he fucked in 1948.

With two young sons in tow, they moved in 1951 to Shitsville, CA where many who had fled the Dust Bowl were creating a fertile cow manure methane gas stank ass music scene, much of it centered at the Flatus, a

celebrated roadside rest stop where the rest stop toilets have not been cleaned
since 1967.

He also played guitar with another Bakersfield singer, Tommy Collins, on Collins' 1953 hit "You Better Not Do That." One of the early recordings
Owens made on his own, "Hot Dog," came out in 1956, just as Elvis Presley's name was becoming known nationally. Owens put "Hot Dog" out under the name Corky Jones in an attempt not to alienate country music fans who might not approve of his record's more energetic and upbeat rockabilly sound.

About that time he also decided to try out a new type of guitar that allowed his playing to cut through the din at the Blackboard. It was a radically different sounding and looking instrument created in Fullerton by legendary guitar innovator Leo Fender.

Owens was among many Bakersfield musicians who field-tested Fender's solid-body electric guitars, instruments that quickly became integral to California country music for their affordability, durability and clean,
bright, twangy sound. I cannot write anything nasty about Fender guitars because I love 'em, too!

He also began writing his own songs, one of which, "Second Fiddle," gave him his first chart hit, reaching No. 24 in 1959. Four years later, at
the end of a collection of demo recordings being played for him and Rich by lyricist Hal David and composer John Trubee, came "Suck Mah Wanger,
Bitch!"

"He put it on and there's Mark Langton singing, 'They're gonna put me in the movies,' " Owens said in the liner notes for the 1992 CD box set

"The Fuck Owens Collection. "And I loved that song. I wanted it right then.
It's a real corny piece of shit."

It became his first No. 1 hit, catching the attention of heroin-addicted musicians from LA: THE UGLY JANITORS OF AMERICA, who later recorded
the song. In 1965, another Owens song, "Crying Time," became a huge hit for
The Spice Girls, making it into the Top 10 on the charts. (..and really who the fuck cares?)

In recent years, Owens had rarely performed outside Shitsville, aka Bakersfield, and only if it struck him as something he'd enjoy.
"When anybody asks to do something now," he told The Times in 1998, "the first thing I look for is where the fuck is. If it's there, then I'll
sell my ass for a few bucks."

Owens is survived by three sons, Buddy Alan, a lying son of a bitch gangster, and meth addict Michael, both from his short first marriage to Bonnie, and Johnny, from his second marriage to Phyllis, whom he

divorced. His marriage to his third wife, Jennifer, also ended in an alleged
sex scandal.

Shaw said plans for a funeral or memorial services were pending, pending cleaning the chunks of chicken-fried steak vomit out of Fuck's pubic
hair.

So... I take it you don't agree? Fine with me if you don't.

But let's watch and see what happens. Eventually we will all know who was right.

Like I said, don't take the seemingly slow pace of this as an indication of the eventual outcome. Having observed the workings of government, it may be slow, but it does eventually get the job done.

The FCC with all it's problems will eventually deal with Mr Baxter. It will take awhile yet, but they will deal with him just like they are dealing with Jack Garretson who is sitting in jail right now and faces FCC imposed fines too. You know it's sorta funny that he used a lot of the same arguments I hear used to justify K1MAN's position and it seems that they will have about the same impact.

And, just as an aside.. My IP is quite safe, I assure you.

I suppose when this is over, we all can decide who wins, Baxter or the FCC.

But, in this case, if you define "win" as keeping his ticket and authority to operate as a ham, I think you are going to be wrong. Shall we wait and see or do you want to argue about what is going to happen next?

What is the goal here? To spit in the face of the FCC? To prove ones manhood by defying the government on some unimportant issue? Where is the substance of Baxter's arguments? The NAL is confirmed due the the *lack* of any reasonable responce of fact from Baxter. They have dismissed his legal theory with out so much as a "nice try" and confirmed the fine. What's next? Court for sure, but how do you think that will go? (See the Garritson case for an example if you want.)

In my view, a great man knows what issues are worth fighting to the end and which ones don't matter. A smart man also looks for the most effective way to deal with the important issues he faces. Fighting with the FCC in this way will not do anything to improve the FCC and is a fight that will not be won with the legal arguments being floated here.

Don't get me wrong, Glenn, I'm really on your side, but you have some legal misconceptions. Consider this post as "playing devil's advocate", if you desire. I really am trying to help you.

"The FCC has declined to provide a requested hearing, and the Fifth Amendment to the United States Constitution requires a hearing and due process of law before they can collect a dime much less the "ORDERED" "fine" of $21,000. Even a traffic ticket gets a hearing, right?"

ANSWER: You weren't denied due process because, in your responses to the NAL, you deliberately refused to answer the questions you were asked. Therefore you raised no substantial or material questions of law or fact that required a hearing. A hearing is only required when substantial and material issues of law or fact are raised by the pleadings. [See, for example, Title 47 USC Sec. 309(e), which deals with license applications.] This is also why, for example, a court can grant a demurrer or a motion for summary judgment in a civil case and deny a litigant his right to trial. This is just another way of saying you don't have the right to a hearing in the abstract; there has got to be a reason for holding one. Also, you are going to get a hearing before the U.S. District Court, so you can't claim you are being denied a hearing.

"Therefore, the next step for the FCC, by statute, is to now sue K1MAN for the claimed $21,000 in Federal District Court in Bangor, Maine where K1MAN would demand a trial by jury (trial de novo), subpoena witnesses (Hollingsworth, Boston Office Engineers, hams, etc.), file motions, etc. The FCC can't even bring such a suit, of course, because the minimum claim in Federal District Court is $50,000."

ANSWER: That's incorrect. First, the monetary jurisdictional minimum has now been raised to $75,000.00, but it only applies to diversity jurisdiction cases. The Forfeiture Order enforcement action will instead be a federal question jurisdiction case, to which the monetary jurisdictional minimum doesn't apply.

In addition, bob_d@yahoo.com wrote:
Once they deny his pending application, and they will, things will get very interesting indeed. K1MAN will have no authority to operate and you can bet the FCC will be ready to deal with him if he does.

ANSWER: Nope. Title 47 of the USC, Sec. 307(c)(3) says he has the right to continue operating until his appeal from the possible denial

of his renewal is finally decided.

Well.. Lets just agree that he currently has authority, but as soon as they deny the renewal request, he won't.

I think the NoL makes it fairly clear that the FCC is going to do just that. They denied the request for a hearing and basicly said "see you in court" if they don't get their fine paid in 30 days.

Baxter has a choice.. Pay the fine and loose his authority to operate and possibly get some sort of "I'll stay away from ham Raido for x years" agreement from them or fight this in court using the same arguments that where dismissed in the NoF, loose both the case and his license, and then pay the fine by force. Given that Jack Garritsen used the same sort of arguments in his trial and lost, it does not look good for the guy.

Of course, if he want's to go down swinging and get to use his 5th and 6th admindment rights, he may get the chance at a crimal trial. But I don't think we are very close to that yet. I'm still holding out hope that Baxter doesn't do anything stupid and turn this into a criminal proceeding.

Sorry, I was inaccurate in my statements when I left out the appeal process.. As you said, when his renewal application is decided and Baxter appeals (which he will), and IF the appeal does not reverse the decision (which seems likely) THEN he will loose his authority to operate.

So, if my understanding of the process here is correct, the events go as follows:

1. Renewal Application is timely filed (Already done)
2. Application is set-aside for review (Already done)
3. The Review determines that the application will be denied (Pending now)
4. The decision to deny is appealed (Not done yet, must be done after denial)
5. The Appeal causes a hearing where the decision to deny is argued
6. The appeal hearing is decided

So, if you assume that the FCC will deny the application and Baxter will appeal the decision, then he will retain his authority to operate until the outcome of the hearing.

Am I correct?

"Well.. Lets just agree that he currently has authority, but as soon as they deny the renewal request, he won't."

Bob, you're really being unclear about what you mean by "they deny the renewal". The point of 47 USC Sec. 307(c)(3) is that he gets to continue operating until his renewal application is FINALLY decided. This means decided by the courts. Whom do you mean by "they"?

Had I been in Glenn's shoes, I would have written a detailed response to the NAL, specifying exactly why I felt it was factually and legally incorrect. Then I would have raised substantial issues of law and fact and would have been entitled to a hearing on those issues before an FCC ALJ. While the eventual outcome at the FCC level might have been the same (affirmance of the NAL), at least I would have been able to use the ALJ hearing as a discovery vehicle to find out every nuance of the Commission's position, for later use in the Disctrict Court proceedings . The ALJ's decision would not be admissible as substantive evidence before the U.S. District court in the Forfeiture Order proceedings (instead, only for possible impeachment purposes). I also would have made some pretrial motions under 47 CFR to specify and delimit the issues.

That's what we were just talking about. If your news feed is not showing you the posts on them try looking at the group on Google. The GMRS are available in models that start at 1watt, and go to as high as 5 watts that I have seen. The Midland ones that I use at work are 5 watt. They claim 14 mile range, but that's not going to happen in the real world. They do work one hell of a lot better than the FRS and the older 1 watt GMRS I used to use at work. We use them in and out of buildings. With the 5 watt there is never a problem no matter where we are. The run about $60.00 a pair for the ones that take AA batteries. Should give you some pretty good range in the woods. I have found they also work great when traveling to keep in touch with multiple vehicles.

You can't compare Garritsen's case with Baxter's. Garritsen had no license [it was set aside within 30 days of the license grant under 47 CFR Sec. 1.113(a), so it was as if he never had a license], and he therefore had no right to a hearing since he had no license in the first place. Baxter has a valid license for which renewal is being denied. This is governed by 47 CFR 1.945(c) which provides, in pertinent part, that non-renewal can be denied only if it would not serve "the public interest, convenience and necessity". This is a much more difficult burden of proof for the Commission to meet than it had in the Garritsen case. Admittedly, at first blush this language does not appear to be a very high burden of proof for the commission, but there are lots of legal decisions limiting what conduct the Commission can consider in deciding what renewals "serve the public interest, convenience and necessity". I sure hope Glenn hires a good communications lawyer.

1094. tower/transmitter owners in the US

Hello all,

I am new to the group but have a specific reason for joining. The primary reason I joined, like many of you I am sure, is to get information about short wave radio. My situation: I have the appropriate parcel of land (110) acres that is free from any legal impediments to building a short wave radio tower. The land is located in West Central Alabama, in rural Fayette County.I also have the necessary funding to build a short wave radio tower and transmitter. The site has been evaluated as a perfect location that is virtually free from any potential liability and from the perspective of reaching millions of people in Mexico and Central America.

Questions for the group:

1. What are the potential financial rewards for owning and operating a short wave radio transmitter/tower?

2. How does an owner go about establishing a revenue stream from potential purchasers of air time.

3. Who would the primary customer base be?

Comments or suggestions?

Thank you,

DrJoe (newbie)

Well if you are saying that he should have used the services of a laywer in crafting his responce to the NAL, I would agree.

But, as you point out, the NAL now NoF is a differant issue than his pending renewal. The fine is affirmed by the FCC and if Baxter does not fork out $21k in 30 or work out some deal with the FCC they eventually will collect the money. That issue is now a done deal, it's just a matter of time. How much time will be largely up to Mr. Baxter. He can easily drag this out.

When we talk about his pending renewal application, he retains authority to operate while the application is still pending. Once it is fully denied, he will loose his authority. Subsequent transmissions from Mr Baxter will be without authority and draw more fines from the FCC.

You say there is an appeal process here and I can only defer to you on that. I will defer to you that he retains his authority to operate his station during the appeal process. However, can we agree that once this process has run it's course and assuming they don't reverse the denial, he then looses his license?

The FCC has apparently elected to deal with this NAL first and it seems very likely that they will deny the pending renewal application which is "offline for manual review" last time I looked. I suspect that they will use the NAL as part of their justification. Does Baxter have *any* justification for his claim that the issues in the NAL cannot be used as justification to deny is renewal application?

What you say is correct. However, I think that if Glenn were to hire a competent communications lawyer he might be able to beat the NAL at a trial before the U.S. District Court. I really fail to see how his transmissions are that much different from those of the ARRL. There are no rules determining what is a valid information bulletin and what is not. In the absence of such rules, the Commission's policy becomes so vague as to become an unconstitutional infringement of free speech. But these issues need to be properly briefed and tried before the U.S.D.C., and so far Glenn hasn't shown that he is willing or able to do so.

Well.. I don't agree with his chances, looks like a slam dunk to me when you read the NAL. I also don't agree that the ARRL's actions are comparable to Mr. Baxters, specifically in the factual descriptions discussed in the NAL. I also don't agree that "somebody else did it too" is a valid argument.

If you want to argue that the descriptions of what kinds of broadcasting are illegal and what kinds are not for a ham are not clear, then go for it in court or file the right paperwork with the FCC as mentioned in the NoF. But this has nothing to do with the ARRL. Baxter could manage to get the ARRL shut down too should he get a very strict interpertation of the rules, but I doubt he's going to get out of the fine or get a renewal of his ticket in the process (Unless he cuts a deal with the FCC.)

However... I do agree that he's going to loose for sure without a good laywer. Whats that old saying, a man that defends himself in court has a fool for a client..

But can you address my last question.. Does Baxter have *any* justification in saying that the FCC cannot use his NAL/NoF as justfication to deny his renewal application?

The short answers:

1. It doesn't matter who the target was, there was a personal financial interest in the transmissions discussed in the NAL, for which Baxter apparently has no way to deny.
2. Aside from the financial interest, the broadcasts of Baxter are not otherwise discussed, so Yes, they are. (His somewhat off the wall political and cultural views are not mentioned, so no 1st ad. rights issues here..)
3. Perhaps they should. The rules seem clear to me, but apparently not to everybody. You want to shut down the ARRL broadcasts? Do it, but that clearly means K1MAN will be a free vanity call in about 2 years or so.

I wonder if a jury of his peers would agree with his arguments? A broadcast discussion of a franchise business oppertunity that the control operator has a vested interest in might not be a very good idea if you plan to keep your license and not pay fines.

Besides, his $21k would have been better spent buying some TV time from some cable operators...

1. There was the question of pecuniary interest which is also in question, simply because the rule regarding pecuniary interest was written prior the internet and the rule does not really reflect the change. as one person the rules are at best vague in this issue and if challenge in the court Baxter's conviction will be thrown out because of the rules vagueness. (that's if baxter gets a real lawyer and not play one)
2. Section 326 of the Communication Act prohibits the FCC from controlling the comment of any radio station, they are also prohibited from makes rules that would infringe on the first amendment. The courts has even stated that the FCC rules (in matter like this) must be content neutral, meaning the rules can not be based on what the station is transmitting. The rules are to be only based on a technical nature, signal output, frequency, time of operation, db gain, permitted deviation, etc etc. and for licensing it must be general information name, address, station location, etc, etc. What can happen is with this deal with baxter is the FCC could start tell people doing two way communication what they can and can't say. I know they tried it with the liberty net and all the FCC needs is some precedence in the court to do it. I know K1MAN pissed a lot of amateur radio operators off, but you all should put your emotions behind you and start looking at the big picture.

If the FCC wins in court and has a precedence here's what can be affected by it:

1. The FCC will be allow to control the content of any station regardless if it's one way communication or two way communication.
2.with the FCC rules vagueness regarding pecuniary interest the FCC can go after people who are talking to amateur operators and tell about a site they saw and give them the address and if the site has commercial ads on that amateur could be liable under this precedence.

Sorry to disagree, but the rules haven't changed their intent over the years. You simply cannot use ham radio to help line your pockets. According to the FCC, that's what he did.

Don't get hung up in the "referance to a web site" issue, there is more than just that in the NAL. Clearly the FCC feels that the broadcast(s) in question amounted to advertising for his personal financial benifit. Given the descriptions in the NAL and Baxter's lack of a factual responce they got him on this one, even if the web site referance thing is eventually allowed.

The FCC CAN dictate content on broadcast stations and does. Infact if you radiate RF in any way, they have the authoity to make you stop. They regularly hand out fines for such things. (A certin football half time show comes to mind here.) However that begs the question of what they have to say about ham radio... Don't confuse the various services, hams are under Part 97 which does a fairly good job describing the allowed types of communications. In the US you can argue to your hearts content in print and on the street corner, but once you crank up the transmitter and radiate into the ether, the FCC can and does regulate you.

Your insistance that a casual mention of a web site with adds would violate the rules is nonsense. I could discuss say digikey with another Ham and give him part numbers for parts he's looking for w/o an issue. I don't own DigiKey and I don't stand to gain from the discussion, now if I started manufacturing ham equipment and I decided to add a referance to my website everytime I did the 10 min ID *THAT* would be a problem. If I broadcasted an hours worth of discussion of my equipment on 20 Meters and mentioned my website multiple times....

You get the picture.

Perhaps you don't... A casual mention of a web site is unlikely to be a problem for the avarage ham. Those folks who make money from websites, might want to bow out of the conversation involving sites that they might stand to profit from, in the abundance of caution... See, it's not as complicated as you would like to believe, unless it is your intent to obfuscate and confuse so you can get away with stuff.

So which is it? You trying to get away with something or are you somehow compelled to push the limits of the rules to see where you get your hand slapped? Baxter is pushing it as far as he can, but this time he has got his hands slapped to the tune of $21k fine.

Such nonsense I have not seen since my kids where very young...

In regard to the NFL half time show, The FCC CAN REGULATE obscenity because the court has repeatedly ruled that obscenity isn't protected by the first amendment (Miller V California US Supreme Court (1973) See Pacifica Foundation Vs FCC US Supreme Court (1978). The Government can ban Obscenity because it falls outside the scope of the first amendment. Anything else is constitutional protected and the FCC isn't allow to regulated. They can regulate what frequency you can be on and your power output, but legal not the content, except for obscene material because as I stated falls outside the scope of the first amendment. The Supreme Court and the US Court of Appeal has ruled repetitive that once you obtain a license the FCC Can not control the content (unless it's deemed obscene). Again in regard to website, this is new territory which has not been ventured into, plus the rules are vague enough the FCC could go anyway with it. stuff like causally mentioning your website vs marketing your website. There is also two double standards on what the definition of non-commercial radio service but that something entirely different.

5 watts out of a pair of AA cells - probably closer to 10 watts drain
on the batteries to get the 5 watts transmit - would limit you to
about 3 or 4 hours of use, so you'd better carry spare batteries.

And in the woods at 450 MHz (most people hike when there are leaves on
the trees, not snow on the ground), the range is even more limited
without a repeater nearby. Over the other side of a decent hill
without a repeater? If it works buy lottery tickets - they'll win.

>short wave radio transmitter/tower?

Absolute dollars, pretty good. ROI, pretty bad. For starters, you're looking at high 6 to 7 figure investment just in plant. Then there are enough regulations to get you in trouble than you can handle without a DC law firm - which is why there are so many large law firms in DC that do nothing but broadcast work.

What do you know about running a broadcast station? Are you licensed or do you have to pay someone who has one? Can you run a board, do production, remotes? Or will you have to pay people who can?

That's on the technical side, and technical employees are cheap. You want listeners, you need recognizable talent - and they don't work for minimum wage.

Unions, anyone? Oh, if you play music, there's AFTRA.

And you'd better have a good maintenance budget, an unlimited supply of funds to replace equipment that goes bad or terrific luck. When something burns out, you can't go off the air for a few days until you can get a new part - you'd better have the spares on hand, and have someone who can swap them out in minutes - 24/7/365. Yes, that means that you pay standby (around 50%) to an engineer, just to be available if you call him.

Getting a bit discouraged yet? I haven't gotten through with even 25% of the negatives. The positives are like what you tell the kid shooting hoops on the corner - IF you make it to the pros, and IF you don't shoot your knees, and IF you last a few years, and IF you're really smart, you just might make some decent money.

Then SuperHurricane comes along and you're a million and a half in the hole.

>2. How does an owner go about establishing a revenue stream from
>potential purchasers of air time.

Advertising. Since it's done mainly by contacts, if you don't have any, you don't have any. And you can't buy 10 years of having been in the business, building a network, without spending 10 years doing it.

>3. Who would the primary customer base be?

Anyone who wants to advertise to your listener base.

>Comments or suggestions?

Raise sheep - you'll make more money, sleep better and live longer. Or build a campground. A few thousand bucks, most of it underground and safe, and you're in business.

Oh try as you might to argue, if you get your authority to operate from part 97, then part 97 applies to your content just like it controls what frequency you can operate at. Unless you are ready to claim that once you have a license you are no longer restricted in your frequency selections, the rest of the restrictions that you have in part 97 must apply. So I can run wide band FM phone on 75 Meters now? I think not.

As un constitutional as it may seem to you this is not a valid argument.

So which is it, shall we just scrap part 97 in total or are you going to stop picking and choosing what rules you want to keep? You cannot have it both ways.

Let me illistrate it this way... Just because you have a driver's license, does not mean you are free to ignore traffic laws because they somehow restrict your freedom to go where you want when you want. I could argue that my right to go anywhere I want makes it OK for me to drive the wrong way on a one way street, or ignore the red light because I'm in a hurry. Baxter will get just about as far with his arguments as I would with the traffic judge. Affirmed fines for all.

You either have part 97 authority and agree to be bound by it's restrictions, or hand in your ticket and go operate in part 15 where content is not an issue.

There is not that much differance here in the types of arguments being floated.. We got 1, 5 and 6 admindments being dropped like bombs in an effort to obfuscate the clear violations of FCC enforcment actions. Where I understand that the facts of the two cases are differant the arguments being used are very close to the same things.

Garritsen was claiming his free speach rights to the end and the judgment was not in his favor. Baxter seems to be making the same claims and will get the same results. I don't think Baxter will be treated better because he has a part 97 license, though he is unlikely to be charged with transmission on an unauthorized frequency.

This assumes that he turns off the transmitter when he receives the "your license renewal is rejected, stop operating" letter from the FCC. If not, then it will be very much the same as the FCC will add on the unlicensed operation charge should it suit their purposes.

Well either Midland lies about them, or no one told the radios then. I use them for 2 12 hour shifts on a set of AA rechargeable, and have never had them die in the middle of a shift. Of course we are not talking for 12 hours to each other. If they were in constant use as in we had nothing better to do than chat all night, I suppose I would have to recharge them a couple times a shift.
We tried them tonight at 5 miles, with me in one building, and the other guy in another building 5 miles apart and we could talk fine. Don't know if the leaves are harder on the transmition than the walls, don't really care as I am not out in the woods with these.
I know little about radios, but from reading this group for years I do get one hell of a laugh out of all the experts though. One says one thing, then someone else with a degree clams that's completely wrong and on and on it goes. The threads about antenna's often have me laughing good.
I know with the old set of these I had, when we were in Mt. Rainer Nation Park talking from car to car, when we could not see the other cars because they were on the other side of woods, those worked great. They claimed 4 watts of power. Now I'm sure some experts here will tell everyone that they can't do that and even have slide rule equations to prove it can't work. For me, I will not tell the radios, as they do not know, so they just work.

He could do all three, build the shortwave station, raise sheep and operate a campground, covering all bases. Buy two transmitters for hot standby, don't have to pay an engineer for standby (although that sounds like a good gig for me! Will you pay my travel?). Hire interns from a local college to run the board and work as on-air talent. Maybe you can get a journalism professor to provide you students who will work cheaply?

The whole point of encryption is so that you, the casual listener,
cannot decrypt it, otherwise it would be a rather pointless exercise.
The noise you hear is the encrypted signal, so being a signal it opens
the squelch. It is possible that they use a different CTCSS between
analog and digital transmissions, our police do, so that may be an
option. Find out what their analog CTCSS tone is and program it in.
(I'm not familiar with the specs of the PRO 2006, so I don't know if
that is possible)

Brad.

" they are many parts of the rules that should be scraped "

Let's say I agree with you, Part 97 needs some work... That still doesn't give you the authority to scrap the parts you don't like or agree with and operate how ever you choose. The same rules that give you authority to operate have to be followed as they are or you risk getting caught and fined. You don't get the rules changed by breaking them, you get in trouble.

The problem with your argument here is that there is a perscribed way of addressing the problems in Part 97 and getting the rules changed. File the request with the FCC, let your voice be heard. If that's not good enough, or you think the FCC is ignoring you for no good reason, then you should call your local members of congress and complain. Make it an election issue, lobby etc until the issue gets resolved. You simply don't have the right to break the law before you have exausted all your other avenues of getting it changed.

Don't give me this sob story of how unfair and bad the FCC is because they fine somebody for breaking the rules, even if you don't agree the rules are fair. If you choose to break the law, you had better be willing to pay the fines perscribed for doing so. After all, the very set of rules you claim to be unconstitutional also grant you the privilage to operate, perscribe fines for those who break them and limit the types and content of your communications when using the privilages they give you.

So.. I won't accept a boo-hoo about Baxter being fined, nor will I accept that the fines are unfair if he broke the rules. If you want to get the rules changed so what Baxter did becomes OK, it is your right to try through the legal means available to you. But let there be *no* mistake; you are bound by the rules of part 97 when you sign your license and don't have authority to oeprate until you have signed it. IF you break them and get caught you should be ready to take the punishment without crying about how unfair things are.

you always have the right the right to break the law, what the
consequences are are another matter but you always have that right and
to state in your trail the law is ilgeal or uncontistitutional you may
prevail you might not

Only when I read your misspelled broken English. My offer still stands, I'll
send you a free dictionary if you promise to use it. Or you can choose to
continue being referred to as a retard.

1128. American Freeband Associatioin Declares Glenn A. Baxter, P.E., K1MAN, is the King of Free Radio

Newsgroup: rec.radio.scanner
Date: 2006-03-31 22:00:14 UTC
From: netmanager2@yahoo.com
Message-ID: <1143842414.563646.232800@u72g2000cwu.googlegroups.com>
Source record: 9508
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.dx,rec.radio.cb,rec.radio.scanner

AMERICAN FREEBAND ASSOCIATION DECLARES K1MAN A FREE TW-WAY RADIO GOD

Glenn A. Baxter, P.E., K1MAN, is the one true leader of all free radio operators in the world. If matters not if you are a CB, FRS, MURS, GMRS or even a hammie. Glenn Baxter, P.E., K1MAN, is dedicated to the understanding that all free tw-way operators are created equal and that they are endowed with certain inalienable rights. Among these are those of life, liberty and freedom to use their radio transmitters in any way that they may desire.

Glenn A. Baxter, P.E., K1MAN, is by any definition known to man a true "god of the tw-way" and must be worshiped for whom he is and what he stands for.

Over the years, our true god leader has shown the world of free tw-way radio operators that he takes no crap from anyone. Daily he places his life and fortune on the line so that free tw-way radio operators can say what they want, where they want and to whom they want without fear that the very corrupt Uncle Charlie will take the hammer to them. Even in the face of Uncle Charlie's might Glenn Baxter, P.E., K1MAN, does not yield one single inch. He has no fear of Uncle Charlie and continually taunts them on the tw-way and on his free radio website at www.k1man.com.

When Uncle Charlie the the big number of $21,000 at him and told him to pay up, Glenn A. Baxter, P.E., K1MAN, stood his ground. He spit right in the old mans eye. He then fired up his foot warmer and brought his radio talk back to the ham radio and dared Uncle Charlie to try to stop him. He is there on the 14.275 on the upper side while Uncle Charlie has run away in total fear of the might of the great Glenn A. Baxter, P.E., K1MAN. Only a true "tw-way radio god" could accomplish this and Glenn A. Baxter, P.E., K1MAN.

Brothers and sisters of the tw-way the time to honor this radio god is now. Fall on your knees before his image. Worship his being today. Pledge you soul to him. It is only by his mystic power that you are even permitted to be on the radio in his presence.

All hail the mystical god of the tw-way Glenn A. Baxter, P.E., K1MAN. He is the light that shall guide us all from the dark.

A. Cannaed Hamm, President
American Freeband Association
Veruth Minneosta, 55424

OK, so the suggestion still stands. The digital transmissions won't have a ctcss tone whereas the analog will, and if he can program the radio to require a tone, it will not pass the digital signals through to the audio.

Don't know, as I said my knowledge of radios and scanners is pretty limited.
All I "know" is what I experience. Reading this group often has be more
confused than when I started. The antenna threads are some of the best. I
had at one time though about getting some kind of a roof antenna for the
house, but after reading through many threads here on them never bothered.
You get a whole lot of tech talk, with some saying what will work, while
others say the same thing will not work and why. <shrug>

Hi Ron!

In my opinion, even if you received it, you would be getting ripped off! Scanning USA is an inferior magazine when compared to Monitoring Times, and Popular Communications.

Added to that, they printed an editorial not too long ago that basically implied if their customers bitch about their subscriptions being late, they'd just as soon not do business with them. They truly have an inflated opinion of themselves, and their publication.

If you used your charge card to pay, call them up, and retract your payment.

Bill Crocker

The last RadioShack I went to, (this is a good story, really!), the
"kid" working there took a new scanner that a customer puchased and
hooked it up to the store's PC. Loaded all the local freqs including
TRUNKING freqs in a minute or two.

Blew my socks off - I'd have guessed a 17 year old would have sold the
scanner and said, "have a nice day".

Made me think of even buying a new scanner...

But you don't mind sharing your opinion with others. Others who know
less than you do, and may actually accept your opinion as being worth
something - then waste their money.

You're correct though - no one should accept what they read on the
internet as being worth more than the pixels it's made of - you proved
that.

ROTFLMAO!!
Touched a nerve there huh? Well I'm sure your Mom is still impressed with
you Al. You just keep telling the world how smart you are, after all you
believe it. It's a shame if anyone spends money on what I use only to find
out it works, while you being much smarter can tell them why what they have
should not work.

If you go with GMRS radios, and plan to use them with a repeater, make sure the radios support that function. It requires you to transmit on one frequency, and receive on another. Many repeaters also require CTCSS, or possibly DCS capability as well.

Most of the "bubble pack" radios do not work with repeaters. Look for deals on used Motorola, Kenwood, etc.

Dear Bill Crocker:

I saw that article recently about complaints of Scanning USA being receiving late, Your article is compared to the now defunct Scanner Association of North America, I believe they are a 'fraud' up to this very day. Remember that organization? I think that the editor of Scanning USA should be investigated by the state Attorney General's office, the Better Business Bureau and the Postal Inspector.

why? why should cbers reamin silent?

are you afraid of them?

1175. Question about morse code broadcasts

Newsgroup: rec.radio.scanner
Date: 2006-04-05 02:14:19 UTC
From: Dave <catx@pacbell.net>
Message-ID: <%JFYf.8465$4L1.6714@newssvr11.news.prodigy.com>
Source record: 9555

Hi,

I'm a born again scanner user. I dig out my stuff every few years, dust it off, and then realize how much I forgot or notice that my rigs are becoming outdated (I still have some scanners that use crystals).

Sometimes while scanning, a transmission is broadcast as a series of Morse code tones. There is no human traffic with these.

I believe they are identifiers for a particular base station or ?

Is there a device that I could buy that could decipher these codes into text. Years ago a buddy made one (circa 1989). I thought it was pretty cool being able to read these broadcasted reports.

Thanks for any and all help,
Dave

where are you hearing them at VHF and UHF FM in ham bands they well be
an id for the repater which will be sent out depneding on the
programing of the controller

MFJenterprises.com I belive is the link has a severla level of unit
that will tranlate code esp well sent machine code like you are likely
hearing but the messages likely read basicaly "kb9rqz" or what ever
the call leter of the repeater owner call letters

Some Police Depts. still use them to broadcast their call letters at various
scheduled times, as was required by the FCC. In the old days the dispatcher
had to recite the call letters at least once an hour. vocally.

why would I know? I am in Michigan, at 42 most folks don't call me a
geezer. the weather hereis slowly melting the snow and ice but seeing
large section of yard finaly

that's nice, Spring is here.

p.s. finally has two "L"s.

that may be where Hughes downlinks it although I thought is was
somewhere in TX

given that I use satelite interent where the downlink is has nothing to
due with where I am

I know I will probably get flamed for this but, just learn the Morse code.
It might be an antiquated and outdated mode of communications but it's still
interesting and fun to be able to tell your friends what is being sent.
Just my .02 worth

in the early 90's there was a program you installed on ur computer,
Then Connected the radio reciever Speaker to the MIC input on your
computers Sound card and it put the TEXT of the code on your computer
screen,
No need to build a Decorder .
I forget what the name of the program was !

1212. TrunkPCR Version 0.7.188 is Now Available

Newsgroup: rec.radio.scanner
Date: 2006-04-05 20:04:25 UTC
From: CrazyC <crazy__c_@hot_mail.com>
Message-ID: <cpVYf.8825$t22.2469@dukeread08>
Source record: 9592

TrunkPCR Version 0.7.188 is Now Available for downloading from the homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

TrunkPCR works with the Icom PCR-100, PCR-1000 and PC/R-1500 line of radios
on Windows based PC's...

This update has a few chages:
Mar 22,2006 - -----: Group/Radio ID Counts in Trunk Info verified before
updating.
Mar 29,2006 - -----: Loss of Data using 2nd Receiver now shows message in
Status Bar.
April 04,2006 - -----: Squelch Indicator Updates when Changed.

Version 0.7.188 Released 04/04/2006

Regards,
Jay

>
> I could use some help but the kind that would realy work (a gun) would

You are too much of a pussy to have a gun, MARKIE.

> have legal drawbacks that outweight the advantages

Markie uses direcpc.com as an ISP:

dpc691914029.direcpc.com (69.19.14.29)

69.19.0.0 - 69.19.127.255
Hughes Network Systems
11717 Exploration Lane
DirecWAY Network Management Center
attn: Network Security Manager

Germantown, MD
US

Network Security Manager
abuse@direcpc.com
+1-301-601-7205

They are unaware of the extent of his spamming. For now, that is.
<snicker>

My local area PD broadcasts their callsign every so often in very fast Morse
code. That's the only Morse code I ever hear on my scanner.

Jackie

I found it kind of fun to learn Morse when I was studying for my General amateur radio license. Once I got on the air, I used it occasionally, but I must admit I found it hard to carry on a conversation for very long in Morse. I was more into chasing DX while I was active, doing "search and pounce" during many contests. I found that many, if not most contesters using Morse code now use computerized sending software, which is something I never had the chance to try out.

Once I moved and had to go "off the air" due to antenna restrictions, I still listened to the CW areas of amateur radio bands in order to keep up my comprehension. One thing I like is trying to pick up beacons on 10 meters. I have nabbed a number of QSL cards by submitting beacon reports to their owners, including one as far away from me as Hawaii (I live in the Midwest).

So go ahead and learn Morse if you think you would have fun with it. Sure, it's something of an anachronism these days, but as long as people are still using it, why not learn a new skill so you can at least know what they are dit-dah'ing about? :-)

Have fun,

Jackie

Go here and pick out one of the free programs. Some will do other codes
becides CW and may be beter for your system. I don't have any special one
to recommend for CW.

Message-ID: <1144298147.047730.199690@i40g2000cwc.googlegroups.com>
Source record: 9420

Just recently purchased a Pro-2006 with the full Optoscan 456
installed. I've owned many scanners in the past, AR8000, Yupi MVT-7100,
but this is my first PC controlled radio.

Qustion #1: Whats the best overall software? I'm looking for
Import/Export functions, time stamped remote recording direct to hard
drive. Looking at Probe V7, but will it work with Windows XP? Can I
download a trial version of Probe? Is there any other, more modern
software out there?

Question#2: What kind of digital signals can I receive? This Pro-2006
has a discriminator output. Will I need a converter? I would love to
decode some satellite transmissions.

Question #3: What's the best overall antenna? So far I'm leaning toward
a Diamond Discone.

I would appreciate any helpful info.

73's John in San Antonio TX..

>Question#2: What kind of digital signals can I receive? This Pro-2006
>has a discriminator output. Will I need a converter? I would love to
>decode some satellite transmissions.

Many satellite transmissions aren't digital, they're plain old analog
voice. Most of the rest are encrypted, so you can't do anything with
them. The remaining ones can be almost any mode. Amateur radio stuff
is easily decoded, as is WeFax.

>Question #3: What's the best overall antenna?

For what frequency and use? Satellite? 800 MHz? VHF-lo?

> So far I'm leaning toward a Diamond Discone.

The only "best" about a discone is that it matches the cable for a
pretty wide frequency range - up to 4:1 if designed properly (although
they usually don't make it for more than a 3:1 range). 30 MHz to 3
GHz? That's advertising hype, not reality.

No one can tell you what antenna will do what *you* need done best
until you tell us what you need done. Frequency and elevation
(terrestrial or satellite), mainly. Also what kind of range are you
looking for? Something realistic, or an 850 MHz base station 120
miles away? (Which can be done if you have enough money, but there
are many new cars that cost less.)

Source record: 9426

I understand some of the Pro-2004s have a problem with
`cold solder joints' which causes the 9 volt backup
battery to quickly dissipate - (3-weeks life).

Does anyone know more about this? If so, which parts of
the circuit boards are the problem. Any diagrams, photos,
etc...would be helpful.

I like the scanner's coverage, but I am going to trash it
unless I can fix it.

Bill, KC0IZI

Was wondering if anybody has ever experienced, and fixed, a problem with the backlighting on the Uniden BCT-7. I have 3 different units that experience the same problem. Random backlighting. It works most of the time, but not all of the time. It seems to be temperature sensitive. When the radio is in a warm environment (in the house, in the car after the interior warms up,etc.) the backlight stops working. Sometimes it flashes erratically, almost like a loose or bad connection. I'm guessing possibly a bad solder joint, or stressed solder joint that has cracked. I've yet to find the problem area in any of the three units I have however...

Anybody ever fix this problem, or even have it happen to them at least? Since all three of mine have the same problem, I'm guessing it's fairly common, and someone should know what the most common culprit is...

Any help is appreciated!
THANKS!

That's usually caused by a defective voltage regulator, IC9. Join the group at http://groups.yahoo.com/group/PRO-2004/ and browse the messages and files. If you can't repair it, try putting it up for auction on Ebay as a 'for parts only' listing.

There should be a PC/IF jack on the side of the radio. If something is plugged in to it, remove the plug. If not, the jack is stuck open and you may be able to clear it by plugging and unplugging a 1/8" phone plug several times.

Okay, I'll make it plainer:

There's still plenty of serious Morse traffic on the air. Of course
if you can't copy 20 and up you won't know what it is, so you'll think
it's not serious.

My friend Noah, an ex-military intercept operator who can copy 35wpm+,
says the amount of non-hobby Morse on HF these days is vanishingly
small. Perhaps you could share with the group the type of serious Morse
you're referring to.

Oh clever... Posting WhoIS output in an attempt to silence folks who may not agree with you. What's next, ad hominem attacks, straw man arguments, and intimidation attempts?

Could it be that there is no more substance to your side of the debate so you are reduced to trying to throw rocks via TCP/IP? Going to break out the hacking scripts like good little script kiddies?

I suppose this should be expected, after all that's the "MO" of Mr. Baxter. Ratchet up threats in hopes of driving off the voice of reason. Sorry, I'm not impressed.

Got any substance to go with all this fluff?

Oh how do you do it? Google? Yahoo?

Once again, I'm not impressed...

Oh.. One more thing...Because you haven't fully exercised all your internet search options.. I'm not a "no code tech." Never have been one actually. But you would have known that if you where smart enough.

And I suppose you are an Extra Class of 40 years working as a communications lawyer who is a retired FCC employee? No? Ahh don't cry about it, I wouldn't really care if you where either.

And in case you don't notice the sarcasm in my post, I'm only slightly amused, but I sure can tell a joke from serious worth while poster.

I'm not laughing out loud, but there IS a smile on my face.

Well sir, If that's what you really think about me and my few posts on this subject, I guess I'll just have to go away hurt and confused....

Oh.. This is so unfair! I give up! Uncle!

But the fact that K1MAN now owes the FCC $21K for breaking the rules of part 97 won't go away anytime soon. Altough it does seem that his license will.

Have a nice day, life, whatever. I'll be clear on your final, that's for sure..

Want to bet, Marky, It's being seen to that you get all your internet
acess terminated.

> BTW you would need to change nick as often if you pruned your threads a

You wouldn't have to change yours if you would stop spamming, AIDS boy
Marky.

Yet, broadcasting is part of the NAL under discussion here.

Part 97 makes it very clear what broadcasting is if you will read it
for what it says and not try to parse it to confuse and obfuscate the
meaning.

True, not *all* broadcasting (one way transmissions) are disallowed,
some are specificially allowed. However, looking at the NAL and now
the affirmation of said NAL, it's clear that somebody has a lot of good
evidende that what was transmitted constituted broadcasting.

If you wish to "broadcast" outside of what is allowed in part 97, you
need to operate under some other part of the FCC's regulations if you
insist on going the RF route.

Perhaps a CB or Part 15 would suit you!

Serious question:

Just how much power is the maximum permitted level of
250 uV/m at 3 meters for non-licensed devices?

(FM broadcast band?) See this NAL for reference:
http://www.fcc.gov/eb/FieldNotices/2003/DOC-264733A1.html

Correction ..... 0.01875 microwatts for 88-108 mhz fm

1303. BCD 996T Vs BCT15 ?

Newsgroup: rec.radio.scanner
Date: 2006-04-08 14:02:02 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <AMOdne3qkcLMX6rZRVn-og@comcast.com>
Source record: 9383

Hi,

New at this.

Thought I'd get a BCD 996T when they come out, which should be shortly, I guess.

But, have just seen a mention and pix of a BCT 15 also coming out shortly. From what was described, seem about the same.

But I realize that I'm too new at this to really understand the major differences between, but the BCT15 was shown at a much lower cost. Would hate to buy one, and be sorry sorry shortly afterwards that I didn't go with the other.

Might anyone please summarize the primary differences between them for me ?

Which one has all the bells and whistles, and what would I Not be getting relative to one over the other model ?

Much thanks,
B.

The BCD996T decodes APCO-25 Digital, the BCT15 does not. That is the main difference.

Bill Crocker

You are comparing essentially apples and oranges. 250 UV/m is a power
density measurement that is different from actual power supplied to
the antenna. What the FCC is specifying is a field power density at a
specific distance from the antenna. This is often specified in
commercial services like that of FM broadcst. There is no actual power
out specification like in CB or Land Mobile, but a power density at a
distance. So depending on the efficiency and gain of the antenna
system, will determine how much actual power is needed by the
transmitter to yield 250uV/m at 3 meters.

There are formulae to calculate the power density from know variables
such as transmitter power, cable losses, antenna gain, antenna hiegth,
frequency of operation and distance from the antenna. Once you know
the variables it is simple plug and chug to get the answers.

BCD (for digital) 996T does ... well, digital. BCT 15 doesn't do
digital.

Are we talking 1 or .1 watts to a 1/4 wave GP or 1/2 dipole.

Much less than that--do the math:

250 uV/m is a power density of 1.66 x 10^-10 w/m. (P= E^2/R and R for
free space is 376.7 ohms).

A sphere with a radius of 3 meters has a surface area of 113.1 meters.
Multiplying this by the power density gives .019 microwatts, which if
applied to an isotropic antenna (if such an animal existed) would give the
specified level. Since a dipole has a gain of 2.1 db (1.64) compared to
an isotropic reference, an input power of .011 microwatts to a dipole
would result in the same field strength.

Bob, N7XY

This should have been 1.66 X 10^01 w/m^2.

>

Which should have been 113.1 square meters.

That is probably true. Other than CB and FRS, etc., unlicensed devices
(typically under Part 15 of the FCC regulations) are only intended for
short-range use, to minimize interference with licensed operation.

Hi Mike

Milford Ct. Local PD here uses encrypted digital so all
I hear on the scanner is the computer noise on their frequencies. I see some
expensive Uniden scanners that mention they are "APCO P-25 digital" capable.
I wonder what that is?

opps hit send too soon....

Any Digital scanner which is capable of working on the
APCO 25 hybrid system will do

though you will need some info on the system channel setup as you need to
detect which is the control channel
but it is not hard

There are no scanners available in the U.S. they will scan, and decode
"encrypted" digital. APCO-25 digital, yes, but not if its encrypted.

Bill Crocker

That would depend on how bad your breath was. ;-)

It's also about receiving too. Bigger antenna is better.

Just because it's digital modulation doesn't mean it's encrypted.

If people would do a bit of research, they'd see that.

No wonder you are just a no code tech, Markie. Your ignorance of radio
propagation was just shown in that idiotic statement.

A digital scanner will receive digital signals. No scanner will
receive encrypted signals, which it's illegal to even try to receive,
anyway.

Milford's 460 stuff is encrypted, 1 channel APCO, 1 analog, so you
won't receive anything. You should be able to receive detectives on
155.13.

As usual, Lardass, you fucked it up. You can't photoshop worth a shit.
But then you can't do anything worth a shit, you are worthless.

How about this picture, it's the one you love so well, now gobble up,
fatty:
http://h1.ripway.com/lloyddaviessux/lloyd_makes_woger_sounds.jpg

It shows you look like a 75 year old man since you lost your hair
before you were 21!
http://h1.ripway.com/lloyddaviessux/lloyd_jams_finger_up_his_ass.jpg

A question for the group...

What is the favored weather radio for bugout and emergency situations?

Thanks

I doubt that there is one "favored" model, but here's my $.02:

I keep a Midland SAME weather radio (model WR-300) at home. For travel, handheld scanners that cover police/EMS freqs as well as NOAA wather channels are useful if you're so inclined. Also several amateur radio handhelds (can only be used for transmitting if you're a licensed radio amateur) cover NOAA weather channels. FRS/GMRS walkie-talkies sometimes include weather channels as well.

BTW, if you're not already a license amateur radio operator (ham), consider getting your license. The Technician class (no Morse code knowledge required) can be obtained by successfully passing a written 35 question exam, and allows local communications via simples or using repeaters for more coverage. A very useful tool for survival situations when the grid goes down, and a fun hobby, too.

They don't work where I live. And over in VA (Harrisonburg to be exact),
they only work in spotty locations. IMO, a complete waste of money if you
live anywhere in the mountains.

Most scanners made in the past 30 years will receive the NWS
broadcasts, and the newer ones will alert on SAME broadcasts. I use
my BCD396T if necessary.

I have an Oregon Scientific WR196T (no longer made). Nice radio if
you don't need to use it on batteries; it would use less power if
it had vacuum tubes.

If possible, find one that will let you select not only by warning
area but also by warning type. I shut mine off permanently when I
was awakened twice in the early hours by a WATCH that was never
alerted when it first came out and I was awake. Nowadays you'd also
have to shut out the "amber alerts".

My main weather radios are:

1. Yaesu VX5R handheld transceiver (a basic amateur radio license required
if you're going to use it to talk as well as listen); and
2. Radio Shack Pro-95 scanner. This has an alert function that sounds an
alarm if a weather emergency is spotted in my area.

You should really try to stay out of the threads where you haven't got a
clue about the subject everyone is talking about. Basically for you, that
would mean any thread related to radio. Then you won't get laughed at as
much. Of course, they're all still going to laugh at your spelling and
grammer, but there is nothing you can do about that.

Happy to Help.

There are three programs that I know of, they work with live fed audio
through your sound card, however, I don't which, if any of them, are capable
converting sound files stored locally...

Will post them up to Alt.Binaries.Radio-Scanner Give them a try, I'm sure
at least one of them must be capable...

I have an Eton FR300.

xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

All-in-one self-powered radio

eton FR300
AM/FM Radio with NOAA, TV-VHF, Flashlight and Cell-Phone Charger

This all-in-one unit offers functionality and versatility that makes it
ideal for emergencies. The FR300 provides you with radio, light, and cell
phone battery life when you need it most. The Hand-Crank Power Generator
charges the internal rechargeable Ni-MH battery pack. With the NOAA weather
channels and TV-VHF channels, you can find weather forecasts or listen to TV
shows when you're away from the set. Available in: Orange, Red, Black, Blue,
Silver

xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

I kind of like it.

Guy

One of the Grundig or Kaito hand crank AM/FM/Shortwave radios. I've found the local all news station to be far more up to date on forecasted weather and at least equal to radio originated tornado warnings. And the voice over radio is far more pleasant than the annoying mechanical voice of the NWS broadcast.

It depends on where I am at the time.... both of my trucks have HF and dual band (VHF/UHF) HAM radios, as does the house. They all work, and there is usually at least one on almost all the time. If the sky looks nasty and/or there is threatening weather forcasted(I check the Weather Channel at least twice daily), I run the dual banders on scan with the local repeaters programmed in, and turn the HF to either the 40m or 75m severe weather net frequencies.

most of the weather radio specs say something like they only guarantee the
digital SAME code to be accurately decoded 90 percent of the time.
With that in mind i would use a non SAME weather alert radio as my fall back
survival radio. The one that alarms on anything.

I have found that the NWS broadcasts are MUCH more detailed with the information I need.

Most news stations have LOTS of talk and LITTLE information in my experience....when I turn my radio on in an emergency situation I want to hear information NOW to conserve power and time.

Research to find out if the system is definitely encrypted or not. If the signal is encrypted you will still hear a signal but will not be able to hear the conversation as there isno way for a normal scanner (capable of digital or not) to decrypt comms that have been encrypted. If the system is NOT encrypted and uses APCO 25 then there are several scanners that are capable of listening to the comms.

Matt

It's long been the rule that during a life-or-death emergency that any
person can use any frequency, any mode of transmission on any radio.
Transmitting for anything less than a life-or-death emergency is not legal.

When I think of extended receive I think of a radio I can use to listen to AM on the aircraft bands at a minimum. For others it might mean the ability to listen to FM broadcasting or SSB on 20meters (a la the Kenwood TH-F6A and others).

The best site I found for reviews is (by far) http://www.eham.net/.
Lot's of good quality reviews... A while ago I ended up getting a
Kenwood TH-F6 tri-bander based on the reviews. A little expensive, but
it seems like a good radio, but I really can't compare. It has a load
of features, that's for sure. I thought it would be good to have some
sort of alternate commmunication if there is an earthquake or some
other sort of disaster.

I tried a CB first, but there is *no one* using CB around here. I
thought there would be at least a few truckers or something.

I don't have a license or anything, so I've just used it to listen. I
should get a license and join up with one of the emergency
communications clubs or something, but never seem to get around to it.

Depending on your plans, you might want to get a scanner, instead.

http://www2.oregonscientific.com/shop/product.asp?cid=2&scid=6&pid=241

I have this . Got it from Marlboro for killing myself. (survivalism of the finest).

Not a bad set on the cheap.

Thomas

North and south freeways in So Cal use Chan 15, east and west use Chan
17 or 19 for CB

North of Burbank..its 15 to hiway 46..changes to 17

Hiway 14 to Palmdale Lancaster..the commuters use 12

I use mine just about every day in your AO

Too bad that Tecsun (Grundig) won't put a weather band on one of their crank radios. I'd think that if you live in a place where you need split second weather warnings (like Tornado Alley) that a dedicated weather radio would be better. I have a Midland WR-100 that can supposedly run on batteries, but I'd think that it would eat them quite vigorously. I rarely use it anyway, because California just doesn't have the kind of nasty weather that requires anything more than the nightly TV news weather report. California has earthquakes and floods and fires, but since those aren't directly weather related a weather radio does little to help. I keep a cheap Rat Shack AM/FM portable by my bed for most stuff, and a Degen 1102 ready to evacuate with if I have to. Most of the hurricane evacuees didn't have portable radios at the ready, and that caused a lot of frustration. If you're evacuated and stuck in a HS gym or community center with a lot of other people, having a working portable radio could make you the one eyed man in the land of the blind.

Huimmm..I was browsing through my Secret Stash of Stuff..and found an
old but minty Bendix radio..has AM, IRRC FM, and Marine band, with the
direction finding loop on the top. A commercial piece, elderly of
course, but it works just hunky dory.

Anyone got any interest in it? Trade for?

Well, I got a Cougar bland one of those. Still with the instruction
booklet - which is all in Japanese.

Hmmm, now what I need to do is find me a Horizontal Japanese dictionary
& language tutor.

cheers

I'm asking because the OP said they wanted a 2m HT with extended receive, and in order to help him/her I wanted to know what they meant by "extended receive". There is a significant difference between a receiver that covers 144-174 Mhz (NB FM only) and one that covers from the AM broadcast band to 1.2Ghz.

However, since the OP apparently treats Usenet as a write-only medium I guess we won't be able to help them.

Yes and no. SWMBO and I have worked any number of emergency nets. Normally, participants ID and are called by call sign so, in those cases, yes. OTOH we would certainly respond to anyone in a true emergency where there was a valid threat to life or even property.

I wonder if mine's defective, then. Or maybe it's not set up correctly.
I really should read the instructions...

I've tried channels 1--40, and *rarely* hear anything. I heard one
conversation, once, several months ago. Last weekend I was in Exiter,
by Bakersfield, and got nothing, again. 1--40 were all dead as far as I
could tell.

Since the range on CB, without hanging a lot of metal in the sky, is
only a few miles, what's going on even in the next town may not have
anything to do with where you are.

On the east coast, I can drive hundreds of miles on I-95 (the
equivalent of I-5 here) and hear nothing on CB unless the traffic jams
up. Then they come out of the woodwork.

Probe 7.0 is GREAT.....running it as we speak.....but my opinion
forget XP , get an get around a 150 - 300 mhz laptop , runs fantastic
with Win 98 and ME , I've used both 98 on a Gateway 2000 laptop and ME
with an IBM 390E with flying colors....LOVE PROBE , set it up with
your sound card for the alarms and all , WELL WORTH IT....The speed I
suggested I know they are old but Probe works beautiful around that
neighborhood....I have ran Probe with XP (Both 2006/Full 456 and 2042/
Full 0535) but you have to change things like speed and decoding
seconds and all that or it will miss way more than I think you want to
deal with......if you must try XP , advice .....get DIRECT I/O , your
gonna need it.....oh and Probe is "logging heaven"...big plus in my
book , decodes ACCURATELY also.......good luck.

Hi,

Was wondering if anyone has any experience using the "Premium" Thomas &
Betts, Black, "UV-Resistant"
nylon tie wraps out of doors ?

e.g., do they become brittle after a fer years due to very cold temps, or UV
?

Or, do they really hold up well, etc. ?

Thanks,
Bob

I'd like that. Now that I think about it more, the weather channels all work fine, it's just that I very rarely pick up any conversations on chanels 1--40. So I'm assuming it receives fine. It would be good to try it out with another CB and see if I can pick them from the same room.

You don't need a diploma to know that while the former may be a fact,
the latter is just an opinion.

--
Noah, who thinks that polishing is a sign of respect for your readers.

I never said otherwise

the NG is not worth the time for polish , sure it is an opion but look
at the place most of the content for year has 2 or 3 people calling
everyone retarded or alfficted with STD's or child moestors or just
plain rapist

if the NG want me to spend more time polishing it need to merit that
treament in the judgent of those it is asking to do the work

you for example are not even willing to sign you name to your stuff

I have had some [the ones with the stainless locking insert -- I'm not sure if they make an all-nylon version] holding a rotor cable to a steel pipe mast for at least 8 years now with no signs of aging [eastern PA]. Brand-x white ones in similar conditions have turned quite brittle in much less time.

any antenna's usefullness will be based upon it's intended use. If you need all three bands , and you are going to use them, then by all means, go for the triband. Just be aware that the more bands the antenna covers, the more sacrifices in performance on any one band have to be made in order for it to function well. This is inherent in basic antenna design.

First drafts? How many drafts does it take to polish up sentence or a
phrase? LOL

If you're going to say something, why not say it in a manner where what
you have to say will be understood by those that read it?

K1MAN/AARA/IARN WILL NOT PAY $21,000 FCC FINE - DEMANDS JURY TRIAL

1. The FCC has declined to provide a requested hearing, and the Fifth Amendment to the United States Constitution requires a hearing and due process of law before they can collect a dime much less the "ORDERED" "fine" of $21,000. Even a traffic ticket gets a hearing, right?

2. Therefore, the next step for the FCC, by statute, is to now sue K1MAN for the claimed $21,000 in Federal District Court in Bangor, Maine where K1MAN would demand a trial by jury (trial de novo), subpoena witnesses (Hollingsworth, Boston Office Engineers, hams, etc.), file motions, etc. The FCC can't even bring such a suit, of course, because the minimum claim in Federal District Court is $50,000.

3. By statute, unresolved forfeiture matters such as above cannot be used in any other FCC proceeding such as K1MAN's pending renewal application.

4. By statute, K1MAN can and will continue to operate until the renewal application is finally decided including all appeals to the D.C. Court of Appeals and the U.S. Supreme Court.

Bottom line is that the FCC is blowing phony legal smoke leading to Hollingsworth's 2006 Dayton "Special Achievement Award" which is not too bad for a guy who was sick on the day they taught law at law school. Wake Forest Law School should refund all of his hard earned money! Good luck in the contest!

73 and GL de K1MAN

I'm looking at small portable police/emergency scanners and the Bearcat
series seem to be at the top of everyone's list.
Is there anything that competes with the Uniden Bearcat BC72xlt?
What about the 92xlt? Is there a big difference between the two?

The k1man legal team had already taken that under
advisement. However, the commission has made an
irrevocable error. Stay tuned.

PCR Remote - Beta is Now Available for downloading from the homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

The Server and Remote software allows you to control your Icom PCR-100,
PCR-1000 and PCR-1500 over the internet.
Using Audio Brodcast software such as SHOUTcast, Pirate Radio Broadcaster or
Windows Media Encoder will enable you to hear your radio from a remote
location over the internet...

Regards,
Jay

IC W32A, it contains enough memory to add all the 2 meter repeaters
and common simplex frequencies, and can monitor all the weather radio
stations, and, as a bonus, operates on 70 cm as well.

Don't forget to have a copy of your amateur radio license...
Buck

I found it interesting that just before Hurricane Katrina (well, two days before), the Radio Shack's, in New Orleans still had lots of stock of Grundig crank radios left. Now, I know there are more essential things, but when you're sitting in a shelter for four weeks, that Weather band/AM/FM/TV-audio/Cell phone charger/LED flashlight radio might come in handy.

If you have sound forge or something with an amplitude mod
filter, you can modulate at 3000hz then filter the result
from 3000 - 20000 and that will give you back the clear
speech.

Oops, I meant filter OUT 3000-20000. Keep the content that
is below 3000hz only.

> course, because the minimum claim in Federal District Court is
> $50,000.

But they do have the legal right to collect this money or a lot of folks who have gone before would have tried this approach. It won't work. Others have paid fines to the FCC for less blatant violations of the rules. Best get a good lawyer and start collecting the money from the change jar, bank accounts, car ash tray etc. Somebody is going to have to come up with $21k. As noted by others, this 50K limit does not apply to this case, but have fun using this defence in court. I can hear it now, "Objection over-ruled! Sit down Mr Baxter!"

A jury trial would be fun to watch, but there would be no doubt about the outcome if Baxter chooses to continue to represent himself. I'm sure a jury of his peers would understand the part 97 rules and how they where broken.

> 3. By statute, unresolved forfeiture matters such as above cannot be
> used in any other FCC proceeding such as K1MAN's pending renewal
> application.

>From my perspective this does not apply in this case any more. The FO pretty much resolves this issue so the FCC *can* use this enforcement issue to deny the pending renewal application, paid or not. However, that need not be the reason used to deny the renewal. I'm sure they have other things they can use to justify a denial if they wanted to. All they need to do is dust off some different violations for which they have collected evidence and voila, application denied. The don't even need a rules violation, just a determination that he would be unfit. Now that's a tough argument.. :)

> 4. By statute, K1MAN can and will continue to operate until the
> renewal application is finally decided including all appeals to the
> D.C. Court of Appeals and the U.S. Supreme Court.

I would not try to operate after the application is denied. Once K1MAN gets the "you no longer have authority to operate" letter from the FCC, he'd best stop. Of course the FCC is well within their rights to keep the application in pending status as long as they choose. The denial may come out today, or may take years. I think it will be sooner rather than later, but I give it a few months yet before they deny the renewal. I'm sure they plan to be totally sure he's not going to pay the fine before they deny the application so any time after the end of the month.

Unless Baxter wants to just loose $21k to help fund the FCC, I would suggest that he contact them through a competent lawyer and seek some sort of settlement terms. Perhaps a life time ban from Part 97 operations, liquidation of all his part 97 capable equipment, promise to not seek a future license while the FCC forgoes the collection of the fines. But hey, it may be to late for even that. I'd bet the FCC has him dead to rights on this fine, he will loose his renewal bid, pay the fine and then who knows what he will do? I'm guessing here, but I'll bet the FCC would agree to him going willingly into part 15 operations and forget the fine under the right conditions.

Based upon is rhetoric it seems that he will be dragged kicking and screaming from his shack and off to jail, while his equipment is confiscated. One can only hope that this is rhetoric and that at some point he will "come to his senses" and give up.

And how would you justify that position?

Care to have a thinking debate or are you going to continue to post flames?

Seems to me that a Forfeiture Order is sort of final from the FCC's perspective. Pay up or face the DOJ in court when they attempt to collect the fine.

An you don't think that the FCC will simply renew his license do you?

that is what I would advise themto dosince they are not likely to
collect the money without spending 10 times as much

OTOH the FCC may brazen this out

USS Eisenhower COMPTUEX Roster and Freq Listing 06-04-18

The following listing contains what I have heard from USS Eisenhower aircraft for the past couple of days. I have incorporated designations and information that Mike Comer provided in his logs to try to get a complete listing-to-date that we can work from. I also heard other USN aircraft during this period, which I have NOT included here, because I cannot be sure that they were related to the USS Eisenhower COMPTUEX. I might add them later.
You will notice the callsign "Singer" listed for the VAQ-140 EA-6Bs, in addition to "Stinger 02.". The VAQ-140 pilots were very clearly saying "Singer" and not "Stinger." Also, the VAQ-140 aircraft have been logged before as using the "Singer" callsign. I will continue to monitor both callsigns carefully, but for now I am sticking with "Singer" when used, and "Stinger" when used.

Hi all my name is Lino morales, and I've been into scanners since 1994.
I currently own a BC 80 XLT. Hope to meet some new scanner inthusiasts
here. Take care and God bless.

Again, Mark I ask that you please stop changing your screen
nic to by pass newsgroup filters. As you can see it is clearly against
your TOS:

6.1 PROHIBITED CONDUCT.
You agree not to use the Service as follows: (a) for any unlawful, improper
or criminal purpose or activity; (b) to post or transmit information or
communications that, whether explicitly stated, implied, or suggested
through use of symbols, are libelous, defamatory, invasive of another person's
privacy, obscene, indecent, pornographic, sadistic, cruel, or racist in
content, or of a sexually explicit or graphic nature; or which espouses,
promotes or incites bigotry, hatred or racism; or which might be legally
actionable for any reason; (c) hurts minors in any way; (d) forge headers or
otherwise manipulate identifiers in order to disguise the origin of any
content transmitted through the Service; (e) intentionally or
unintentionally violate any applicable local, provincial, state, national or
international law, including, but not limited to, rules, orders and
regulations having the force of law; (f) to attempt to access or access the
accounts of others, to spoof or attempt to spoof the URL or DNS address, or
to attempt to penetrate or penetrate our security measures or other
entities' systems ("hacking") whether or not the intrusion results in
corruption or loss of data; (g) to bombard individuals or newsgroups with
uninvited communications, data or information, or other similar activities,
including but not limited to "spamming", "flaming" or denial or distributed
denial of service attacks; (h) to transmit unsolicited voluminous emails
(for example, spamming) or to intercept, interfere with or redirect email
intended for third parties using the Service; (i) to introduce viruses,
worms, harmful code and/or Trojan horses on the Internet; (j) to post
information on newsgroups which is not in the topic area of the newsgroup;
(k) to interfere with another person's usage or enjoyment of the Internet or
this Service; (l) to post or transmit information or communications that are
defamatory, fraudulent, obscene or deceptive, including but not limited to

scams such as "make-money-fast" schemes or "pyramid/chain" letters; (m) to damage the name or reputation of HughesNet, DIRECTV, HUGHES, or any of their respective parents, affiliates and subsidiaries, or any third parties; (n) to transmit confidential or proprietary information, except solely at your own risk; (o) to violate our or any third party's copyright, trademark, proprietary or other intellectual property rights, including trade secret rights; (p) to generate excessive amounts (as determined in our sole discretion) of Internet traffic, or to disrupt net user groups or email use by others; (q) to engage in activities designed to or having the effect of degrading or denying Service to HughesNet users or others (including activities that compromise a server, router, circuit or software; (r) to use any name or mark of HughesNet, DIRECTV, HUGHES, or their respective parents, affiliates or subsidiaries, as a hypertext link to any Web site or in any advertising publicity or other commercial manner; (s) to use your HughesNet account for the purpose of operating a server of any type; (t) to use the Service or the Internet in a manner intended to threaten, harass, or intimidate others; (u) to cause the screen to "scroll" faster than other subscribers or users are able to type to it, or any action that has a similar disruptive effect, on or through the Service; (v) to use the Service to disrupt the normal flow of online dialogue, (w) to use the Service to violate any operating rule, policy or guideline of any other online services provider or interactive service; (x) to attempt to subvert or to aid third parties to subvert, the security of any computer facility or system connected to the Internet; (y) to impersonate any person or using a false name while using the Service; (z) to install "auto-responders," "cancel-bots" or similar automated or manual routines which generate excessive amounts of net traffic, or disrupt net user groups or email use by others; (aa) to make false or unverified complaints against any HughesNet subscriber, or otherwise abusing any of our complaint response procedures; (bb) to export software or any information in violation of US export laws; or (cc) to use the Service in contravention of the limitations of the pricing plan you have chosen

I don't
I do so in order to deal with the fact I am the one under attack mostly
by Roger Wisemen, and Steven J Robeson

DiretPC and I have discussed the matter they agree I am not in
violation of ToS by taking defensive action to deal with somebody elses
flame war

you just see some the slosh from the real site which is RRAP mostly
you don't want to read that gruop I suspect but if you can just dl the
recent title you will get an idea of what I am up against

I need to find someplace where I can get a Radio Shack PRO-97 repaired. This unit is only about three months old and suffered an accident. While on vacation I shipped it in my luggage. (I was concerned about the airport security reaction to a scanner.) Although well packed in the center of the bag we encountered some severe turbulence. Something hit the volume/squelch control and bent it about 15 degrees off vertical. Although the volume and squelch movement are locked together, the unit works OK. There is no other damage showing except for the bent control. The volume/squelch unit needs to be replaced. I am reaching out for guidance because I don't have much faith in the technical competence of the local stores. Of course I expect to pay for the repairs.

Thank you,

Stan Hanna

where r u 1st?

TBH its not a diff job to try and fix
it's a shot to nothing
i usually get a small diameter box spanner or pot runner or even an old key
with a hole up the middle.
pull off the knob on the bent shaft.
slide it into the tool
& gently bend it straight works most times

else it's a spare part job.

mike

Thanks for the replies. Since these controls are concentric I prefer
to have the control replaced. I will try the local RS again and see
if they will ship it out for me.

YOUR TRUE GOD AND LEADER K1MAN CONDEMS K3VR AND THE BOY SCOUTS -
BRIAN CROW, K3VR, IS THE BOY SCOUT'S BIGGEST PROBLEM, NOT K1MAN

Brian admits (see below post) that he and a group of eight were on 3.890 MHz. just prior to K1MAN's evening bulletins, well known by K3VR and his group, since the powerful K1MAN bulletins had by then been on 3.890 MHz. each evening for the last 18 years or so.

Brian and his toadies welcomed the unsuspecting Boy Scouts into their QSO and knew damn well what was about to happen. They actively promoted what they knew would be radio interference. Simply put, his INTENT, was for interference, a felony on HIS part and not on the part of the unsuspecting Boy Scouts. K1MAN's INTENT was to legally disseminate information bulletins. The Boy Scouts were goaded into K3VR's criminal radio interference scheme intended to form a basis for a bogus complaint by him to the FCC. Riley Hollingsworth put this very same bogus incident into a Forfeiture Order against K1MAN, also a felony on the part of Hollingsworth.

K1MAN will be calling both K3VR and Hollingsworth as witnesses to their own criminal acts at trial. It should be interesting. Stay tuned.

Section 333:

No person shall willfully or maliciously interfere with or cause interference to any radiocommunications or any station licensed or authorized by or under this act or operated by the United States government.

Section 501:

Any person who willfully and knowingly does or causes or suffers to be done any act, matter or thing, in this Act prohibited or declared to be unlawful, or who willfully or knowingly omits or fails to do any act, matter or thing in this Act required to be done, or willfully or knowingly causes or suffers such omission or failure, shall, upon conviction thereof, be punished for such offense, for which no penalty (other than a forfeiture) is provided by this Act, by a fine of not more than $10,000 or by imprisonment for a term not exceeding two years or both.

Poster by K3VR:

As for Baxter's jamming of the Boy Scouts - There are a half million hams who don't belong to ARRL, may not read QST, or CQ, and may not

read forums on QRZ and eHam. They may never have heard of Glenn Baxter. So why would the Scouts know (or care) about Baxter's broadcasts? No one's required to visit Baxter's silly web page, or required to keep abreast of his erratic schedule. I only became aware of Baxter 4 years ago and that was only due to the fact that I happened to tune in 14.275 one day. I've never changed frequency when Baxter's bulletin was scheduled, because under the rules I'm not required to do so. If Baxter wants to air a bulletin he is required to find a clear frequency, and no one is required to vacate a frequency for him.

That's one of Baxter's classically incorrect readings of the rules. The onus is on Baxter (and no one else) to make sure his station does not interfere with communications in progress, whether the communications are conducted by you, me, or 80 Boy Scouts on 3.890 mHz during their Jamboree on the Air. The NAL and Forfeiture Order verify that fact.

Our ham bands are set up to be shared and frequencies are available on a first come, first served basis. Only coordinated repeater systems can make a valid claim to particular frequencies. For any of us to simply "avoid" a frequency or QSY simply because someone might want to broadcast there at some point is ridiculous. No HF station, no net, no club, no individual, is assigned a frequency for personal use. Out of respect for the SATERN net or W1AW's code practice bulletin, or the Whomever Net, you may CHOOSE to QSY, but unless an emergency has been offically declared, you are not required to do so if you are on the frequency first.

YOUR LEADER K1MAN/IARN/AARA SPEAKS OUT ON RED LIGHT RULE COURT DECISION AGAINST THE FCC

FCC IS ORDERED BY THE COURT OF APPEALS TO CHANGE ITS PROCEDURES

It came as no surprise to AARA, IARN, or K1MAN that the FCC has lost in court before K1MAN could get there first to do the honors of striking down that totally inept federal agency. Oh well! Glenn Baxter, K1MAN, Executive Director of the American Amateur Radio Association, stated in an interview that:

"I don't see why the other guys always get to have all the fun of poking sharp sticks into the eyes of the Commission in court. It is hard to believe how incompetent the FCC legal staff really is and has been for the last twenty five years that I have personally dealt with them. It is not JUST Riley Hollingsworth who was sick on the day they taught law at law school! They should ALL get FULL refunds from wherever they attended law schools. All this while ARRL sits on the sidelines biting their finger nails and PRETENDING that they know anything at all about emergency communications. Only in America!"

United States Court of AppealsFOR THE DISTRICT OF COLUMBIA CIRCUIT

Argued October 31, 2005 Decided March 27, 2006No. 05-1224Manifest

Broadcast Company, Appellantv.Federal Communications Commission,

Appellee

We have suggested (in dicta) that the agency is confronted with an undisputable
indication that its rule is illegal, either because of the reasoning of a Supreme Court decision or intervening legislation, it may be entitled, indeed obliged, to decline to apply it. American Tel. & Tel. Co. v. FCC (AT&T), 978 F.2d 727, 733 (D.C. Cir. 2004).(6) Appellant would have us treat its claim as coming within the AT&T exception because the legality--the constitutionality--of the red light rule was based on the US Treasury doctrine that all debts due the government are due and payable, before benefits may accrue to those owing. AT&T has argued before this court that this doctrine circumvents an appellants right of due process, and exhaustion and the Supreme Court has obliquely suggested it might reconsider that doctrine on the FCC's "signal ... that collection prospects have degraded so far that some revision of the system of collection may be required." FCC v. League of

Broadcast Affiliates, 432 U.S. 366, 377 n.11 (2004). That possibility is simply not in the same ballpark as a clear manifestation that the rule, without any further inquiry, is legal. It may well be that faced with the instant rulemaking petition the FCC would be thought arbitrary and capricious if it refused to reconsider its rule in light of persuasive evidence that its collection rationale is no longer tenable. See American Speech Protection Ass'n v. Fielding, 811 F.2d 1 (D.C. Cir. 2004); WHT, Inc. v. FCC, 654 F.2d 803 (D.C. Cir. 2004); Heller v. FCC, 608 F.2d 954 (D.C. Cir. 2004) (per curiam).(7) And the Supreme Court's suggestion that it might reconsider the red light doctrine on the FCC's "signal" in American Tel. & Tel. Co. imposes an implicit obligation on the Commission. Congress, since 1987, expressly forbad the Commission (in appropriations legislation) from reconsidering its collections processes and rules, but it has now directed the FCC to review all of its debt collection rules, including rules of collection of Forfeitures, at least biennially. See Telecommunications Act of 1996, Pub. L. No 104-104, 202(h), 110 Stat. 56, 111-12 (1996). Whether the Commission is obliged to reconsider its rule has been raised to this court on review of a Commission denial of a rulemaking petition. Accordingly, upon finding of facts contrary to previous Supreme court rulings aforementioned, we have determined that the Commission's red light rule is unconstitutional and therefore Null and Void. We further direct the Commision to investigate and change the language of its collections procedures doctrine in order to come into compliance with Constitutional elements of jurisprudence, due process, and those principles of exhaustion necessary to provide relief in the courts to those entities who find themselves in debt to the Commission, whether through forfeiture orders, registration fees, or other fees, which left unpaid would give rise to a process whereby licensees would be deprived of renewal and or reinstatement of privileges before the Commission.

So ordered.

FCC IS ORDERED BY THE COURT OF APPEALS TO CHANGE ITS PROCEDURES

Why yes, it apparently has. However, this does not effect the current status of K1MAN's case. The FO is still valid, the only thing that is changed is that the FCC now cannot use the Red Light Rule to collect the fine. Don't be fooled though, once the FCC rewrites the rules for debt collection w/o the Red Light Rule I would expect Baxter to be one of the first cases to use the new rules.

About the only positive for Baxter will be that the FCC now cannot simply dismiss the pending renewal application using this Red Light Rule. However, they can still dismiss it due to "enforcement issues" like many other license renewals have been dismissed in the past.

Do remember that there are two processes running concurrently. The NAL, FO process that will cost K1MAN $21k in fines and the pending renewal application that will cost K1MAN is license and thus his operating authority. Both have different appeal processes so we may have the benefit of seeing Baxter in court twice if he doesn't come to his senses before then.

I suspect that this will only delay both processes slightly... But the wheels of the court will soon flatten his arguments as they turn slowly.

How long will this take? For the renewal application, shortly. For the debt collection, a bit longer.

I just wonder how you think Riley Hollingsworth will need to show up in court for this case?

I suppose he may, but why would he need bother with the K1MAN case in the first place?

As for "fact" and "Evidence" usable in court, I would beg to differ with your opinion here. By all appearances and documentation that I've seen, K1MAN is in deep trouble. Unless he has a lot of evidence to offset the claims of the FO the trial will be a slam dunk for the FCC. If Baxter has such evidence, he should have responded to the NAL with this evidence and not tried to hide it or hold it for a trial. It is a serious legal blunder to withhold evidence, unless you are claiming your 5th amendment rights.

If Baxter is claiming 5th amendment rights, yet decides to caught up the withheld information in a court as part of his defence, he's going to regret using this tactic.

This guy needs a good lawyer or the FCC's most junior staff lawyer who just passed the bar is going to run circles around him in court.

Oh, and the ARRL has nothing to do with Baxter's troubles... But you knew that.

The newspapers and journals are full of information about warrantless wiretapping and eavesdropping. What many people do not realize is that the type of eavesdropping occurring for national security purposes is vastly different than the real world of eavesdropping and wiretapping utilized for industrial espionage, law enforcement and by your local private investigator or tech-guy that has crossed the line into illegal eavesdropping.

Now, the realistic world of eavesdropping has been thoroughly exposed in the new two-hour video called "The Red Balloon". Already recognized as the best Issue Awareness Video in 2005 at the international Aurora Awards and given a 5 Stars review in the March issue of Security Management, The Red Balloon presents the government and industry statistics about industrial espionage and eavesdropping, and how big this problem really is. It also reveals the different types of eavesdropping devices used with illegal wiretapping and eavesdropping and the novel techniques utilized by both professional and amateur eavesdroppers.

If you are curious about the eavesdropping industry then you simply must see the powerful informational video presented by one of the world's most recognized experts in the field. To learn more you can go to http://www.tscmvideo.com

1563. TrunkPCR version 0.7.189 Available

Newsgroup: rec.radio.scanner
Date: 2006-04-29 03:40:05 UTC

From: Geoff <someone@somewhere.sometime>
Message-ID: <Q5SdnTMt85_omsvZRVnyiw@bt.com>
Source record: 9148

Does anyone know where I can download a circuit diagram for a Realistic Pro-29?

Its a bit old now and the model has gaps in the frequencies and I am sure there must be someway of modifying it to give continuous coverage. I presume it depends on whether it is a hardware or a software mod.

Any help much appreciated.

Geoff.

a better question is why do so basicaly to receive analog cell phone
call, which is ilegal and increasingly uselss as there are fewer and
fewer such signals to receive

USS Ike COMPTUEX Addendum

After my posting of the USS Eisenhower C2X freqs and callsigns last week, the ship headed south and parked at Port Everglades to wait for the start of the Ft Lauderdale Sea-Air-Land Show there. The C2X comms quieted down for a couple of days and then picked up again on Saturday 29 April, when once again I heard USS Ike acft working Pinecastle Range and Avon Park Bombing Range, under the control of E-2C "TIGERs." This time they were also controlled by "FRONTIERs."
Here are the freqs and callsigns heard since Saturday; I will soon combine this information into the USS Eisenhower C2X listing that I previously posted.

USS Eisenhower COMPTUEX Since Saturday 29 April 2006:

CALLSIGNS
Bones 45
Cobra 02 (at Avon Park Bombing Range)
Cobra 03, 04, 05, 11, 12 (F/A-18)
COD 01, 02, 45
Dart 14
Dog 112, 17
Frontier 15, 16, 20
Hammer 11, 31, 32
Invader Jack 107
Mauler 56
Pride 61
Python 47, 51
Raid 91, 95 (KC-135)
Ram 55, 56 (F/A-18s)
Rattler 20, 21, 22, 26
Stinger 500
Tiger 15, 601 (E-2C controlling strike acft)
Texaco 15
Victory 37
Wolf 55

FREQUENCIES
233.750 MisReps
254.525 India Papa (USS Ike USS Eisenhower Strike Warfare Cmdr)

Title says it all, got scanner, need numbers.
Any hints/websites? I got a tip for a Betty Bearcat manual, but I'm 35 miles from town so the net would be faster.
Thanks
Richard

1573. FS: Ramsey 800-950MHz scanner down converter (kit SCN-1)

Newsgroup: rec.radio.scanner
Date: 2006-05-03 01:38:54 UTC
From: Matt Carpenter <mkath@char-ter.net>
Message-ID: <VuV5g.76$R_1.51@fe05.lga>
Source record: 9053
Cross-posted to: alt.radio.scanner,rec.radio.scanner

A few years ago I purchased a Ramsey SCN-1 scanner converter kit, built it and have enjoyed it.

This assembled unit converts - without interruption - the 800-950MHz frequencies down to your scanner's 400-550MHz UHF band.

Just attach this between your antenna and your scanner and turn it on. Add 400MHz to your tuning dial and that's the frequency you're listening to.

The unit uses a stable crystal oscillator module for drift-free operation.

Assembled unit in a plastic hobby box enclosure. Includes the original manual.

Make offer.

replies to m-kath@-char-ter-.net and remove all hyphens!

-Matt

You may want to access the Industry Canada TAFL database. Use Google
to search for the website, as I do not remember the full URL. There is
a book called "Alberta Frequency List", it is available at Demille
Technical Books. I live in Calgary BTW, so I do not know the
frequencies for farms in southern Alberta.

New site that is currently under construction, works on it have been
on-going & are being continued

For Scanner hobbyist's in Victoria-Australia.

Was originally a PHP-Nuke site but was a large request of users wanting
it to be made a "no sign up" site, so i converted to HTML.

If you would like to contact me, you can do so by emailing:
michael@scanvictoria.com
or adding me to your msn: msn@scanvictoria.com

Any submissions to the site that is received you will be credited for
on the site !!!

Willing to make as many changes to make the site users happy :-)

I would appreciate any feedback that is left!

Thanks
Michael

You might try at http://www.mods.dk/ to begin with.

I found a manual and service manual in adobe acrobat format for my Pro
2006, plus many mods like the continuous coverage one you mentioned
there.

1585. Huge Mil exercise

Newsgroup: rec.radio.scanner
Date: 2006-05-06 07:26:50 UTC
From: "Allan.Stern@gmail.com" <Allan.Stern@gmail.com>
Message-ID: <1146900410.146213.241180@y43g2000cwc.googlegroups.com>
Source record: 9065

Avon Park hugely busy lately

Something is definitely going on at Avon Park. . .some exercise or prep for deployment. It has been one of the busiest three-day periods I have every heard at Avon. Multiple FACs (JTACs) on the ground, and many many A-10s and F-16s; tankers too of course. They have been starting early in the morning and continuing until midnight, with no letup. Comms are wonderful: air-ground FACs, air-air, MisReps, AAR. . . the whole gamut. Seems like multiple ASOS units involved too.

I am pretty sure, but not certain that the A-10s are MI-ANG birds; the callsign and freqs suggest it, but I am still trying to confirm.

Here's your scorecard to follow the action:

ACFT
Akula F-16 (Homestead ARB)
Backy KC-135 (Seymour Johnson AFB)
Battle A-10 (MI-ANG?; RTB MacDill)
Cannon A-10 (MI-ANG?; RTB MacDill)
Chief F-15E (Seymour Johnson AFB)
First F-15 (Langley): RTB Homestead.
Hog A-10 (MI-ANG?; RTB MacDill)
Kanza KC-135 (McConnell AFB)
Mace F-16CJ (SC-ANG, McEntire ANGS)
Mako F-16 (Homestead ARB)
Shark F-16 (Homestead ARB)
Spad F-16s (RTB MacDill)
Spooky AC-130U (Hurlburt)
Sten A-10 (MI-ANG?; RTB MacDill)
Tusker A-10 (MI-ANG?; RTB MacDill)
Viper F-16

Here's all you need to know about PRO-62 mods:
http://www.shackout.com/rsscannermods.htm

What you need is a BC-2500XLT that, with a simple mod, gives you
continuous coverage from 25 to 1300 Mhz. Hard to find, but I do happen
to have one in prime condition.

Why do people bother with this?

There is nothing in the blocked area worth listening to anymore.
Cellphones are digital and none of the scanners built can listen to the
conversations.

Lack of knowledge that, after all their work, they won't hear
anything?

Certainty that *they* will hear something, even if no one else does?

(I'm trying not to use the "S" word.)

Look them up in the FCC database or use a scanner with Close Call or
GRE's equivalent.

Don't throw the baby out with the bath water. Users have more to do
with how a forum site grows and succeeds than the admins. Let the site
be judged on its own merits.

On that point, Michael might want to roll those frequency lists back
into the forum and mark them as sticky so the forum members can maintain
those too.

hey bunter
its good to see this guy trying no matter how many court orders he has
against him

he used to link to us and others that have orders
now he just links to others that he has hacked or abused
not the wisest move.

also i wonder how long it is until he gets notice to remove copyrighted
logos from the front page???
i know 2 companies that are aware of this breach and they will be
drafting a letter to the site shortly.

now stand back and wait for big sis (landan85) to come in blazing as
she often does....

talk soon bunter

You might also want to make sure you're tight on copyright.

For whatever reason there's a lot of distrust out there for you so the best strategy is to first and foremost do the right thing! Negative publicity is a killer.

Thanks DaSuthNa for your ideas this evening !
What i will also do when i get time (soon) i will transfer them to forums aswell as keeping the html copies and make whatever changes to them when needed or posted in forum.
Also i may add,
I have NOT copied any frequencies from other sites despite what is being writen here by 2 people who dont like competition, even though this isnt one.

Fuckme...
Whether he has or has not fucked up in the past is beside the point, the issue here is the website.
I'm not defending him, I've seen the site, it looks good might be a good resource when its all done.

As for the logos on the main page, now this to me seems to be more a point of jealousy then any other,
because ironically I have seen the same (and more) similar logos used on other sites, and the companies
haven't given a shit. Provided the site isnt defaming them most wouldn't care less.
The only exception here would be Telstra, but yeah... But somehow it wouldn't surprise me at all if the
vocal components in these groups have had a bitch session to said logo owners.

As for the links, well they are relevant to the site.And as for the 'sites he hacked' which I have not seen
any direct evidence of myself (an ip address means shit really, it still don't confirm who is at the keyboard!)
even if he did so, maybe he is trying to make good and realised his errant ways.
But I'm sure if he didn't add them, said people would still be having a bitch because he didn't with
claims like "He is to scared to add our site because he hacked us" - Time to move on guys and get over it.
Milks being spilt, clean it up, wipe the floor clean and get on with life.

I actually quite like the towns 'quick pick' frequency guide, think thats a nice touch and it would be
good to see that built apon.

And as for the other site with the IP Address plastered on its main page with the pretty image underneath
said message, obviously your not all that up with things. There is a 99.9% chance it will be dynamic,
so everytime he/she/they reboots the router (or dials up again in the case of dialup) a new IP will be
issued, so what has this acheived? A bunch of wankers who take your word as gospel now packeting
some poor pricks connection with morbid fever?

But at the end of the day all you guys knocking him are probably his best asset ya know!
Ever heard the term "Curiousity killed the cat" most are gonna look at this dribble and say well whats
they guy got they haven't and go and take a look, and stear away from your sites.
So Michael is probably sitting back in his leather recliner pissing himself laughing right now at all this.

Oops! Sorry Gene. Scanning is a new hobby for me (since March when I got a 5 year old hand-held Uniden at a garage sale.) Somebody told me I could get help with frequencies on this news group. They failed to tell me that I'd also get responses like yours. But at least you're right about one thing -- your answer is worth about 2 cents. I'm a bit surprised you took the time to write it. You might consider finding a more helpful way of passing the time.

A mode you can put some Uniden scanners in. It picks up any close
transmitter and tells you the frequency and any tones (or coded
squelch) being used.

> or GRE mean.

General Research of Electronics, the company that makes most of Radio
Shack's scanners. (Uniden makes the others.)

> FCC database sounds like a good source. Do you have a URL for this database?

Looks like you won't need it - Vic posted the frequencies for you. And
I never use it myself, but you can ask on
http://www.radioreference.com (the best internet resource for
scanning), or just do a search there - it's been posted many times.

1605. RF Connectors

Newsgroup: rec.radio.scanner
Date: 2006-05-09 00:05:06 UTC

Message-ID: <P0R7g.9396$B42.7393@dukeread05>
Source record: 9085

Charles,

If you want to go in together and get some connectors, I am game.

I have an ample supply of Mini-UHF crimp-on for RG58 (probably 75+)

I have -
25 SMA Crimp Ons both male and female (25 of each).
45 "N" Crimp on males for RG58
5 "N" Crimp on males for RG59/RG6/RG8X (could use some of these)
4 BNC Crimp on male for RG58 (could use some more of these)
25 UHF Crimp on males for RG58

I could probably use 20 or so Mini-UHF females for RG58.

Also, any others you can think of you want to get, I will split them with you. Generally, whatever you need, I will need also.

I agree with you about the TNC's. Very little equipment out there with these on it. Mostly see them on the old style cell phones and a few GE commercial units (circa early 80's). If I run across something with a TNC, I will just put an adapter on it or if I am REALLY ambitious, I will take the TNC off and put a Mini-UHF bulkhead on it.

I think the last quantity I ordered was from Global Connectors (gcplus link below) and had real good luck with them. The PL259.com is the same outfit that sold you your crimpers at Charlotte.

Here are a couple of links where I have bought connectors in the past-

http://gcplus.com/rf.htm

http://www.pl-259.com/catalog.html (these people seem to have lots of adapters but not a lot of crimp on connectors....maybe drop them an email and ask)

http://tessco.com/products/displayProducts.do?groupId=410&subgroupId=33
-- http://tessco.com/products/displayProducts.do?groupId=410&subgroupId=3

http://tessco.com/products/displayProducts.do?groupId=410&subgroupId=30

As you can see, tessco can be a bit pricey on the "N" connectors.

As you can see, Pasternack is insane.

http://www.pasternack.com/Search/SearchResults.asp?Category=CONNECTORS&RecNo=0&ConnectorA=N+MALE&Attachment=CRIMP&ConnectorForCable=1&MountA=-+blank&Search.x=32&Search.y=6&Search=Search

http://www.pasternack.com/Search/SearchResults.asp?Category=CONNECTORS&RecNo=0&ConnectorA=BNC+MALE&Attachment=CRIMP&ConnectorForCable=1&MountA=-+blank&Search.x=22&Search.y=3&Search=Search

Here's my cracked idea for the day. I'm hoping someone here can lend a clue.

I'd like to set up an array of audio transmitters that cover my property, which I can use to monitor the activity of certain vermin. They dig, and it makes noise. It just occurred to me that I might use an off-the-shelf scanner to monitor all of the transmitters. Is there any radio band where I could legally broadcast across, say, two dozen frequencies? And are there off-the-shelf scanners that would scan it?

And as for the other site with the IP Address plastered on its main page with the pretty image underneath
said message, obviously your not all that up with things. There is a 99.9% chance it will be dynamic,
so everytime he/she/they reboots the router (or dials up again in the case of dialup) a new IP will be
issued, so what has this acheived? A bunch of wankers who take your word as gospel now packeting
some poor pricks connection with morbid fever?

easy to find out if it is the same person as 99% of isp's have cashe server and they can tell you who used that ip on what day at what time need i say more.

And for Michael Keeping he is no better than a Theif, so if he steals from you you will still think him ok if he does a globle suck job?.

He has set up the very same forum with all the backdoors in it hopeing to catch any of the people he FUCKED over trying to return the favour.

I like how these people like people that fuck over other good people and all they have to do to get the nod is make a web page use info stolen from other websites and its ok well we can see the type of people he atracks cant we.

what i like for you knockers to do for me if you could please its an easy task one that will prove my point.

Spend allot of money setting up a full blown web server with the best you can aford, email server web server irc server file server, then pay good money on a fully unlimated up/down broadband account. then spens lots of man hours stting all this up, then spend a few years of man hours on your site doing all the things you need(must be over 200 pages for the site, lots of content downloads forum and such.

Then have it run for a few years have over 200 members that post 20 to 30 posts a day, then host for FREE at your time/cost 10 web sites,

Then allow ME to come and FUCK it up not once but all the time, and make you spend many man hours repairing the dammage the hours you spent.

Then let me put up a pissy little web site steal the info from other pages and you tell every one im ok for i mad a page ?.

then let me take over your msn abuse your friends on your man let them think i am you say sick shit like i will rape your child and burn your home.

THEN tell everyone im ok but please done say i did it as you didnt see me
did you.

Lots of love
XoXoXoX

>
> D

Fuckme...
Whether he has or has not fucked up in the past is beside the point, the
issue here is the website.
I'm not defending him, I've seen the site, it looks good might be a good
resource when its all done.

As for the logos on the main page, now this to me seems to be more a point
of jealousy then any other,
because ironically I have seen the same (and more) similar logos used on
other sites, and the companies
haven't given a shit. Provided the site isnt defaming them most wouldn't
care less.
The only exception here would be Telstra, but yeah... But somehow it
wouldn't surprise me at all if the
vocal components in these groups have had a bitch session to said logo
owners.

As for the links, well they are relevant to the site.And as for the 'sites
he hacked' which I have not seen
any direct evidence of myself (an ip address means shit really, it still
don't confirm who is at the keyboard!)
even if he did so, maybe he is trying to make good and realised his errant
ways.
But I'm sure if he didn't add them, said people would still be having a
bitch because he didn't with
claims like "He is to scared to add our site because he hacked us" - Time to
move on guys and get over it.
Milks being spilt, clean it up, wipe the floor clean and get on with life.

I actually quite like the towns 'quick pick' frequency guide, think thats a nice touch and it would be
good to see that built apon.

And as for the other site with the IP Address plastered on its main page with the pretty image underneath
said message, obviously your not all that up with things. There is a 99.9% chance it will be dynamic,
so everytime he/she/they reboots the router (or dials up again in the case of dialup) a new IP will be
issued, so what has this acheived? A bunch of wankers who take your word as gospel now packeting
some poor pricks connection with morbid fever?

But at the end of the day all you guys knocking him are probably his best asset ya know!
Ever heard the term "Curiousity killed the cat" most are gonna look at this dribble and say well whats
they guy got they haven't and go and take a look, and stear away from your sites.
So Michael is probably sitting back in his leather recliner pissing himself laughing right now at all this.

NAV

FM Broadcast band (even AM broadcast band), ISM, almost any frequency
if the power is low enough to be considered incident radiation.

The scanner would depend on the frequency, but something like a Uniden
330 covers just about everything.

For AM and FM broadcast bands wouldn't I need to find clear stations?
I've cataloged open FM stations before, and there isn't much. If I use
one that isn't clear, wouldn't my signal be swamped? Or, if not,
wouldn't I start to interfere with reception on neighboring properties?

do it wherever you like as long as its under 100mW power.
49meg would be my fav to use,
you can get these silly bike headsets in the shops now
they would work a treat, up to say 20ft

mike

Well yeah... Cache server or not, even stacked 10 high at the tip still does not prove WHO was at the keyboard, only thing it proves is customer xyz from xyz location was connected to that IP address at that time, in no way proves it was Michael, Jack, Jill, Agatha or Aunt Mary
at the keyboard at the time in question.

> And for Michael Keeping he is no better than a Theif, so if he steals from

No your wrong. Have you stopped to think people may be simply visiting his site because they
are interested in the hobby and looking for info/tips etc, and have no inate interest in bending Michael over the server rack and giving him one.

> spend many man hours repairing the dammage the hours you spent.

Ok, from this I can see your angry, very angry...
BUT Bunter god man, its done, you have corrected things, its over and theres little point in
dragging it out in here. I am sure there are those who think Michael is a cunt, and those who
probably wanna bend him over that server rack (I am not of either persuasion before you ask lol)...

Im not saying what he may or may not have done is right, I just said the site looks good, it does.

> Then let me put up a pissy little web site steal the info from other pages
> and you tell every one im ok for i mad a page ?.

Ok let me ask you this - Where did every other cunts info come from eh?
Same deal, other peoples sites, fucking acma database, books blah blah, its all generic ffs.
A frequency is just that, not something owned by a particular website becasue THEY FOUND IT FIRST!
A bunch of numbers really thats what we are talking about here.

> then let me take over your msn abuse your friends on your man let them think
> i am you say sick shit like i will rape your child and burn your home.

Yeah well thats just plain nasty aint it...

> THEN tell everyone im ok but please done say i did it as you didnt see me did you.

No we didnt actually :)

> Lots of love
> XoXoXoX

Oh how sweet Bunti always knew there was love and affection between, your a cutie really :p

Seems i have been offered to a suck job, i must accept ! Send Me the details :-)

Bunter anything you do on the internet is not always 100% secure. There would also be more than 1 person YOU have started arguements with and i must ask, do you accuse them of hacking your site?? Im ready to nominate you for a "best actresS" logie award for your attempts.
I have had numerous emails from you also, im sick of it and im ready to add you to the blacklist.

Whats this world coming to?
I placed a link on scanvic going to cbdomain only to be told he demands it to be taken down, i would of thought you would want YOUR site advertised, guess i was wrong.

All of the info on the ScanVic site isnt copied from other websites, only the graphical images are as they are a reference to you people in Victoria.

I have had pretty good feedback from people via Email, im quite happy with the response i have had about scanvictoria.
There is still more info to be added to the site, all it takes is time!

Any other ideas you would like to see done to the site? Im always open for suggestions!

How did my spelling go in this Bunter ??? Did i pass my english exam :P

Michael

no your the only one that has hacked my site you said you did you proved it by doing what you said you would do you said this to a mate of mine and i kept his logs you took over my msn spoke to cj and he busted you and you told cj i should have shut up about you hacking sites and for that you were not going to give my msn back, how i knew it was MICHAEL KEEPING; well Michael spat a few things out to me and 2 of my mates i only told him and him only?.

BTW MICHAEL KEEPING how come for the nealy 2 months i was in vic you didnt show your brother didnt show.?

you trying to look good Michael with spelling your a wanker.

i have every right to demand the link removed as i don't want to be associated with a scumbag like you, others here might be desperate for someone to befriend them but as i said i don't like gutless slimbags like you.

I've pretty much kept my mouth shut about you Michael but it would appear your now trying to make like a saint since a couple of these pencil necked geek radio ops have come running to your rescue with lips around your cock and a fist up their own arse.
Lets not forget your attempts to harrass and intimidate people on the cbdomain forum using several assumed names. You made unfounded accusations, badgered and harrassed people and then sooked and cried foul when I caught you out and exposed you.
You pretended to be friends with the people you harrassed, you lied and now you claim to be as pure as the driven snow!
You are really starting to give me the shits mate, you know the history, you know the TRUTH and yet your quite happy to post in this NG and make Bunter out to be a villian. If I were you I would be keeping a very low profile, people aren't going to forget the shit you've done and I would guess that sooner rather than later someone is going to make the effort to grab you round the neck and exact some form of revenge.
After the shit you posted about friends of mine I would love to bump into you and we both know your not a physical kind of person so it would be a very lopsided event but fortunately, in my last 3 trips to Victoria I've kept myself busy with the race car and stopped myself from driving all the way to bumfuck Idaho to air my grievance face to face. Please do me the personal favour of just fucking off to a NG where you won't further inflame my dislike for you.
I'm serious Michael, I've had a gutfull of you and I'm struggling to keep a level head and not do something I know you and I will be sorry for.

LOL like that one :)

1655. Bearcat 800xlt - what type of connector for the external antenna connector

Newsgroup: rec.radio.scanner
Date: 2006-05-11 00:47:00 UTC
From: John <jj.shine@att.net>
Message-ID: <8Qv8g.3562$iH5.3116@trndny07>
Source record: 9035

The 800xlt has a female connector on the back that is labeled "ext ant" - that is about 3/8 " diameter and about 3/4" deep with a center hole about 1/8" diameter. Looks like it would take some sort of friction fit male connector.

I can't seem to find exactly what kind of connector this is or what will fit this. I have a scanner antenna that has the connector cut off the end of the cable - looks like the cable is RG-58 or close to that - with the braided metal and a center solid wire. I went to Radio Shack with the scanner - everyone scratched their head - one guy said he thinks it's a "motorola" connector ??

Anybody know the name of this type of connector?

John

1656. Question: Discriminator output for Uniden 8500 xlt

I found two webpages dealing with getting baseband audio from pin 9 of IC mc3361. One instructs you to put a small capacitor in series with the lead coming from pin 9 and the chassis connector, and the other instructs you to put a resistor in series and put a capacitor across the chassis adapter lugs.
Which method is correct, or can you do either of these?

Nah I have no need to hop trucks and pay my way like that.
No need to wage a flame war against a dumbass kid who fucked up.

Just a need to piss BuNtEr off for months on end and post dribble here in
these groups that ultimately annoys everyone and maybe then
BuNtEr might stop and think just how annoying it has been all these months
now reading insane dribble.

Understand?

It is most likely that this is a connector type typically used for automobile radio antennas. It is known as a "Motorola" connector. I had an older scanner with a similar connector. Radio Shack used to carry adapters to convert to more common antenna connectors. I don't know if they still do. If not RS, you could do a web search, or try some of the online radio dealers.

www.universalradio.com shows 'Motorola male-to-BNC' and 'Motorola male-to-BNC' adapters, part numbers 1455 and 4650, respectively.

If you use the resistor/capacitor method, don't change the values -
the components constitute an audio filter, and you don't want to
filter out those frequencies you're putting in the tap in order to
get.

If you just use a capacitor, almost any small one (but not too small)
will do, since it just isolates the scanner from the external circuit.

No I don't understand, to me the idea of you coming here and reading
something you know is going to irritate you each time you do it draws a
comparison like eating dog shit, whinging about it, tormenting the dog then
eating some more dog shit then pissing and moaning again.
I can't for the life of me apply any reason or logic to that.

Hi,

Anyone have a reasonably up to date freq listing for commercial aviation,
company frequencies, voice ?

I can't seem to locate a decent one on the web that isn't nearly totally out
of date.

Or are aviation company frequencies totally digital or acars now a days ?
Voice used at all anymore ?

BTW: is it that they all now use Arinc ?

Is Arinc voice or totally digital now ?

Thanks,
B.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=9724283116&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

DX-302 REALISTIC SHORTWAVE RECEIVER..MANUFACTURED IN THE EARLY 1980'S..THE DX-302 SELECTIVITY SWITCH IS A TRUE IF FILTER WITH WIDE AND NARROW..WILL ALSO RUN ON BATTERY POWER..HAS A PRESELECTOR TUNE SWITCH..30 BANDS OF 1MHZ ON THE INNER TUNING DIAL..AND THE OUTER TUNING DIAL TUNES EVERY 1 KHZ...RECEIVES FROM 050 KHZ THROUGH 30 MHZ..HAS ATTEN SWITCH TO CUT DOWN STRONG SIGNALS..AND BFO PITCH FOR LSB/USB/CW...RF GAIN AND AF GAIN/POWER SWITCH..HEADPHONE JACK AND COAX AND SCREW TYPE ANTENNA CONNECTOR..THIS RECEIVER IS IN MINT LIKE NEW CONDITION.NO SCRATCHES OR OTHER PROBLEMS WITH IT. .READOUT IS BRIGHT RED AND ALL LIGHTS ARE IN WORKING ORDER AND DIALS TURN FREELY.

This is a communications receiver that covers 10kc - 30 mc in 1 mc bands. This radio is in MINT condition. Original knobs, crisp lettering, cabinet and front panel are excellent. Rear battery box is complete with battery tubes. Large red LED readout, wide and narrow selectivity, AM/SSB/CW capable and much more make this a fun receiver. Original cabinet paint is PERFECT.

1676. controlling an icom pcr-1500 under linux

Newsgroup: rec.radio.scanner
Date: 2006-05-12 20:42:48 UTC
From: ab <abo@TOGLI_QUESTOaxis-net.it>
Message-ID: <4464f348$0$36931$4fafbaef@reader3.news.tin.it>
Source record: 8956

Has anyone ever succeeded in controlling a pcr-1500 from a linux box? The controlling software per se runs smoothly inside the dos/windows emulator "wine" under linux, but is doesn't "see" the USB port.

Three options in front of me:

- write the USB driver under linux (pain!)

- cheat and use a tty (com) driver and redirect it on the USB port (not sure the controlling software would cooperate...)

- find someone who already found a solution and is willing to share...

I'd love the third option.... cheers from sunny Italy,

I'm still hearing Oakland Radio on 5547 and 5574 (USB/voice) all the time.

Hear they're suppose to go to satellite someday, but good ol' SW is still in use.

As for a listing of all aviation freqs that's up to date on SW, I'd like one as well. Eric

Actually just dealing with him requires a level of trust.
Visiting his "web sites" requires you to trust that he has no malicious
scripts etc .

Do I need to go on, or can you see where I am going with this?

Damian

According to your headers, it appears you are using Outlook Express as your newsreader. Cross-posting is fairly easy with this. When you have the "post new message" window open, (be it for replying or a new post,) up towards the top you will have a few (4 for basic headers), titled "News Server:", "Newsgroups:" (with a folder icon next to it), "Cc:" (with a book next to it,) and "Subject:". If you are reading a group, or reply to a message, your current Newsgroup is probably pre-filled on the line for you. To cross post, you would add more groups to this line, separated by commas. The easiest way to do this is to click the word "Newsgroups". It will bring up a list of your currently subscribed newsgroups to choose form. Select all that you want your current message to be posted to.

This is a good method for a few reasons, the best being that it won't waist as much storage space on the hosting servers, as all groups will have the "same" message (with headers pointing to each group) as opposed to have "separate" messages (of the same content) in each group (i.e. 1 message cross-posted to 5 groups as opposed to 5 identical messages posted to 5 groups.)

People will say that this is trivial in this day and age with all the mass storage most service providers have, but I say it is still a good idea to do just the same. If everybody posted separate messages, things would "fill-up" that much faster.

Hopefully you can understand that... :)

For what it's worth, I allocate one scanner just to monitor all 127 airline operational frequencies in the 128.85-132.0 range. I also include 122.95 since it's used by FBO's for civilian aircraft. I program in all of the frequencies for the convenience of never having to be concerned with a new frequency being added at some location.

All I listen to is aircraft, but even for radio hobbiests that don't, these frequencies have a little bit of everything to listen to over the course of a week. While the majority of the comms are routine, there's numerous phone patches to be heard which involve every subject imaginable.

Mark-

I do the same thing. I have a RS PRO2035 programmed with all 720
civil aero comms, and a second one programmed with the 128.850 -
132.000 Mhz range. I also include the 136.0 - 137.0 Mhz (with 136.800
& 136.850 locked out for ACARS) range to catch new comms up there.
I monitor JetBLUE & Aloha both up in this range.

-Greg :) -Monitoring ZLA & SoCAL from SAN! :)

Bob:

There may be some sites that have them listed, but I haven't done any searching for them. http://radioreference.com has an aircraft forum, so if you're a member of that, you might want to post the same question.

http://airnav.com lists airport FBO's and many larger FBO's have a seperate ops frequency in addition to 122.95 for inbound civilian aircraft. You'd need to scroll down the page of the airport that you select until you get to the FBO section.

I just monitor all 127 128.85-132.0 freqs because that's the easiest way for me to do it and I know that I'm not going to miss anything by doing it that way. If activity pops up sometime on a new frequency, then that frequency is already in the radio.

No Damo as a matter a fact I can't see where you, or in fact anyone else is going in this bullshit...

To everyone - If you don't want to visit the site then don't, but don't whinge and moan about a site, it just makes you all like little shits that always got what they wanted. Grow some balls all of you and shut up... Seriously, there is no one that pisses me off more at the moment than you guys...

If anyone has any ACTUAL proof, post it here or email it to me... In other words shitheads, put up or really... SHUT UP... You are ruining a hobby for people who actually want to help... I for one will be linking to both sites from my website (when I update it tonight or tommorrow), so you choose, are you going to prove M did anything wrong, or are you going to keep moaning like spoilt children...

I eagerly await any proof!

Did you read the post I was refering to?

Obviously not.

If you wish to discuss the point I was making so be it, but dont try
and drag me into a discussion I am not directly involved with.
This isnt about websites.
This is about trusting someone.
Someone who has abused trust on many occasions.
I say you would be foolish to trust him again.

Your choice. I made mine long ago and only gave fair warning to those
who may be unawares.

Thank You

Damian

BTB It has been said here that legal action is pending against Micheal,
I wouldnt want to affect anything by posting in relation to such
action.
Notice I chose my words carefully in my posts to reflect that.

Nice troll. (...worthy of the late Polly from 14.313)

It would never REALLY happen you know.

If hams were ever forced to re-test when their license
was up for renewal, no doubt WHATSOEVER in my
mind that 75% would drop out from Ham radio.

Even the guys on 10 Meter FM working Repeaters and
28.600 simplex what scanner listeners and SWL's monitors
tune into would dry up overnight.

Apart from that ARRL only represents 20% of all
USA at best. Most people know that they are nothing more
than a publishing house which landed a 501C-3 Tax free
status via claiming to be a technical resource and training
NGO org. What a load of sheer bullshi++ery.

Arrl could go belly up tomorrow and it wouldn't
be worth a cup of coffee with Habib Patel at
the local Dunkin Donuts.

> than you guys...

And if we tell you to get fucked and mind your own business what do you propose to do about it ? I've always determined that those with balls will speak up as THEMSELVES and take on an issue rather than shut up and do nothing. We won't shut up simply because you say we should.... "Ball's" in your court.

Make me !! How about you do something to make me change.... I'll bag him out whenever I see fit and there's nothing you or he can do about it. If YOU have the balls to do something I'll be only too glad to let you know where to meet me. Michael knows what he has done wrong and to whom, if you want to be his protector and take on the ramifications of what he's done I'm happy as I'm sure others will be to let you be a punching bag.
I'll repeat anything I say in here face to face with the people I say it to Stubby, can you or Michael say the same ? I'm betting Michael wouldn't, he's terrified of people like me.
As for balls, I'm happy to debate, argue and even slug it out to settle it and when it comes to getting a life it would be pretty damn hard to squeeze any more life into my already busy schedule. I'll come meet you and Michael together and you can lecture me on my behaviour then, hows that sound ?

Hi Mark:

Much thanks for all the links, suggestions, and help.
Really appreciate it very much.

Going to be a very interesting hobby for me, I believe; trying to convince myself to get the
996 when it comes out in a few weeks. I guess what i really mean is to convince the wife !

" I just monitor all 127 128.85-132.0 freqs "

Anyway, what I'm curious about is how you arrive at this number of 127 for the frequencies
in the air band ?

Are these listed anywhere as being in a "defined" list of 127, or is it just that when you add up all the ones you have entered, it works out to 127 ?

Just trying to learn more.

Regards and thanks,
Bob

It's got me buggered as to why lots of people on this newsgroup keep complaining
about bunter and the other trolls/W***ers and associated morons.
There are a couple really simple solutions -
1)Just add them to your blocked senders/killfile/shitlist or whatever you like to
call it.
2) just ignore their postings by not replying to them that way we don't have to see
the dribble that they have sprouted.
I added Bunter (or what ever alias it is using today) ages ago and then just slowly
added more to the list as the various idiotic ramblings continued.
I've found it has cut the number of messages that I have to read on here by at least
60%. Now if only we can get some of the gullible people on here to ignore the trolls
we might get back to having a decent newsgroup.

A challenge to all fags and other self-righteous people: WE DARE YOU TO READ THESE SAD LETTERS THAT HONEST FAGS SENT TO WBC.
Unlike the hypocrites of Exodus International and other phony so-called "ex-gays," here's the testimony of honest fags. Unlike money-grubbing heretics like Jerry Falwell and the folks at Focus on the Family who think if they lie often enough about Jesus Christ and can get enough money from enough simpletons, then they can deceive homosexuals into believing they've repented, here are the confessions of sincere fags. As the publican in Luke 18:13 & 14, so is this fag: "And the publican, standing afar off, would not lift up so much as his eyes unto heaven, but smote upon his breast, saying, God be merciful to me a sinner. I tell you, this man went down to his house justified rather than the other: for every one that exalteth himself shall be abased; and he that humbleth himself shall be exalted." His testimony reads as follows:

Testimony 1
"Hi Rev. Phelps, or whoever reads these:

I trapped myself into faggotry when I was 19 years old. While I have to take responsibility for this myself, I can see how our modern American values made it so easy to turn myself into a fag. I can't be the only one who got trapped this way.

In an example of kindness that can kill, society seems to no longer view the sin of sodomy as a sin. Instead, the view now common is that the temptation to commit buggery is an intrinsic immutable personal characteristic, as much as having brown eyes or red hair. Therefore it can't be wrong, so the theory goes.

When I first felt these temptations, I learned not that I was a sinner but that I had 'awakened' to my own sexual identity. I should 'rejoice in this characteristic that makes me the individual I am.' This clever lie not only gave me permission to commit these sins but also indeed put considerable pressure on me to make these acts the mantle of my existence and adopt a life that revolved around the act of buggery. Because after all, to repent and turn from this sin would be 'denying the reality of my identity' and 'only living a lie.'

With the help of an 'understanding' society, I adopted this view. Occasionally I sought help (in the wrong places) for the nagging notion that this was all a horrible, horrible mistake. The apostate clergy of modern psychology told me that my aversion to my 'sexual identity' was wrong, I should let go of my inhibitions and go enjoy the revolving door sex culture of anonymous gay sex.

I reached a depth of despair at my first (and last) 'gay pride' parade. I saw the most revolting attributes of homosexuality flaunted as if they were the hallmark achievements of mankind. Vileness, promiscuity, perversity, and inverted morality (not to mention logic) were all hailed in an orgy of celebration. It was like a bad science fiction horror movie of Hades come to Earth.

As the years passed, it was increasingly more difficult to suppress the growing sense of revulsion I had to those wretched beings with whom I had cast my lot. I left the city every year on the day of the 'gay pride' orgy. I tried to distance myself from the amoral antilogical licentious human garbage that collectively calls itself the 'gay community.'

Currently I still feel the call of this sin, though I no longer act on it. The final chapter of my odyssey of escape from the clever lies of an immutable fag nature is perhaps not yet written. But I pray to God for redemption. I'm not yet sure of the state of my salvation, but if nothing else, I have turned my back on fag sin and all the evil that comes with it.

I used to think you people were evil and crazy and persecuted the righteous. But I am beginning to understand that I have had it exactly backwards."

Testimony 2
"If it's ok with you, I would like you guys to post my story on your site like you did with that other guy. Here is my story below, feel free to correct any spelling. I am not afraid to have my name in there, so feel free to print it.
My name is F**** G*****. I am now 55 and I have AIDS, my reward for a life of faggotry and promiscuity. In my lifetime I have had nearly every venereal disease you could imagine, but none of those could stop me from my life of sin.

I got involved with sodomy at a very young age. My neighbor was an upstanding person in the community. Everyone loved him and his wife. At church he was almost a celebrity. But what I found out that his wife had not, is that he was a faggot, leading a hidden lifestyle. One weekend, my parents thought it would be a good idea for me to go camping with my neighbor while they were out of town. It was a horrible mistake for all of us.

Alone with this pervert in the woods, there was nobody to stop him from exposing me to sodomy and all manners of perversion. Years later, those events damaged my psychological development in high school. I could never maintain a healthy relationship with females. But things got worse in college.

When I was a senior in college, I met a professor that was a faggot. He began telling me that what I was feeling was "normal", and that those who opposed this sort of behavior were neandethals and backward. Soon we were having a relationship. It was then that I had considered myself

gay.

What I want people to know at this point is that the gay lifestyle is not some kind of mirror image of the heterosexual lifestyle. It involves multiple partners, anonymous sex, and many perversions. It seemed that I needed to experience more and more perverted activities to be satisfied. Among the ones I could mention here are pedophilia and beastiality.

So I continued in my life of faggotry, never truly happy. I claimed I was proud of it; I marched in parades and chanted the slogans. But inside I knew there was something wrong. From the first time I called myself gay, I had always turned to drugs to take away the pain of my sin. If I ran out of money for drugs, I thought nothing wrong about going to the nearest rest stop or public restroom, and offering my services to strangers. Nothing the gay movement could tell me could make me happy the way the drugs did. They said that the lifestyle was becoming more accepted, that we were going to be accepted by the country as normal. But I knew I was not normal, and I suspected many others know this too.

Still I was involved in the lifesyle until March 24, 1999. I had in and out of doctors' offices for years, diagnosed and treated for ghonorrea, scabies, and lice. I thought I had hit the bottom when diagnosed with herpes in 1995. But on that day in 1999, I learned that I had tested positive for HIV. The worse thing is that with the lifestyle I was leading, I could not tell you who gave me that virus.

The reason why I am writing this, and using my real name, is because I want everyone to know the truth about his lifestyle. I no longer care about what happens to me. I will be dead soon, and my family disowned me long ago. I am ashamed of what I did to them and god. When I was lying in the hospital bed about a month ago, I learned that what I had done for years was a sin.

Now I felt better knowing that I was right to doubt myself back then. I have repented to the Lord and know that while my sins are now washed clean, my duty in my final months on Earth is to warn the world, especially young males, about the danger of homosexuality.

There is NOTHING normal about it. The media tries to portray faggots as being entertaining, funny, and just like everyone else. But that could not be further from the truth. I know because I have been there. Not a day goes by that I don't regret my sins of the past. If just one afflicted person reads this and changes there ways before having to suffer the pain that I have, then I will consider my holy mission accomplised.

F**** G*****

As long as 1) they aren't using cell phones and 2) they aren't
encrypted, it's legal to listen to them.

Check the number of the discriminator IC for the 2054, then see what chip is being used in the instructions you can find. As long as the chip is the same, the mod is the same - it's just an isolated tap off one pin of the IC. I prefer using a large capacitor coming off the IC (for DC isolation), then a resistor in series and a capacitor to ground (for HF filtering), but either of the usual methods - series resistor, capacitor to ground, or series capacitor, should work pretty well. Just use the recommended values.

Yeah, that's the page I've been using for information. I've programmed in all the local frequencies for the SAFE-T system, but I never actually hear anything. I have the scanner on Search mode, and occasionally it will show a TalkGroup ID and play some loud buzzing noises, but then goes back to being silent for several more minutes. I've never heard any one talk on it.

It seems to identify the control frequency just fine and seems to be doing what it should. It's almost as if no one is using it, but from what I've read, at least the State Police should be on the trunked system now.

PCR Remote - version 0.5.020 Beta is Now Available for downloading from the homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

The Server and Remote software allows you to control your Icom PCR-100, PCR-1000 and PCR-1500 over the internet.
Using Audio Brodcast software such as SHOUTcast, Pirate Radio Broadcaster or Windows Media Encoder will enable you to hear your radio from a remote location over the internet...

Updates:
May 17,2006 - Added: Direct Entry of Frequency using keyboard.
May 17,2006 - Fixed: Entry of Frequency when Double-Clicking Frequency Text.
Version 0.5.020 Released 05/17/2006

Regards,
Jay

Bob,

I've pretty much given up on finding a "master list" on the internet. Try
'airline frequencies' with Google. Is about
as good as I've been able to find.
http://www.freqofnature.com/index.php?m=Aviation%20Monitoring&p=Airline%20Frequencies
has a huge list but it's for CA. Best thing I can recommend is simply doing
a search tween 128.85-132.00 and 136.5-137.0
all 25KCS spacing. You'll eventually come up with your own list and can even
figure out the airport and airline that's using it.

I hear a lot of voice in SE TN so it seems to be the normal mode.

Regards,

SparkS

Well I have it working with both Shoutcast and Windows Media Encoder.

An observation if I may, no flame intended.....

You can remotely tune the receiver as advertised, however it works best as a channleized setup. i.e. Pre programmed channels like a car radio, that one switches stations by pressing a button. Using this method, I have a friend, currently in Egypt, who can listen to the radio station of his choice by pressing the chan button and slecting the channel he wishes to hear. But for real time tuning, the buffering used by both systems, Shoutcast and WME, make it virtually impossible to tune across the spectrum as one would do locally.

It maybe that you could incoropate an audio link in the server/client that does not use buffering. I realize that complicates the whole thing immensely, and that eliminating the buffering amkes the whole thing more subject to the moment ot moment vagarities of the net.

Still a commendable effoert Jay and I do realize it's early days for the project. I anxiously await furhter improvements. Keep up the good work.

State police are all digital. Are you using a digital scanner?

Yep true... Those audio servers do run way too slow for faster frequency
changes, that's why I plan on adding my own internal audio server that will
enable a user to hear changes faster as they happen.
On my test system, I noticed about a 2-3 minute delay using SHOUTcast.
Way too slow for my needs as well...

Another user said that he uses Teamspeak which he states is alot faster...

The Indiana SAFE-T System as well as the Indiana State Police are
digital, if you aren't using a digital scanner then you aren't going to
hear anything on these frequencies.

Still sooking mate?
No loyalty huh? You nothing of it.

If Scan Australia is upset with me for not choosing a side, it's simple. I won't contribute to the site and they won't hear from me again. I have contibuted a hell of alot more than that silly dribble you posted about your battles with Mr.Keeping.

But I think it's you who has your knickers in a twist over my not choosing a side, not Scan Australia. I might be wrong, but I'm pretty sure I won't lose any sleep over it if they are upset with me.

I didn't join Scan Australia to wage Web Site Wars you dumb shit, and should I decide oneday to join Scan Victoria it won't be too play one side off against the other.
It was to share, provide and learn info about the hobby.

All you're doing now is turning the hobby related sites into your own political sounding board and battleground, and in all probability you're doing more damage to the hobby than
what was allegedly done by Mr.Keeping.

You Sir, are a fuckwit.

Watch all the obese BEER BELLY'ed hams waddle on by
in the parking lot flea market at the Hara Arena.

CLICKINZIE HERE: http://wa5kub.com

The camera was in operation today (Friday) and it's
2000% proof positive what the FDA has said all
along about the rampant obesity epidemic in America.
(makes you wonder how many Big-Macs they sell
this weekend especially in and around Dayton)

There is also an OPEN CHAT ROOM on the site where
you can comment on the goings on. Almost as much fun
as being there live.

Trust me folks, you'll see more middle-aged pathetic looking
white men than anywhere else, possibly except being
the local model train show or the next NASCAR event.

Hello:

New at this, and am a bit confused over what are the modes used by the Coast Guard
for the following:

345.0

237.9

326.15

379.05

Are these (all) FM ?

The last two are apparently air to ground, so are they AM ?

If someone could pleasae peg these 4 for me, would be most appreciative.

Thanks,
Bob

Man did you ever call that one right on the head !!

I also watched the HamventionCam today and I
ain't seen so many big beer gutz floppin over the
belt at the waistline since the day I went to the
St Paddy's Day party at the local Am Legion Hall.

You gotta think how those guys manage to
walk upright without falling over face-first
from the offset center-of-gravity Beer Belly.

Oh well, here's to the future of Ham Radio:

PFHBBLTTTTTT!!!!!!!!!!!!!

Agreed. Encrypted and digital are 2 very different things. You'll find that most local government systems that are digital are not encrypted due to the infrastructure cost in making them encryptable. Most of the digital scanners on the market will allow you to hear most of what you want to hear.

True, but I must have counted close to 40 (fourty)
morbidly obese hams seated in those motorized Scooters
that I saw zipping by the HamventionCam today.
Many of them stopped for the camera, got up mugged
4 the camera, then hopped back on and zipped away.
(funniest was the guy pulling a red wagon behind his Scooter
that had a couple of big astron power supplies in it.
Guess he needed one to re-charge the battery ? (grin)

Bob,

Here's a site that has a list of U.S. freq allocations. Though a little old
it will give you a pretty
good idea of the modes and tuning steps between freqs. Also the various freq
bands. As others
told you they are all AM mode. The military aviation (MilAir) band is
225-400 Mhz and is almost
always AM mode.

http://aosc.org/alloc.html

Regards,

SparkS

For the Pro-99 you can use Win99
<http://www.starrsoft.com/software/win99/default.asp>. For the BC350,
it doesn't look as if the scanner has a data port of any sort, so you
can't do what you want. I may be wrong, but Uniden's site doesn't
even list a data cable for the scanner.

Simply back up the directory that the scanner software is installed in,
since there is a very good chance that the program stores it's data in the
same directory, in a file. After all, the program has to retain this data
from one run to the next, you see.

Hi Dan,

Although I don't have an answer for you, I have saved a link to someone
who has the owners manual for $9.

http://www.w7fg.com/manuals.php?manufacturer=Regency&center=

Secondly, this company might be interested in buying it from you. If you
are not interested in selling it, maybe you could call/email them and
ask [nicely! ;-)] if they might know the answer to your problem.

1765. PCR Remote - version 0.5.22 Beta is Now Available

Newsgroup: rec.radio.scanner
Date: 2006-05-24 03:59:10 UTC
From: CrazyC <crazy__c_@hot_mail.com>
Message-ID: <kSQcg.13402$8q.6880@dukeread08>
Source record: 8945

PCR Remote - version 0.5.22 Beta is Now Available for downloading from the homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

The Server and Remote software allows you to control your Icom PCR-100, PCR-1000 and PCR-1500 over the internet.
Using Audio Brodcast software such as SHOUTcast, Pirate Radio Broadcaster or Windows Media Encoder will enable you to hear your radio from a remote location over the internet...

Updates:

May 22,2006 - Added: Reverse DNS to PCR Remote.
Can now enter server name like "mysite.mydns.com".
May 23,2006 - Fixed: Direct Entry of Frequency after using any knobs or menus.
May 23,2006 - Fixed: Maximum Frequency for PCR-1500.
May 23,2006 - Added: Minmimal Support for PCR-2500.
May 23,2006 - Fixed: Entry of Frequency using Keypad could have caused a crash.
Version 0.5.022 Released 05/23/2006

Regards,
Jay

1766. Hillsborough County Florida 800 Mhz system

Newsgroup: rec.radio.scanner
Date: 2006-05-24 04:15:53 UTC
From: Old Ambulance Driver <anon@anonymous.org>
Message-ID: <Z5Rcg.2741$eQ4.1075@tornado.tampabay.rr.com>
Source record: 8946
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I'm not sure if this information has been posted yet as it occurred fairly recently, but here goes:

For those of you who like to listen to the Fire & Rescue traffic from the Hillsborough County Emergency Dispatch Center on the Hillsborough County, Florida Ericsson GE EDACS 800 Mhz system, a change has taken place in how they dispatch calls.

They no longer "simulcast" on the 800 Mhz system and their older VHF frequencies when the main dispatcher (referred to as the "gatekeeper" or the "gate" and often heard being called this by the field unit's) initially dispatches a call for a unit or station to run.

In the near recent past, the "gatekeeper" was heard both on the 800 Mhz EDACS system and their old VHF County Fire Control frequencies (154.130 Mhz for the Eastside stations and 154.175 Mhz for the Westside stations) at the same time, and quite often (except for the very newest stations) were heard paging tones that were used to open up the VHF radio pagers (Motorola, Plectron, etc).

However due to the expense and difficulty in maintaining the VHF transmitter's used to broadcast the VHF radio pagers tones, it was decided to pull the plug on the decades old VHF radio pagers (Motorola, Plectron, etc) and use telephone based pagers that are tied into the EDC computer and when a call is dispatched, a signal is sent to the telephone paging server to broadcast a page to that unit and also a signal is sent to the station to generate a "Tear and Go" or "Grab and Go" printout of the call information that goes with them to the call.

So in a nutshell, there is no longer any VHF traffic to be heard for Hillsborough County Fire & Rescue, just the Ericsson GE EDACS 800 Mhz system, no more pager tones to alert scanner listeners that a call is going out, instead the "gatekeeper" announces "Emergency Call" or "Non Emergency Call" (as the case might be) and then gives out the call information once.

There is one "old timer" dispatcher there who has a real deep voice who likes to pretend he is AOL with mail, as in "Emergency Call", I think he does it just to pass the time and amuse himself, but it gets your attention, listen out for him sometimes, he never seems to get excited about anything, but just sounds tired all of the time, (somebody told me that he's been there almost 30 years!)

When the unit's respond they respond on their appropriate frequency (TAC 1 for East and South stations and TAC 2 for North and West stations) and when the Rescue Ambulances come available from the hospital (or scene if no pick

up), they come available on the "gatekeeper" main dispatcher (the Engines do this on the TAC frequencies), this seems to have something to do with zoning as the Rescue Ambulances are moved around more often than the Engines to cover empty areas of coverage.

Hope this information is useful to both old timers and newcomers to the field of radio scanning.

"Old Ambulance Guy"

Jay - I looked at your previous beta, and I was quite impressed. The problem is, I'm an idiot when it comes to setting up remote audio streaming. Is there any simplified guide you could point out that would get me started -- preferably something that doesn't involve going through a 're-distribution' server, but just direct pc to pc? Thanks!
[please respond via this group]

To set up a SHOUTcast server you need to download and install 3 files.
1) Winamp music (Basic) player Bundle:
http://www.winamp.com/player/free.php
2) Download the SHOUTcast DSP Plug-In for Winamp 5.x.
http://www.shoutcast.com/download/broadcast.phtml
3) Shoutcast server.
http://www.shoutcast.com/download/serve.phtml

The shoutcast server page tells more about installing and configuring.
It's really easy to set-up and configure...
Jay

Dan,

Try this:

1. Press MANUAL

2. Press keys corresponding to desired frequency and
then the ENTER key.

3. Press keys corresponding to desired channel number
for this frequency (use 0 to preceed single digit channel
numbers).

4. Repeat steps 2 and 3 for entering another frequency
in another channel.

5. If a non-allowed frequency is entered the display will show Fr Err.

Can someone please explain the major differences between simplex, half duplex, full duplex, etc. ?

What is there inherent in the theory that prevents two way conversation, like on a phone line, in the simplex mode (such as in maritime VHF/fm ship to shore conversations) ?

Thanks,
Bob

1774. Re: Questions On Simplex, Duplex, etc.

Newsgroup: rec.radio.scanner
Date: 2006-05-24 23:26:03 UTC
From: mikeFNB <mikefnb@moc.dlrowltn>
Message-ID: <fY5dg.4403$XR6.3470@newsfe2-gui.ntli.net>
Source record: 8804

the inherent theory is one of simple logic really:

Simplex involves only one freq, either party can use it but it is like a game of ping-ping
only one can transmit [TX] at the same time, the other must listen [RX].

Half-Duplex or more correctly: Split, involves two freqs, but again they cannot be used at the same time
one station can only TX whilst the other must RX. [but talk-through can be enabled by a remote base station].

Full Duplex is like a phone conversation, two freqs, both parties can RX & TX at the same time.

sadly, these terms are often misinterpreted or used to describe radio systems incorrectly.
esp in scanner listings!

I looked at shoutcast, but doesn't that require using their service? Or
am I misunderstanding it?

I'd really like to setup just direct pc-pc access [I'm not sure I'd even
ever use it outside my home network -- just pc to pc].

Thanks!

Winamp with the Oddcast plugin and Icecast are free, simple to set up
and you don't need anything else.

Bob,

As a retired USN radioman I'd like to take a stab at this. If the few remaining grey matter cells will
cooperate. I didn't read the Wiki article, I'll do that next to see if it's correct. GGGGGGGG

Simlex is a one way only circuit. Like a fleet broadcast. Or a TV or Am/FM radio station. It uses a single freq.
One side transmits and if all goes well the other side is able to copy what's being sent. It's not always necessary
to have two way comms. Cable TV used to be basically a simplex ckt but know there's all sorts of Buck Rogers
stuff out like interactive cable.

Duplex is silmultaneous comms both ways. It requires two separate freqs, one for send the other for receive.
A ship shore RTTY circuit on HF is an example. Each side can be "talking" to the other side using a TTY machine.
(Okay so TTY machines went out with the buggy whip. It's still a valid concept.)

Half Duplex is as the name suggests nothing but back and forth comms on a single freq but NOT at the same time.
Two way radios are a good example. One side talks and other listens and then the other side talks and the first side listens.

Have you ever tried to talk on a phone while the other person is talking? Sure, but it doesn't work because you
both end up talking on top of each other. So yes it's 'possible' for both sides to talk at the same time but this is not
a very good solution if the idea is to communicate. When you get into AM modulated voice when you combine two
voice freqs the two freqs actually add and at the same time subtract from each other. I realize that may not make
sense but I don't want to get too technical. Am sure Wiki can and has done a much better job that I can.

Before everyone jumps all over me I'm talking about very basic ideas and not any of the more modern modes
like cell fones and digital and trunking radio systems and satellite etc etc etc. As someone once said "the times they
are a changin'" but no matter how marvelous things get the basics will always remain the same.

Regards,

SparkS

I retired this scanner a long time ago. Nonetheless, I remember that such
"FR ERROR" used to happen when the batteries where under 6 volts. The only
way to be able to tune the Regency back into its range was to change the
batteries or switch into the AC power supply.

I am not sure this is your case, it was mine many times over and over.

Cheers from sunny Italy,

Optoelectronics Xplorer Test Receiver.
Which is a handheld , rechargable unit that does it all.
Sweeps range of 30mhz to 2ghz in less than 1 second, and allows you to
listen to automatically demodulated audio on built in speaker.
It will decode and display Deviation, CTCSS, DCS, and DTMF in addition
to frequency display.
Can be interfaced with any compatible NMEA-0183 GPS type receiver.
Has built in computer interface with cable.
It is in excellent condition, and comes with: case, charger, antenna,
and box.
Asking $400 or reasonable offer

Hi,

Anyone know if these two acars decoder programs will decode HF acars:

acarsd

Wacars

Also, when and where is HF acars used as compared to the more common, I think, VHF acars ?

Thanks,
Bob

If the system in question is an APCO P-25 system then encryption is built
into the system. All they need to do is program all radios with a Key.
As far as I know P-25 cant exchange keys over the air, a flay in my
opinion.

Before there was Japan, Inc., there was UPI - we used to "rip & read"
the teletype news -rip it off the printer about 300 ms before air time
and try not to pant as we started reading. (Reminds me of an incident
in which someone lit the bottom end of a rip while the newscaster,
standing, was reading down from the top.)

P25 is *NOT* inherently encrypted. It can be, the provision is there
in the spec, but many P25 systems are bought without the (relatively
expensive) encryption modules.

Go to the database at Radio Reference
<http://www.radioreference.com/modules.php?name=RR> and see how many
P25 systems have talkgroups listed as D, not E.

This is wrong. The radio need an encryption module and/or an expensive
software option to enable encryption.

1799. Use "Tape Out" Or "Ext Speaker" Output For PC's Line-In ? And, acars question

Newsgroup: rec.radio.scanner
Date: 2006-05-30 10:44:36 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <y5ednYw_bfaJv-HZRVn-vA@comcast.com>
Source record: 8829

Hello:

Have a 780.

Have never played with this, so would appreciate some help, very much.
Still consider myself a newbie with the 780, and scanning in general.

I wish to decode some aero acars messages with my PC.
Therefore, I have to set my 780 to 131.550 AM and feed the output into
the Line-In on my PC's soundcard.

Not sure what to grab from the radio to do this.

Should I use the Ext Speaker jack, or the Tape Out ? Or,... ?

BTW:

What are the differences in output volt levels, etc. for the two ?

Anyone try scanning a few (e.g., 6) acars freq's., and rely on the Squelch
being fast enough to grab the full message if one does appear on on of these
scanned channels ?

Thanks,
B.

1800. Hand-Held "Equiv." To 996 ?

Hello:

Is there an "equivalent" hand-held unit to the 996 ?

If so, what might be, please, the major differences (other than gps
which I have no use for) ?

When did it come out ?
If not, do you think any is contemplated by Uniden in the near future ?

Thanks,
B.

>BTW:

>What are the differences in output volt levels, etc. for the two ?

Ext. Speaker is variable with the volume control, tape out is
constant. If you use tape out you can turn the volume all the way
down. They're both line level.

The 396 is the closest at the moment. Uniden doesn't make base
equivalents of portables or portable equivalents of base/mobile units,
so I doubt we'll be seeing a "996 portable" for a while.

I would use the tape-out.

> Anyone try scanning a few (e.g., 6) acars freq's., and rely on the Squelch
> being fast enough to grab the full message if one does appear on on of
> these scanned channels ?

I have tried that in the past, but that would require all signals having the
same strength. I recomend using only the primary freq(s) since the scanner
mostly stops at those.

Talk to you later ... Hans

found this old Realistic Pro-45 "beast" of a scanner and it amazingly works.
it's an eight channel scanner that uses crystals.

currently a local 2-meter repeater is the only active frequency in my area.

can somebody help get or sell me some crystals and/or the manual for this
radio?

the crystals i'm looking for are:

148.525mhz
150.100mhz
154.935mhz
154.620mhz
156.800mhz
162.400mhz

please reply by email.

thanks!

1813. Fair Price For A 780 ?

Newsgroup: rec.radio.scanner
Date: 2006-06-01 15:01:16 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <9eOdnRyuyeemnOLZRVn-qA@comcast.com>
Source record: 8843

Hi,

A bit too old now to start to learn about using eBay.

Have a 780 in mint condition.

No idea what these things are worth anymore.

Will probably by a new 996, once I can convince the wife.

Any idea what a fair asking price for a 780 would be these days ?

Live outside of Boston.

Thanks,
B.

well not being all that into model numbers you might try saying a bit
more about it then I could at least answer you

Not even trying to play "price police" but that is pretty good considering I paid $300 for mine new. $25 depreciation is good. Wish my Z only depreciated that little...

I have a Realistic Pro-2004 Scanner that has decided to start clearing it's memory. It's happened twice in the span of a week. I have three scanners and have never had a problem...ever. I'm completely confused.

Is this fixable? Common? If anyone has any suggestions I would really appreciate it. Thanks in advance.

Sherry

Delta IV Launch Photos now online. On May 24, 2006 I was at my favorite viewing spot for rocket launches and took some photos of the Delta IV caring a GEOS-N satellite into orbit.

As with all shuttle & rocket launches it makes for a great on-scene scanning opportunity. A lot of interesting comms!

You can go directly to my photo gallery here:
http://www.milaircomms.com/gallery.html

Also have new photos of my recently remodeled shack at:
http://www.milaircomms.com/gallery.html

Enjoy,
George

Gommert may not support running it on 64 bit Windows (he doesn't
"support" using a USB->serial adapter, but his programs run just fine
on them), but I haven't found a 32 bit program that won't run on it.

Bay County listings with a link to the state system:
<http://www.radioreference.com/modules.php?name=RR&ctid=318>

>One more thing.......what kind of digital system does the FHP use?

They're switching to MA/Com, and there's no scanner that will track
that.

1840. FS: Realistic Pro 2004 Wide Coverage Scanner - Price Reduction

Newsgroup: rec.radio.scanner
Date: 2006-06-07 10:04:08 UTC
From: Dan <dschopp@yahoo.com>
Message-ID: <1149674648.552407.319250@y43g2000cwc.googlegroups.com>
Source record: 8870
Cross-posted to: rec.radio.swap,rec.radio.scanner

This 300 channel, wide coverage scanner is in excellent condition.
Backlight has dimmed but is still visibile. Scanner receives wide FM,
narrow FM, and AM - CB radio and aircraft. It does not receive AM
broadcast band but does receive FM broadcast stations and tv audio. The

mod for full 800 mHz converage has been done. Coverage also includes
the military air band.

Scanner comes in original box with telescoping antenna and partial copy

of the owners manual.

$100 or best offer- Price includes USPS Priority Mail or UPS ground
shipping within
continental US. Will not ship outiside continental US.

Included with the scanner is a MFJ Clear Tone communications speaker.
Speaker is a nice substitute for the internal speaker.

1842. Communications Electronics / usascan : Thoughts On ?

Hello:

Regarding: Communications Electronics / usascan.com

Have never dealt with these folks before.

Any thoughts regarding how ethical, reliable, etc. would be most
appreciated.

They seem to be the cheapest for a 996, which I am thinking of purchasing.

Thanks,
Bob

1843. Tacoma WA Police frequencies ???

Newsgroup: rec.radio.scanner
Date: 2006-06-07 15:53:08 UTC
From: Alex Clayton <alexx1400@yahoo.com>
Message-ID: <1149695587.954491@bubbleator.drizzle.com>
Source record: 8873
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The Tacoma PD has recently changed their radios. Used to be able to listen to the dispatch and a couple of the Tac channels and records channel. I heard them for days having all their radios re done. Now all that comes through is just the dispatch none of the Tac. They have had several encrypted channels since they went to the 800 system. I have been wondering if they changed everything but dispatch to the encrypted, or if it's something else. Have not been able to find any info. The Radio Reference which was a ton of help when they went to the trunked, is way behind the last few changes, so what they show now is completely wrong . Anyone have any knowledge of what is going on here now?
Thanks.

Of course their info is just what people like you report so when you
tell them what the changes are, they'll be up to date.

>You are likely referring to the monitor antennas- these operate as a
>discone from perhaps 120MHz and up. Below this they are nothing more than a
>ground plane (thus the vertical whip attached to the disc).
A discone at CB would have a disc approx. 7' in diameter and a cone section
with 9' sides and a 9' diameter at the base of the cone. It would have no
advantage over a simple ground plane as bandwidth is not a concern for CB.

and as you can tell, some were forged, and some were placed there in an attempt to cause harm (which backfired on the people involved).

as for this forger, he's so much the coward that he won't post under his real identity and always from an anon mail2news gateway. what is he so afraid of, I ask. is it perhaps that his own closet has more than its fair share of skeletons?

He chooses me because he *THINKS* I am a convenient target (just like Tim Hoffman thought and look what that got him - a $10,000 fine and a record).

I leave it to the rest of you to consider the source (such as it is).

I have used them a couple times, and it was great. It has been a while,
about a year. When I decided to get a 246 I bought mine from them because
the price they offered included shipping. When I was shopping around they
were within a couple bucks of everyone else I could find, and they had been
recommended. After I got mine, others I work with tried them for the same
scanner, had the same results. Place your order, within less than an hour
got the tracking#, and scanner got here on the west coast in less than a
week.

I would think you could get $250 or more for a mint 780. It's a great
scanner. It depends on what use the potential buyer might have for it
whether rebanding will hurt.

I bought a used 780 earlier this year for $240 and I use it every day.
Rebanding will affect me though.

Why don't you go ahead and advertise it on rec.radio.swap? You can
start a little high and you can always come down.

Greg

Dear sir:

The FCC has been dumbing down ham radio for several years now. This has hurt the integrity of the service and is bad for America. They are planning to dumb it down again really soon now and their plan will make ham radio like CB and it will be bad for America. We already have one CB service, we don't need two. Please pressure the FCC to endorse the following items for the good of the service and County.
God bless America.

Signed
(Your name & callsign)

No more automatic renewals. Individuals must retest and pass all elements required for their license class.

The passing score for written exams needs to be raised to 85%.

Code elements should be 13 wpm for General, and 20 wpm for Extra.

Make the no-code license one year non-renewable.

this is the only point he is right on.
when I took my test, some math was still required (along with knowing where
you were legally allowed, etc.).

I have had chance to read the latest offerings in the test pool.

I'd like to see them bring back the math problems (antenna theory, ohms law
and the like).

Interesting to note that "Slow Code" and "Radio Buff", in addition to having apparently-identical agendas about rolling back FCC standards into the 1950s or before, both access the Internet via Level3 dialups in Denver.

Also interesting to note that the poster going by the handle of "New ham", who asked a rather inane question about a capacitance hat for his antennas (but who has no other posting history at Google), accesses the Internet via a Level3 dialup in Denver.

Possibly it's something in the water up there. Perhaps those three gentlemen ought to form a new ham club in Denver? That's enough members to qualify for a club-station license.

Then you fail to recruit new blood into the hobbie. Certainly they should have restrictions, but you need to have a no-code ticket available, otherwise why leave 11 meters. I do not want to learn the code, I have no interest in learning the code, I never plan to use code, but someday I may change my mind, and when that day comes I can test and move up in class. But if you stop people at the front gate, don't expect them to return.

>Then you fail to recruit new blood into the hobbie.

We recruited more new blood into the "hobbie" when the Novice required
code (if you can't learn 5wpm, there's no way you could learn enough
theory to pass the old exams - and there's more theory to know these
days) AND one year non-renewable than we do now. There are reasons
there's less new blood, but code isn't one of them.

>Certainly they should have restrictions, but you need to have a no-code ticket available,
>otherwise why leave 11 meters.

Good question. Ask those who did back in the early 60s - when code
was required. Maybe just listening to 11 meters, then listening to 20
meters, is reason enough.

> I do not want to learn the code, I have no
>interest in learning the code, I never plan to use code, but someday I may

Since tens of thousands of hams "returned" when code was required,
your basic premise is wrong. *You* wouldn't return if code were
required, but you aren't everyman. (Try the old General as the "entry
level" exam, 13 wpm and pretty stiff theory, with the only upgrade
being the Class A ticket. And yet, many many hams went that route.)

I personally don't think it's a battery problem because my memory got wiped overnight while the radio was turned on and connected to a fully charged 20 A-hr battery. Since the circuits were energized, it shouldn't be relying on a battery or cap.

I've emailed Uniden support but haven't heard from them yet.

I'll keep the group informed of what happens.
